GEOMETRY
About *Geometry*

In *Geometry*, you will develop reasoning and problem solving skills as you study topics such as congruence and similarity, and apply properties of lines, triangles, quadrilaterals, and circles. You will also develop problem solving skills by using length, perimeter, area, circumference, surface area, and volume to solve real-world problems.

In addition to its geometry content, *Geometry* includes numerous examples and exercises involving algebra, data analysis, and probability. These math topics often appear on standardized tests, so maintaining your familiarity with them is important. To help you prepare for standardized tests, *Geometry* provides instruction and practice on standardized test questions in a variety of formats—multiple choice, short response, extended response, and so on. Technology support for both learning geometry and preparing for standardized tests is available at classzone.com.
About the Authors

Ron Larson is a professor of mathematics at Penn State University at Erie, where he has taught since receiving his Ph.D. in mathematics from the University of Colorado. Dr. Larson is well known as the author of a comprehensive program for mathematics that spans middle school, high school, and college courses. Dr. Larson's numerous professional activities keep him in constant touch with the needs of teachers and supervisors. He closely follows developments in mathematics standards and assessment.

Laurie Boswell is a mathematics teacher at The Riverside School in Lyndonville, Vermont, and has taught mathematics at all levels, elementary through college. A recipient of the Presidential Award for Excellence in Mathematics Teaching, she was also a Tandy Technology Scholar. She served on the NCTM Board of Directors (2002–2005), and she speaks frequently at regional and national conferences on topics related to instructional strategies and course content.

Timothy D. Kanold is the superintendent of Adlai E. Stevenson High School District 125 in Lincolnshire, Illinois. Dr. Kanold served as a teacher and director of mathematics for 17 years prior to becoming superintendent. He is the recipient of the Presidential Award for Excellence in Mathematics and Science Teaching, and a past president of the Council for Presidential Awardees in Mathematics. Dr. Kanold is a frequent speaker at national and international mathematics meetings.

Lee Stiff is a professor of mathematics education in the College of Education and Psychology of North Carolina State University at Raleigh and has taught mathematics at the high school and middle school levels. He served on the NCTM Board of Directors and was elected President of NCTM for the years 2000–2002. He is a recipient of the W. W. Rankin Award for Excellence in Mathematics Education presented by the North Carolina Council of Teachers of Mathematics.

Chapter 1

Unit 1
Points, Lines, and Planes

Essentials of Geometry

Prerequisite Skills ............................................................. xxii

1.1 Identify Points, Lines, and Planes ........................................ 2
1.2 Use Segments and Congruence ........................................... 9
1.3 Use Midpoint and Distance Formulas ................................. 15

Mixed Review of Problem Solving ........................................ 23

1.4 Measure and Classify Angles ............................................. 24

Investigating Geometry Construction:
Copy and Bisect Segments and Angles ....................... 33

1.5 Describe Angle Pair Relationships ................................... 35

1.6 Classify Polygons ............................................................ 42

1.7 Find Perimeter, Circumference, and Area ......................... 49

Investigating Geometry Activity: Investigate Perimeter and Area 48

Problem Solving Workshop ............................................... 57

Mixed Review of Problem Solving ..................................... 58

ASSESSMENT

Quizzes .............................................................................. 22, 41, 56
Chapter Summary and Review ............................................ 59
Chapter Test ......................................................................... 64
Algebra Review: Solve Linear Equations and Word Problems 65
★ Standardized Test Preparation and Practice ..................... 66

Activities ................................................................. 1, 3, 14, 21, 25, 43, 52

Chapter 1 Highlights

PROBLEM SOLVING

• Mixed Review of Problem Solving, 23, 58
• Multiple Representations, 41, 55, 57
• Multi-Step Problems, 8, 14, 23, 46, 54, 55, 58
• Using Alternative Methods, 57
• Real-World Problem Solving Examples, 10, 15, 27, 36, 44, 51, 65

★ ASSESSMENT

• Standardized Test Practice Examples, 18, 50
• Multiple Choice, 6, 13, 20, 29, 39, 44, 46, 53
• Short Response/Extended Response, 7, 12, 14, 20, 22, 23, 30, 32, 40, 47, 54, 55, 58, 66
• Writing/Open-Ended, 5, 12, 19, 23, 28, 38, 44, 52, 58

TECHNOLOGY

At classzone.com:
• Animated Geometry, 1, 3, 14, 21, 25, 43, 52
• @Home Tutor, xxii, 7, 13, 21, 31, 40, 46, 48, 54, 60
• Online Quiz, 8, 14, 22, 32, 41, 47, 56
• Animated Algebra (Algebra Review), 65
• State Test Practice, 23, 58, 69
# Reasoning and Proof

## Prerequisite Skills

- Use Inductive Reasoning .......................................................... 72
- Analyze Conditional Statements ........................................... 79
- Apply Deductive Reasoning ..................................................... 87
- Use Postulates and Diagrams ................................................... 96
- Reason Using Properties from Algebra .................................... 105
- Prove Statements about Segments and Angles ......................... 112
- Prove Angle Pair Relationships .............................................. 124

## Mixed Review of Problem Solving

- Mixed Review of Problem Solving ............................................. 103
- Investigating Geometry Activity: Logic Puzzles ......................... 86
- Investigating Geometry Activity: Justify a Number Trick ............. 104
- Investigating Geometry Activity: Angles and Intersecting Lines .... 122

## Assessment

- Quizzes ............................................................................ 93, 111, 131
- Chapter Summary and Review ............................................. 133
- Chapter Test ........................................................................ 138
- Algebra Review: Simplify Rational and Radical Expressions ...... 139
- Standardized Test Preparation and Practice .............................. 140

## Activities

- 71, 72, 81, 88, 97, 106, 119, 125

---

**Chapter 2 Highlights**

**Problem Solving**
- Mixed Review of Problem Solving, 103, 132
- Multiple Representations, 77, 111, 120
- Multi-Step Problems, 85, 102, 103, 110, 119, 130, 132
- Using Alternative Methods, 120
- Real-World Problem Solving Examples, 74, 89, 106, 115

**Assessment**
- Standardized Test Practice Examples, 74, 127
- Multiple Choice, 75, 76, 83, 90, 99, 100, 109, 116, 128
- Short Response/Extended Response, 76, 78, 84, 92, 101, 102, 103, 110, 117, 119, 128, 130, 132, 140

**Technology**
- Animated Geometry, 71, 72, 81, 88, 97, 106, 119, 125
- @Home Tutor, 70, 77, 84, 91, 101, 110, 118, 123, 129, 134
- Online Quiz, 78, 85, 93, 102, 111, 119, 131
- Animated Algebra, 139
- State Test Practice, 103, 132, 143
# Parallel and Perpendicular Lines

## Prerequisite Skills

### 3.1 Identify Pairs of Lines and Angles

- Investigating Geometry Activity: Draw and Interpret Lines

### 3.2 Use Parallel Lines and Transversals

- Investigating Geometry Activity: Parallel Lines and Angles

### 3.3 Prove Lines are Parallel

- Mixed Review of Problem Solving

### 3.4 Find and Use Slopes of Lines

- Investigate Slopes

### 3.5 Write and Graph Equations of Lines

- Problem Solving Workshop

### 3.6 Prove Theorems about Perpendicular Lines

- Mixed Review of Problem Solving

## ASSESSMENT

- Quizzes: 160, 178, 197
- Chapter Summary and Review: 201
- Chapter Test: 206
- Algebra Review: Graph and Solve Linear Inequalities: 207
- ★ Standardized Test Preparation and Practice: 208
- Cumulative Review, Chapters 1–3: 212

**Chapter 3 Highlights**

### PROBLEM SOLVING

- Mixed Review of Problem Solving, 170, 200
- Multiple Representations, 174, 177, 188
- Multi-Step Problems, 166, 168, 170, 177, 186, 200
- Using Alternative Methods, 188
- Real-World Problem Solving Examples, 148, 156, 162, 164, 174, 182, 183, 193, 207

### ASSESSMENT

- Standardized Test Practice Example, 173
- Multiple Choice, 151, 157, 158, 166, 176, 184, 185, 195, 208
- Short Response/Extended Response, 152, 158, 159, 166, 168, 169, 170, 176, 178, 187, 194, 196, 200
- Writing/Open-Ended, 150, 151, 157, 165, 170, 175, 184, 195, 200

### TECHNOLOGY

- At classzone.com:
  - Animated Geometry: 145, 148, 155, 163, 174, 181
  - @Home Tutor, 144, 151, 153, 159, 167, 176, 179, 186, 196, 202
  - Online Quiz, 152, 160, 169, 178, 187, 197
  - Animated Algebra, 207
  - State Test Practice, 170, 200, 211
CONGRUENT TRIANGLES

PREREQUISITE SKILLS ................................................................. 214

4.1 Apply Triangle Sum Properties ................................................. 217
   Investigating Geometry Activity: Angle Sums in Triangles ........ 216

4.2 Apply Congruence and Triangles ............................................. 225
   Problem Solving Workshop .................................................. 232

4.3 Prove Triangles Congruent by SSS ........................................... 234
   Investigating Geometry Activity: Investigate Congruent Figures ... 233

4.4 Prove Triangles Congruent by SAS and HL ............................. 240
   Technology Activity Investigate Triangles and Congruence ........ 247
   Mixed Review of Problem Solving ......................................... 248

4.5 Prove Triangles Congruent by ASA and AAS ......................... 249

4.6 Use Congruent Triangles ..................................................... 256

4.7 Use Isosceles and Equilateral Triangles .................................. 264

4.8 Perform Congruence Transformations .................................... 272
   Investigating Geometry Activity: Investigate Slides and Flips ... 271
   Mixed Review of Problem Solving ......................................... 280

ASSESSMENT

Quizzes ......................................................................................... 239, 263, 279
Chapter Summary and Review .................................................. 281
Chapter Test .................................................................................. 286
Algebra Review: Solve Inequalities and Absolute Value Equations ... 287
   ★ Standardized Test Preparation and Practice .......................... 288

Chapter 4 Highlights

Chapter 4 Highlights

Indirect Measurement, p. 257
\[ \triangle MLK \cong \triangle MPN \]

PROBLEM SOLVING

- Mixed Review of Problem Solving, 248, 280
- Multiple Representations, 232
- Multi-Step Problems, 223, 231, 248, 269, 280
- Using Alternative Methods, 232
- Real-World Problem Solving Examples, 220, 226, 236, 242, 251, 257, 266, 274

ASSESSMENT

- Standardized Test Practice Examples, 235, 251
- Multiple Choice, 222, 223, 229, 237, 243, 246, 253, 260, 261, 268, 279, 288
- Short Response/Extended Response, 221, 224, 230, 231, 238, 248, 253, 254, 262, 267, 268, 270, 278, 280
- Writing/Open-Ended, 221, 228, 229, 230, 243, 244, 248, 252, 259, 267, 276, 277, 278, 280

TECHNOLOGY

Contents xi
Relationships within Triangles

**Prerequisite Skills**

5.1 Midsegment Theorem and Coordinate Proof ........................................ 295
   Investigating Geometry Activity: Investigate Segments in Triangles ........ 294
   Problem Solving Workshop ................................................................. 302
5.2 Use Perpendicular Bisectors .............................................................. 303
5.3 Use Angle Bisectors of Triangles ...................................................... 310
   Mixed Review of Problem Solving ..................................................... 317
5.4 Use Medians and Altitudes ................................................................. 319
   Investigating Geometry Activity: Intersecting Medians ..................... 318
   Technology Activity Investigate Points of Concurrency .................... 326
5.5 Use Inequalities in a Triangle .............................................................. 328
5.6 Inequalities in Two Triangles and Indirect Proof ................................ 335
   Mixed Review of Problem Solving ..................................................... 342

**ASSESSMENT**

Quizzes ................................................................................................... 309, 325, 341
Chapter Summary and Review ............................................................... 343
Chapter Test ............................................................................................ 348
Algebra Review: Use Ratios and Percent of Change .............................. 349
★ Standardized Test Preparation and Practice ....................................... 350

Chapter 5 Highlights

**PROBLEM SOLVING**

- Mixed Review of Problem Solving, 317, 342
- Multiple Representations, 302
- Multi-Step Problems, 301, 317, 342
- Using Alternative Methods, 302
- Real-World Problem Solving Examples, 295, 305, 311, 329, 336, 349

**ASSESSMENT**

- Standardized Test Practice Examples, 320, 329

CHAPTER 7
Unit 3
Figures in the Plane

Right Triangles and Trigonometry

Prerequisite Skills .......................................................................................................................... 430

7.1 Apply the Pythagorean Theorem ................................................................................................. 433
   Investigating Geometry Activity: Pythagorean Theorem ............................................................ 432

7.2 Use the Converse of the Pythagorean Theorem ........................................................................... 441
   Investigating Geometry Activity: Converse of the Pythagorean Theorem ................................ 440

7.3 Use Similar Right Triangles.......................................................................................................... 449
   Investigating Geometry Activity: Similar Right Triangles .......................................................... 448

7.4 Special Right Triangles ............................................................................................................... 457
   Mixed Review of Problem Solving ............................................................................................... 465

7.5 Apply the Tangent Ratio ............................................................................................................ 466

7.6 Apply the Sine and Cosine Ratios ............................................................................................... 473
   Problem Solving Workshop ........................................................................................................ 481

7.7 Solve Right Triangles .................................................................................................................. 483
   Mixed Review of Problem Solving ............................................................................................... 492

ASSESSMENT
Quizzes ............................................................................................................................................ 447, 464, 489
Chapter Summary and Review ........................................................................................................ 493
Chapter Test ..................................................................................................................................... 498
Algebra Review: Graph and Solve Quadratic Equations ...................................................................... 499
★ Standardized Test Preparation and Practice ................................................................................ 500

Chapter 7 Highlights

Activities ........................................ 431, 434, 442, 450, 460, 462, 475

PROBLEM SOLVING
• Mixed Review of Problem Solving, 465, 492
• Multiple Representations, 439, 480, 481, 488
• Multi-Step Problems, 438, 445, 456, 463, 465, 471, 479, 488, 492
• Using Alternative Methods, 481
• Real-World Problem Solving Examples, 434, 443, 450, 452, 459, 460, 468, 474, 475, 476, 485

★ ASSESSMENT
• Standardized Test Practice Examples, 434, 458
• Multiple Choice, 437, 438, 444, 454, 461, 462, 470, 478, 486, 487, 500

At classzone.com:
• Animated Geometry, 431, 434, 442, 450, 460, 462, 475
• @Home Tutor, 430, 438, 440, 445, 455, 463, 471, 479, 487, 494
• Online Quiz, 439, 447, 456, 464, 472, 480, 489
• Animated Algebra, 499
• State Test Practice, 465, 492, 503
# Quadrilaterals

## Prerequisite Skills

- Mixed Review of Problem Solving, 532, 558
- Multiple Representations, 513, 530
- Multi-Step Problems, 512, 532, 539, 556, 558
- Using Alternative Methods, 530
- Real-World Problem Solving Examples, 510, 517, 523, 524, 536, 543, 545

## 8.1 Find Angle Measures in Polygons

- Investigating Geometry Activity: Investigate Angle Sums in Polygons 506

## 8.2 Use Properties of Parallelograms

- Investigating Geometry Activity: Investigate Parallelograms 514

## 8.3 Show that a Quadrilateral is a Parallelogram

- Problem Solving Workshop 530
- Mixed Review of Problem Solving 532

## 8.4 Properties of Rhombuses, Rectangles, and Squares

## 8.5 Use Properties of Trapezoids and Kites

- Investigating Geometry Activity: Midsegment of a Trapezoid 541

## 8.6 Identify Special Quadrilaterals

- Mixed Review of Problem Solving 558

## ASSESSMENT

- Quizzes 521, 540, 557
- Chapter Summary and Review 559
- Chapter Test 564
- Algebra Review: Graph Nonlinear Functions 565
- ★ Standardized Test Preparation and Practice 566

## TECHNOLOGY

- Animated Geometry 505, 509, 519, 527, 535, 545, 551, 553
- Animated Algebra 565
- State Test Practice 532, 558, 569

## Chapter 8 Highlights

- Polygon Angle Sum, p. 512 \((n - 2) \cdot 180^\circ\)
Properties of Transformations

Prerequisite Skills ......................................................................................................................... 570

9.1 Translate Figures and Use Vectors ............................................................................................. 572
9.2 Use Properties of Matrices ....................................................................................................... 580
9.3 Perform Reflections
   Investigating Geometry Activity: Reflections in the Plane .......................................................... 588
   Mixed Review of Problem Solving ............................................................................................... 597
9.4 Perform Rotations
   Problem Solving Workshop ........................................................................................................... 598
9.5 Apply Compositions of Transformations
   Investigating Geometry Activity: Double Reflections .................................................................... 607
9.6 Identify Symmetry ....................................................................................................................... 619
9.7 Identify and Perform Dilations
   Investigating Geometry Activity: Investigate Dilations ............................................................... 625
   Technology Activity Compositions with Dilations ....................................................................... 633
   Mixed Review of Problem Solving ............................................................................................... 634

ASSessment
Quizzes .............................................................................................................................................. 587, 615, 632
Chapter Summary and Review ......................................................................................................... 635
Chapter Test ..................................................................................................................................... 640

Using Your Textbook

Your textbook contains many resources that you can use for reference when you are studying or doing your homework.

**IN EVERY CHAPTER**

**BIG IDEAS** The second page of every chapter includes a list of important ideas developed in the chapter. More information about these ideas appears in the Chapter Summary page at the end of the chapter.

**POSTULATES AND THEOREMS** The Postulate and Theorem notebook displays present geometric properties you will use in reasoning about figures. You may want to copy these statements into your notes.

**KEY CONCEPTS** The Key Concept notebook displays present main ideas of the lesson. You may want to copy these ideas into your notes.

**VOCABULARY** New words and review words are listed in a column on the first page of every lesson. Vocabulary terms appear highlighted and in bold print within the lesson. A list of vocabulary appears in the Chapter Review at the end of each chapter.

**MIXED REVIEW** Every lesson ends with Mixed Review exercises. These exercises help you review earlier lessons and include exercises to prepare you for the next lesson. Page references with the exercises point you to the lessons being reviewed.

**STUDENT RESOURCES AT THE BACK OF THE BOOK**

- **SKILLS REVIEW HANDBOOK** Use the Skills Review Handbook topics on pages 869–895 to review material learned in previous courses.
- **EXTRA PRACTICE** Use the Extra Practice on pages 896–919 for more exercises or to review a chapter before a test.
- **TABLES** Refer to the tables on pages 920–925 for information about mathematical symbols, measures, formulas, squares, and trigonometric ratios.
- **POSTULATES AND THEOREMS** Refer to pages 926–931 for a complete list of all postulates and theorems presented in the book.
- **ADDITIONAL PROOFS** Refer to pages 932–938 for longer proofs of some of the theorems presented in the book.
- **GLOSSARY** Use the English–Spanish Glossary on pages 939–980 to see definitions in English and Spanish, as well as examples illustrating vocabulary.
- **INDEX** Look up items in the alphabetical Index on pages 981–1000 to find where a particular math topic is covered in the book.
- **WORKED-OUT SOLUTIONS** In each lesson, exercises identified by a red circle have complete worked-out solutions starting on page WS1. These provide a model for what a full solution should include.
- **SELECTED ANSWERS** Use the Selected Answers starting on page SA1 to check your work.
In previous courses, you learned the following skills, which you'll use in Chapter 1: finding measures, evaluating expressions, and solving equations.

**Prerequisite Skills**

**VOCABULARY CHECK**
Copy and complete the statement.
1. The distance around a rectangle is called its ____?, and the distance around a circle is called its ____?
2. The number of square units covered by a figure is called its ____?

**SKILLS AND ALGEBRA CHECK**
Evaluate the expression. *(Review p. 870 for 1.2, 1.3, 1.7.)*
3. \(|4 - 6|\) 4. \(|3 - 11|\) 5. \(|-4 + 5|\) 6. \(|-8 - 10|\)

Evaluate the expression when \(x = 2\). *(Review p. 870 for 1.3–1.6.)*
7. \(5x\) 8. \(20 - 8x\) 9. \(-18 + 3x\) 10. \(-5x - 4 + 2x\)

Solve the equation. *(Review p. 875 for 1.2–1.7.)*
11. \(274 = -2z\) 12. \(8x + 12 = 60\) 13. \(2y - 5 + 7y = -32\)
14. \(6p + 11 + 3p = -7\) 15. \(8m - 5 = 25 - 2m\) 16. \(-2n + 18 = 5n - 24\)
In Chapter 1, you will apply the big ideas listed below and reviewed in the Chapter Summary on page 59. You will also use the key vocabulary listed below.

**Big Ideas**

1. Describing geometric figures
2. Measuring geometric figures
3. Understanding equality and congruence

**Key Vocabulary**

- undefined terms, p. 2
- point, line, plane
- defined terms, p. 3
- line segment, endpoints, p. 3
- ray, opposite rays, p. 3
- postulate, axiom, p. 9
- congruent segments, p. 11
- midpoint, p. 15
- segment bisector, p. 15
- acute, right, obtuse, straight angles, p. 25
- congruent angles, p. 26
- angle bisector, p. 28
- linear pair, p. 37
- vertical angles, p. 37
- polygon, p. 42
- convex, concave, p. 42
- \( n \)-gon, p. 43
- equilateral, equiangular, regular, p. 43

**Why?**

Geometric figures can be used to represent real-world situations. For example, you can show a climber’s position along a stretched rope by a point on a line segment.

**Animated Geometry**

The animation illustrated below for Exercise 35 on page 14 helps you answer this question: How far must a climber descend to reach the bottom of a cliff?

Your goal is to find the distance from a climber’s position to the bottom of a cliff.

Use the given information to enter a distance. Then check your answer.

**Animated Geometry at classzone.com**

Other animations for Chapter 1: pages 3, 21, 25, 43, and 52
1.1 Identify Points, Lines, and Planes

**Before**
You studied basic concepts of geometry.

**Now**
You will name and sketch geometric figures.

**Why**
So you can use geometry terms in the real world, as in Ex. 13.

**Key Vocabulary**
- undefined terms
  - point, line, plane
- collinear points
- coplanar points
- defined terms
- line segment
- endpoints
- ray
- opposite rays
- intersection

In the diagram of a football field, the positions of players are represented by points. The yard lines suggest lines, and the flat surface of the playing field can be thought of as a plane.

In geometry, the words point, line, and plane are **undefined terms**. These words do not have formal definitions, but there is agreement about what they mean.

**KEY CONCEPT**

**Undefined Terms**

**Point** A point has no dimension. It is represented by a dot.

**Line** A line has one dimension. It is represented by a line with two arrowheads, but it extends without end.

Through any two points, there is exactly one line. You can use any two points on a line to name it.

**Plane** A plane has two dimensions. It is represented by a shape that looks like a floor or a wall, but it extends without end.

Through any three points not on the same line, there is exactly one plane. You can use three points that are not all on the same line to name a plane.

Collinear points are points that lie on the same line. Coplanar points are points that lie in the same plane.
Identify Points, Lines, and Planes

**Defined Terms**

In geometry, terms that can be described using known words such as point or line are called **defined terms**.

If point $C$ lies on $\overrightarrow{AB}$ between $A$ and $B$, then $\overrightarrow{CA}$ and $\overrightarrow{CB}$ are **opposite rays**.

Segments and rays are collinear if they lie on the same line. So, opposite rays are collinear. Lines, segments, and rays are coplanar if they lie in the same plane.

**Example 1** Name points, lines, and planes

a. Give two other names for $\overrightarrow{PQ}$ and for plane $R$.

b. Name three points that are collinear.
   Name four points that are coplanar.

**Solution**

a. Other names for $\overrightarrow{PQ}$ are $\overrightarrow{QP}$ and line $\overline{PQ}$.
   Other names for plane $R$ are plane $\overline{SVT}$ and plane $\overline{PTV}$.

b. Points $S$, $P$, and $T$ lie on the same line, so they are collinear. Points $S$, $P$, $T$, and $V$ lie in the same plane, so they are coplanar.

**Visual Reasoning**

There is a line through points $S$ and $Q$ that is not shown in the diagram. Try to imagine what plane $SPQ$ would look like if it were shown.

**Guided Practice** for Example 1

1. Use the diagram in Example 1. Give two other names for $\overrightarrow{ST}$. Name a point that is not coplanar with points $Q$, $S$, and $T$.

**Defined Terms** In geometry, terms that can be described using known words such as point or line are called **defined terms**.

**Key Concept**

**Defined Terms: Segments and Rays**

- **Line** $AB$ (written as $\overrightarrow{AB}$) and points $A$ and $B$ are used here to define the terms below.

- **Segment** The **line segment** $AB$, or **segment** $\overline{AB}$, (written as $\overline{AB}$) consists of the **endpoints** $A$ and $B$ and all points on $\overrightarrow{AB}$ that are between $A$ and $B$. Note that $\overline{AB}$ can also be named $\overline{BA}$.

- **Ray** The **ray** $\overrightarrow{AB}$ (written as $\overrightarrow{AB}$) consists of the endpoint $A$ and all points on $\overrightarrow{AB}$ that lie on the same side of $A$ as $B$.
   Note that $\overrightarrow{AB}$ and $\overrightarrow{BA}$ are different rays.

If point $C$ lies on $\overrightarrow{AB}$ between $A$ and $B$, then $\overrightarrow{CA}$ and $\overrightarrow{CB}$ are **opposite rays**.

Segments and rays are collinear if they lie on the same line. So, opposite rays are collinear. Lines, segments, and rays are coplanar if they lie in the same plane.
**Chapter 1 Essentials of Geometry**

**Example 2** Name segments, rays, and opposite rays

a. Give another name for $\overline{GH}$.

b. Name all rays with endpoint $J$. Which of these rays are opposite rays?

**Solution**

a. Another name for $\overline{GH}$ is $\overline{HG}$.

b. The rays with endpoint $J$ are $\overrightarrow{JE}$, $\overrightarrow{JG}$, $\overrightarrow{JF}$, and $\overrightarrow{JH}$. The pairs of opposite rays with endpoint $J$ are $\overrightarrow{JE}$ and $\overrightarrow{JF}$, and $\overrightarrow{JG}$ and $\overrightarrow{JH}$.

---

**Avoid Errors**

In Example 2, $\overrightarrow{JG}$ and $\overrightarrow{JF}$ have a common endpoint, but are not collinear. So they are not opposite rays.

---

**Guided Practice** for Example 2

Use the diagram in Example 2.

2. Give another name for $\overline{EF}$.

3. Are $\overrightarrow{HJ}$ and $\overrightarrow{JH}$ the same ray? Are $\overrightarrow{HJ}$ and $\overrightarrow{HG}$ the same ray? Explain.

**Intersections** Two or more geometric figures *intersect* if they have one or more points in common. The intersection of the figures is the set of points the figures have in common. Some examples of intersections are shown below.

---

**Example 3** Sketch intersections of lines and planes

a. Sketch a plane and a line that is in the plane.

b. Sketch a plane and a line that does not intersect the plane.

c. Sketch a plane and a line that intersects the plane at a point.

**Solution**

a. 

b. 

c. 

---

4 Chapter 1 Essentials of Geometry
EXAMPLE 4 Sketch intersections of planes

Sketch two planes that intersect in a line.

Solution

STEP 1 Draw a vertical plane. Shade the plane.

STEP 2 Draw a second plane that is horizontal. Shade this plane a different color. Use dashed lines to show where one plane is hidden.

STEP 3 Draw the line of intersection.

GUIDED PRACTICE for Examples 3 and 4

4. Sketch two different lines that intersect a plane at the same point.

Use the diagram at the right.

5. Name the intersection of $\overrightarrow{PQ}$ and line $k$.

6. Name the intersection of plane $A$ and plane $B$.

7. Name the intersection of line $k$ and plane $A$.

1.1 EXERCISES

1. VOCABULARY Write in words what each of the following symbols means.

   a. $Q$

   b. $MN$

   c. $ST$

   d. $FG$

2. ★ WRITING Compare collinear points and coplanar points. Are collinear points also coplanar? Are coplanar points also collinear? Explain.

NAMING POINTS, LINES, AND PLANES In Exercises 3–7, use the diagram.

3. Give two other names for $\overrightarrow{WQ}$.

4. Give another name for plane $V$.

5. Name three points that are collinear. Then name a fourth point that is not collinear with these three points.

6. Name a point that is not coplanar with $R, S$, and $T$.

7. ★ WRITING Is point $W$ coplanar with points $Q$ and $R$? Explain.
NAMING SEGMENTS AND RAYS In Exercises 8–12, use the diagram.

8. What is another name for \(ZY\)?
9. Name all rays with endpoint \(V\).
10. Name two pairs of opposite rays.
11. Give another name for \(WV\).
12. ERROR ANALYSIS A student says that \(VW\) and \(VZ\) are opposite rays because they have the same endpoint. Describe the error.

13. ★ MULTIPLE CHOICE Which statement about the diagram at the right is true?
   A. \(A\), \(B\), and \(C\) are collinear.
   B. \(C\), \(D\), \(E\), and \(G\) are coplanar.
   C. \(B\) lies on \(GE\).
   D. \(EF\) and \(ED\) are opposite rays.

SKETCHING INTERSECTIONS Sketch the figure described.
14. Three lines that lie in a plane and intersect at one point
15. One line that lies in a plane, and one line that does not lie in the plane
16. ★ MULTIPLE CHOICE Line \(AB\) and line \(CD\) intersect at point \(E\). Which of the following are opposite rays?
   A. \(EC\) and \(ED\)  
   B. \(CE\) and \(DE\)  
   C. \(AB\) and \(BA\)  
   D. \(AE\) and \(BE\)

READING DIAGRAMS In Exercises 17–22, use the diagram at the right.
17. Name the intersection of \(PR\) and \(HR\).
18. Name the intersection of plane \(EFG\) and plane \(FGS\).
19. Name the intersection of plane \(PQS\) and plane \(HGS\).
20. Are points \(P\), \(Q\), and \(F\) collinear? Are they coplanar?
21. Are points \(P\) and \(G\) collinear? Are they coplanar?
22. Name three planes that intersect at point \(E\).
23. SKETCHING PLANES Sketch plane \(J\) intersecting plane \(K\). Then draw a line \(l\) on plane \(J\) that intersects plane \(K\) at a single point.
24. NAMING RAYS Name 10 different rays in the diagram at the right. Then name 2 pairs of opposite rays.
25. SKETCHING Draw three noncollinear points \(J\), \(K\), and \(L\). Sketch \(JK\) and add a point \(M\) on \(JK\). Then sketch \(ML\).
26. SKETCHING Draw two points \(P\) and \(Q\). Then sketch \(PQ\). Add a point \(R\) on the ray so that \(Q\) is between \(P\) and \(R\).
**ALGEBRA** In Exercises 27–32, you are given an equation of a line and a point. Use substitution to determine whether the point is on the line.

27. \( y = x - 4; \ A(5, 1) \)
28. \( y = x + 1; \ A(1, 0) \)
29. \( y = 3x + 4; \ A(7, 1) \)
30. \( y = 4x + 2; \ A(1, 6) \)
31. \( y = 3x - 2; \ A(-1, -5) \)
32. \( y = -2x + 8; \ A(-4, 0) \)

**GRAPHING** Graph the inequality on a number line. Tell whether the graph is a segment, a ray or rays, a point, or a line.

33. \( x \leq 3 \)
34. \( x \geq -4 \)
35. \(-7 \leq x \leq 4 \)
36. \( x \geq 5 \) or \( x \leq -2 \)
37. \( x \geq -1 \) or \( x \leq 5 \)
38. \(|x| \leq 0 \)

39. **CHALLENGE** Tell whether each of the following situations involving three planes is possible. If a situation is possible, make a sketch.
   a. None of the three planes intersect.
   b. The three planes intersect in one line.
   c. The three planes intersect in one point.
   d. Two planes do not intersect. The third plane intersects the other two.
   e. Exactly two planes intersect. The third plane does not intersect the other two.

40. **EVERYDAY INTERSECTIONS** What kind of geometric intersection does the photograph suggest?

41. 42.

43. **SHORT RESPONSE** *Explain* why a four-legged table may rock from side to side even if the floor is level. Would a three-legged table on the same level floor rock from side to side? Why or why not?

44. **SURVEYING** A surveying instrument is placed on a tripod. The tripod has three legs whose lengths can be adjusted.
   a. When the tripod is sitting on a level surface, are the tips of the legs coplanar?
   b. Suppose the tripod is used on a sloping surface. The length of each leg is adjusted so that the base of the surveying instrument is level with the horizon. Are the tips of the legs coplanar? *Explain*.
**MULTI-STEP PROBLEM** In a *perspective drawing*, lines that do not intersect in real life are represented by lines that appear to intersect at a point far away on the horizon. This point is called a *vanishing point*. The diagram shows a drawing of a house with two vanishing points.

a. Trace the black line segments in the drawing. Using lightly dashed lines, join points \(A\) and \(B\) to the vanishing point \(W\). Join points \(E\) and \(F\) to the vanishing point \(V\).

b. Label the intersection of \(\overrightarrow{EV}\) and \(\overrightarrow{AW}\) as \(G\). Label the intersection of \(\overrightarrow{FW}\) and \(\overrightarrow{BW}\) as \(H\).

c. Using heavy dashed lines, draw the hidden edges of the house: \(\overrightarrow{AG}, \overrightarrow{EG}, \overrightarrow{BH}, \overrightarrow{FH},\) and \(\overrightarrow{GH}\).

**CHALLENGE** Each street in a particular town intersects every existing street exactly one time. Only two streets pass through each intersection.

a. A traffic light is needed at each intersection. How many traffic lights are needed if there are 5 streets in the town? 6 streets?

b. *Describe* a pattern you can use to find the number of additional traffic lights that are needed each time a street is added to the town.

**MIXED REVIEW**

Find the difference. *(p. 869)*

47. \(-15 - 9\) 48. \(6 - 10\) 49. \(-25 - (-12)\)
50. \(13 - 20\) 51. \(16 - (-4)\) 52. \(-5 - 15\)

Evaluate the expression. *(p. 870)*

53. \(5 \cdot |-2 + 1|\) 54. \(|-8 + 7| - 6\) 55. \(-7 \cdot |8 - 10|\)

Plot the point in a coordinate plane. *(p. 878)*

56. \(A(2, 4)\) 57. \(B(-3, 6)\) 58. \(E(6, 7.5)\)
1.2 **Use Segments and Congruence**

### Key Vocabulary
- postulate, axiom
- coordinate
- distance
- between
- congruent segments

In Geometry, a rule that is accepted without proof is called a **postulate** or **axiom**. A rule that can be proved is called a **theorem**, as you will see later. Postulate 1 shows how to find the distance between two points on a line.

#### POSTULATE

**POSTULATE 1 Ruler Postulate**

The points on a line can be matched one to one with the real numbers. The real number that corresponds to a point is the **coordinate** of the point.

The **distance** between points \(A\) and \(B\), written as \(AB\), is the absolute value of the difference of the coordinates of \(A\) and \(B\).

\[
AB = |x_2 - x_1|
\]

In the diagrams above, the small numbers in the coordinates \(x_1\) and \(x_2\) are called **subscripts**. The coordinates are read as “\(x\) sub one” and “\(x\) sub two.”

The distance between points \(A\) and \(B\), or \(AB\), is also called the **length** of \(AB\).

### EXAMPLE 1 **Apply the Ruler Postulate**

**Measure the length of \(ST\) to the nearest tenth of a centimeter.**

**Solution**

Align one mark of a metric ruler with \(S\). Then estimate the coordinate of \(T\). For example, if you align \(S\) with 2, \(T\) appears to align with 5.4.

\[
ST = |5.4 - 2| = 3.4 \quad \text{Use Ruler Postulate.}
\]

The length of \(ST\) is about 3.4 centimeters.
**ADDING SEGMENT LENGTHS** When three points are collinear, you can say that one point is between the other two.

![Diagram showing points A, B, C, D, E, F with points B and E not between points A and C, or D and F.]

**POSTULATE**

**POSTULATE 2 Segment Addition Postulate**

If \( B \) is between \( A \) and \( C \), then \( AB + BC = AC \).

If \( AB + BC = AC \), then \( B \) is between \( A \) and \( C \).

**EXAMPLE 2** Apply the Segment Addition Postulate

**MAPS** The cities shown on the map lie approximately in a straight line. Use the given distances to find the distance from Lubbock, Texas, to St. Louis, Missouri.

**Solution**

Because Tulsa, Oklahoma, lies between Lubbock and St. Louis, you can apply the Segment Addition Postulate.

\[
LS = LT + TS = 380 + 360 = 740
\]

\( LS \) is about 740 miles.

**GUIDED PRACTICE**

Use a ruler to measure the length of the segment to the nearest \( \frac{1}{8} \) inch.

1. \( MN \)

2. \( PQ \)

In Exercises 3 and 4, use the diagram shown.

3. Use the Segment Addition Postulate to find \( XZ \).

4. In the diagram, \( WY = 30 \). Can you use the Segment Addition Postulate to find the distance between points \( W \) and \( Z \)? *Explain* your reasoning.
CONGRUENT SEGMENTS Line segments that have the same length are called congruent segments. In the diagram below, you can say “the length of $AB$ is equal to the length of $CD$,” or you can say “$AB$ is congruent to $CD$.” The symbol $\equiv$ means “is congruent to.”

EXAMPLE 3  **Find a length**

Use the diagram to find $GH$.

**Solution**

Use the Segment Addition Postulate to write an equation. Then solve the equation to find $GH$.

\[
\begin{align*}
FH &= FG + GH & \text{Segment Addition Postulate} \\
36 &= 21 + GH & \text{Substitute 36 for } FH \text{ and 21 for } FG. \\
15 &= GH & \text{Subtract 21 from each side.}
\end{align*}
\]

EXAMPLE 4  **Compare segments for congruence**

Plot $J(-3, 4), K(2, 4), L(1, 3)$, and $M(1, -2)$ in a coordinate plane. Then determine whether $JK$ and $LM$ are congruent.

**Solution**

To find the length of a horizontal segment, find the absolute value of the difference of the $x$-coordinates of the endpoints.

\[
JK = |2 - (-3)| = 5 \quad \text{Use Ruler Postulate.}
\]

To find the length of a vertical segment, find the absolute value of the difference of the $y$-coordinates of the endpoints.

\[
LM = |-2 - 3| = 5 \quad \text{Use Ruler Postulate.}
\]

$JK$ and $LM$ have the same length. So, $JK \equiv LM$.

**Guided Practice** for Examples 3 and 4

5. Use the diagram at the right to find $WX$.

6. Plot the points $A(-2, 4), B(3, 4), C(0, 2)$, and $D(0, -2)$ in a coordinate plane. Then determine whether $AB$ and $CD$ are congruent.
1.2 EXERCISES

**In Exercises 1 and 2, use the diagram at the right.**

1. **VOCABULARY** Explain what $\overline{MN}$ means and what $\overline{PN}$ means.

2. **WRITING** Explain how you can find $\overline{PN}$ if you know $\overline{PQ}$ and $\overline{QN}$. How can you find $\overline{PN}$ if you know $\overline{MP}$ and $\overline{MN}$?

**MEASUREMENT** Measure the length of the segment to the nearest tenth of a centimeter.

3. \[\overline{AB}\]

4. \[\overline{CD}\]

5. \[\overline{EF}\]

**SEGMENT ADDITION POSTULATE** Find the indicated length.

6. Find $\overline{MP}$.

7. Find $\overline{RT}$.

8. Find $\overline{UW}$.

9. Find $\overline{XY}$.

10. Find $\overline{BC}$.

11. Find $\overline{DE}$.

12. **ERROR ANALYSIS** In the figure at the right, $\overline{AC} = 14$ and $\overline{AB} = 9$. Describe and correct the error made in finding $\overline{BC}$.

**CONGRUENCE** In Exercises 13–15, plot the given points in a coordinate plane. Then determine whether the line segments named are congruent.

13. $A(0, 1), B(4, 1), C(1, 2), D(1, 6); \overline{AB}$ and $\overline{CD}$

14. $J(-6, -8), K(-6, 2), L(-2, -4), M(-6, -4); \overline{JK}$ and $\overline{LM}$

15. $R(-200, 300), S(200, 300), T(300, -200), U(300, 100); \overline{RS}$ and $\overline{TU}$

**ALGEBRA** Use the number line to find the indicated distance.

16. $\overline{JK}$

17. $\overline{JL}$

18. $\overline{JM}$

19. $\overline{KM}$

20. **SHORT RESPONSE** Use the diagram. Is it possible to use the Segment Addition Postulate to show that $\overline{FB} > \overline{CB}$ or that $\overline{AC} > \overline{DB}$? Explain.
1.2 Use Segments and Congruence

PROBLEM SOLVING

32. SCIENCE The photograph shows an insect called a walkingstick. Use the ruler to estimate the length of the abdomen and the length of the thorax to the nearest $\frac{1}{4}$ inch. About how much longer is the walkingstick’s abdomen than its thorax?

33. MODEL AIRPLANE In 2003, a remote-controlled model airplane became the first ever to fly nonstop across the Atlantic Ocean. The map shows the airplane’s position at three different points during its flight.

a. Find the total distance the model airplane flew.

b. The model airplane’s flight lasted nearly 38 hours. Estimate the airplane’s average speed in miles per hour.
34. ★ SHORT RESPONSE The bar graph shows the win-loss record for a lacrosse team over a period of three years.
   
a. Use the scale to find the length of the yellow bar for each year. What does the length represent?
   b. For each year, find the percent of games lost by the team.
   c. Explain how you are applying the Segment Addition Postulate when you find information from a stacked bar graph like the one shown.

35. MULTI-STEP PROBLEM A climber uses a rope to descend a vertical cliff. Let \( A \) represent the point where the rope is secured at the top of the cliff, let \( B \) represent the climber’s position, and let \( C \) represent the point where the rope is secured at the bottom of the cliff.
   
a. Model Draw and label a line segment that represents the situation.
   b. Calculate If \( AC \) is 52 feet and \( AB \) is 31 feet, how much farther must the climber descend to reach the bottom of the cliff?

36. CHALLENGE Four cities lie along a straight highway in this order: City A, City B, City C, and City D. The distance from City A to City B is 5 times the distance from City B to City C. The distance from City A to City D is 2 times the distance from City A to City B. Copy and complete the mileage chart.

37. \( \sqrt{45 + 99} \)  
38. \( \sqrt{14 + 36} \)  
39. \( \sqrt{42 + (-2)^2} \)

40. \( 4m + 5 = 7 + 6m \)  
41. \( 13 - 4h = 3h - 8 \)  
42. \( 17 + 3x = 18x - 28 \)

Use the diagram to decide whether the statement is true or false. \( p. 2 \)

43. Points \( A, C, E, \) and \( G \) are coplanar.
44. \( \overrightarrow{DF} \) and \( \overrightarrow{AG} \) intersect at point \( E \).
45. \( \overrightarrow{AE} \) and \( \overrightarrow{EG} \) are opposite rays.
1.3 Use Midpoint and Distance Formulas

**Before**
You found lengths of segments.

**Now**
You will find lengths of segments in the coordinate plane.

**Why?**
So you can find an unknown length, as in Example 1.

### Key Vocabulary
- midpoint
- segment bisector

### Activity: Fold a Segment Bisector

**STEP 1**
Draw $\overline{AB}$ on a piece of paper.

**STEP 2**
Fold the paper so that $B$ is on top of $A$.

**STEP 3**
Label point $M$. Compare $AM$, $MB$, and $AB$.

### MIDPOINTS AND BISECTORS
The **midpoint** of a segment is the point that divides the segment into two congruent segments. A **segment bisector** is a point, ray, line, line segment, or plane that intersects the segment at its midpoint. A midpoint or a segment bisector **bisects** a segment.

![Diagram showing midpoint and bisector](image)

- $M$ is the midpoint of $\overline{AB}$. So, $AM = MB$ and $AM = MB$.
- $\overline{CD}$ is a segment bisector of $\overline{AB}$. So, $AM = MB$ and $AM = MB$.

### Example 1: Find segment lengths

**SKATEBOARD** In the skateboard design, $\overline{VW}$ bisects $\overline{XY}$ at point $T$, and $XT = 39.9$ cm. Find $XY$.

**Solution**
Point $T$ is the midpoint of $\overline{XY}$. So, $XT = TY = 39.9$ cm.

\[
XY = XT + TY \\
= 39.9 + 39.9 \\
= 79.8 \text{ cm}
\]

**Segment Addition Postulate**

**Substitute.**

**Add.**
EXAMPLE 2  Use algebra with segment lengths

**ALGEBRA** Point $M$ is the midpoint of $VW$. Find the length of $VM$.

**Solution**

**STEP 1** Write and solve an equation. Use the fact that $VM = MW$.

$$VM = MW$$  Write equation.

$$4x - 1 = 3x + 3$$  Substitute.

$$x - 1 = 3$$  Subtract $3x$ from each side.

$$x = 4$$  Add 1 to each side.

**STEP 2** Evaluate the expression for $VM$ when $x = 4$.

$$VM = 4x - 1 = 4(4) - 1 = 15$$  So, the length of $VM$ is 15.

**CHECK** Because $VM = MW$, the length of $MW$ should be 15. If you evaluate the expression for $MW$, you should find that $MW = 15$.

$$MW = 3x + 3 = 3(4) + 3 = 15$$  ✓

**GUIDED PRACTICE** for Examples 1 and 2

In Exercises 1 and 2, identify the segment bisector of $PQ$. Then find $PQ$.

1. 

2. 

**COORDINATE PLANE** You can use the coordinates of the endpoints of a segment to find the coordinates of the midpoint.

**KEY CONCEPT**

**The Midpoint Formula**

The coordinates of the midpoint of a segment are the averages of the $x$-coordinates and of the $y$-coordinates of the endpoints.

If $A(x_1, y_1)$ and $B(x_2, y_2)$ are points in a coordinate plane, then the midpoint $M$ of $AB$ has coordinates

$$M \left( \frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right)$$
EXAMPLE 3 Use the Midpoint Formula

a. FIND MIDPOINT The endpoints of $RS$ are $R(1, -3)$ and $S(4, 2)$. Find the coordinates of the midpoint $M$.

b. FIND ENDPOINT The midpoint of $JK$ is $M(2, 1)$. One endpoint is $J(1, 4)$. Find the coordinates of endpoint $K$.

Solution

a. FIND MIDPOINT Use the Midpoint Formula.

$$M \left( \frac{1 + 4}{2}, \frac{-3 + 2}{2} \right) = M \left( \frac{5}{2}, \frac{-1}{2} \right)$$

The coordinates of the midpoint $M$ are $\left( \frac{5}{2}, \frac{-1}{2} \right)$.

b. FIND ENDPOINT Let $(x, y)$ be the coordinates of endpoint $K$. Use the Midpoint Formula.

**STEP 1** Find $x$.

$$\frac{1 + x}{2} = 2$$

$$1 + x = 4$$

$$x = 3$$

**STEP 2** Find $y$.

$$\frac{4 + y}{2} = 1$$

$$4 + y = 2$$

$$y = -2$$

The coordinates of endpoint $K$ are $(3, -2)$.

GUIDED PRACTICE for Example 3

3. The endpoints of $AB$ are $A(1, 2)$ and $B(7, 8)$. Find the coordinates of the midpoint $M$.

4. The midpoint of $VW$ is $M(-1, -2)$. One endpoint is $W(4, 4)$. Find the coordinates of endpoint $V$.

DISTANCE FORMULA The Distance Formula is a formula for computing the distance between two points in a coordinate plane.

KEY CONCEPT

The Distance Formula

If $A(x_1, y_1)$ and $B(x_2, y_2)$ are points in a coordinate plane, then the distance between $A$ and $B$ is

$$AB = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}.$$
The Distance Formula is based on the Pythagorean Theorem, which you will see again when you work with right triangles in Chapter 7.

Distance Formula

\[(AB)^2 = (x_2 - x_1)^2 + (y_2 - y_1)^2\]

Pythagorean Theorem

\[c^2 = a^2 + b^2\]

**Example 4** Standardized Test Practice

What is the approximate length of RS with endpoints R(2, 3) and S(4, -1)?

- **A** 1.4 units
- **B** 4.0 units
- **C** 4.5 units
- **D** 6 units

**Solution**

Use the Distance Formula. You may find it helpful to draw a diagram.

\[RS = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}\]

\[= \sqrt{(4 - 2)^2 + (-1 - 3)^2}\]

\[= \sqrt{2^2 + (-4)^2}\]

\[= \sqrt{4 + 16}\]

\[= \sqrt{20}\]

\[= 4.47\]

The correct answer is C.  **A**  **B**  **C**  **D**

**Guided Practice** for Example 4

5. In Example 4, does it matter which ordered pair you choose to substitute for \((x_1, y_1)\) and which ordered pair you choose to substitute for \((x_2, y_2)\)? Explain.

6. What is the approximate length of AB, with endpoints A(-3, 2) and B(1, -4)?

- **A** 6.1 units
- **B** 7.2 units
- **C** 8.5 units
- **D** 10.0 units
1. **VOCABULARY** Copy and complete: To find the length of $\overline{AB}$, with endpoints $A(-7, 5)$ and $B(4, -6)$, you can use the __________.

2. ★ **WRITING** Explain what it means to bisect a segment. Why is it impossible to bisect a line?

### FINDING LENGTHS

Line $l$ bisects the segment. Find the indicated length.

3. Find $RT$ if $RS = \frac{5}{8}$ in.

4. Find $UW$ if $VW = \frac{5}{8}$ in.

5. Find $EG$ if $EF = 13$ cm.

6. Find $BC$ if $AC = 19$ cm.

7. Find $QR$ if $PR = 9\frac{1}{2}$ in.

8. Find $LM$ if $LN = 137$ mm.

9. **SEGMENT BISECTOR** Line $RS$ bisects $\overline{PQ}$ at point $R$. Find $RQ$ if $PQ = 4\frac{3}{4}$ inches.

10. **SEGMENT BISECTOR** Point $T$ bisects $\overline{UV}$. Find $UV$ if $UT = 2\frac{7}{8}$ inches.

### ALGEBRA

In each diagram, $M$ is the midpoint of the segment. Find the indicated length.

11. Find $AM$.

12. Find $EM$.

13. Find $JM$.

14. Find $PR$.

15. Find $SU$.

16. Find $XZ$.

### FINDING MIDPOINTS

Find the coordinates of the midpoint of the segment with the given endpoints.

17. $C(3, 5)$ and $D(7, 5)$

18. $E(0, 4)$ and $F(4, 3)$

19. $G(-4, 4)$ and $H(6, 4)$

20. $J(-7, -5)$ and $K(-3, 7)$

21. $P(-8, -7)$ and $Q(11, 5)$

22. $S(-3, 3)$ and $T(-8, 6)$

23. ★ **WRITING** Develop a formula for finding the midpoint of a segment with endpoints $A(0, 0)$ and $B(m, n)$. Explain your thinking.
24. **ERROR ANALYSIS** Describe the error made in finding the coordinates of the midpoint of a segment with endpoints S(8, 3) and T(2, −1).

**EXAMPLE 4** on p. 18 for Exs. 31–34

**FINDING ENDPOINTS** Use the given endpoint R and midpoint M of RS to find the coordinates of the other endpoint S.

25. R(3, 0), M(0, 5)  
26. R(5, 1), M(1, 4)  
27. R(6, −2), M(5, 3)  
28. R(−7, 11), M(2, 1)  
29. R(4, 26), M(27, 8)  
30. R(−4, −6), M(3, −4)

**DISTANCE FORMULA** Find the length of the segment. Round to the nearest tenth of a unit.

31.  
32.  
33.  
34. **MULTIPLE CHOICE** The endpoints of MN are M(−3, −9) and N(4, 8).
What is the approximate length of MN?
A 1.4 units  
B 7.2 units  
C 13 units  
D 18.4 units

**NUMBER LINE** Find the length of the segment. Then find the coordinate of the midpoint of the segment.

35.  
36.  
37.  
38.  
39.  
40.  
41. **MULTIPLE CHOICE** The endpoints of LF are L(−2, 2) and F(3, 1).
The endpoints of JR are J(1, −1) and R(2, −3). What is the approximate difference in the lengths of the two segments?
A 2.24  
B 2.86  
C 5.10  
D 7.96

42. **SHORT RESPONSE** One endpoint of PQ is P(−2, 4). The midpoint of PQ is M(1, 0). Explain how to find PQ.

**COMPARING LENGTHS** The endpoints of two segments are given. Find each segment length. Tell whether the segments are congruent.

43. \( AB: A(0, 2), B(−3, 8) \)  
44. \( EF: E(1, 4), F(5, 1) \)  
45. \( JK: J(−4, 0), K(4, 8) \)  
46. \( CD: C(−2, 2), D(0, −4) \)  
47. \( GH: G(−3, 1), H(1, 6) \)  
48. \( LM: L(−4, 2), M(3, −7) \)

46. **ALGEBRA** Points S, T, and P lie on a number line. Their coordinates are 0, 1, and x, respectively. Given \( SP = PT \), what is the value of x?

47. **CHALLENGE** M is the midpoint of JK, JM = \( \frac{x}{8} \) and JK = \( \frac{3x}{4} \) − 6. Find MK.

\( = WORKED-OUT SOLUTIONS \) on p. WS1  
\( \star = STANDARDIZED TEST PRACTICE \)
48. **WINDMILL**  In the photograph of a windmill, $ST$ bisects $QR$ at point $M$. The length of $QM$ is $18\frac{1}{2}$ feet. Find $QR$ and $MR$.

49. **DISTANCES** A house and a school are 5.7 kilometers apart on the same straight road. The library is on the same road, halfway between the house and the school. Draw a sketch to represent this situation. Mark the locations of the house, school, and library. How far is the library from the house?

**ARCHAEOLOGY** The points on the diagram show the positions of objects at an underwater archaeological site. Use the diagram for Exercises 50 and 51.

50. Find the distance between each pair of objects. Round to the nearest tenth of a meter if necessary.
   a. $A$ and $B$  
   b. $B$ and $C$  
   c. $C$ and $D$  
   d. $A$ and $D$  
   e. $B$ and $D$  
   f. $A$ and $C$

51. Which two objects are closest to each other? Which two are farthest apart?

52. **WATER POLO** The diagram shows the positions of three players during part of a water polo match. Player $A$ throws the ball to Player $B$, who then throws it to Player $C$. How far did Player $A$ throw the ball? How far did Player $B$ throw the ball? How far would Player $A$ have thrown the ball if he had thrown it directly to Player $C$? Round all answers to the nearest tenth of a meter.
53. **EXTENDED RESPONSE** As shown, a path goes around a triangular park.

a. Find the distance around the park to the nearest yard.

b. A new path and a bridge are constructed from point $Q$ to the midpoint $M$ of $PR$. Find $QM$ to the nearest yard.

c. A man jogs from $P$ to $Q$ to $M$ to $R$ to $Q$ and back to $P$ at an average speed of 150 yards per minute. About how many minutes does it take? *Explain.*

54. **CHALLENGE** $AB$ bisects $CD$ at point $M$, $CD$ bisects $AB$ at point $M$, and $AB = 4 \cdot CM$. Describe the relationship between $AM$ and $CD$.

---

**MIXED REVIEW**

The graph shows data about the number of children in the families of students in a math class. *(p. 888)*

55. What percent of the students in the class belong to families with two or more children?

56. If there are 25 students in the class, how many students belong to families with two children?

Solve the equation. *(p. 875)*

57. $3x + 12 + x = 20$

58. $9x + 2x + 6 - x = 10$

59. $5x - 22 - 7x + 2 = 40$

In Exercises 60–64, use the diagram at the right. *(p. 2)*

60. Name all rays with endpoint $B$.

61. Name all the rays that contain point $C$.

62. Name a pair of opposite rays.

63. Name the intersection of $\overline{AB}$ and $\overline{BC}$.

64. Name the intersection of $\overline{BC}$ and plane $P$.

---

**QUIZ for Lessons 1.1–1.3**

1. Sketch two lines that intersect the same plane at two different points. The lines intersect each other at a point not in the plane. *(p. 2)*

In the diagram of collinear points, $AE = 26$, $AD = 15$, and $AB = BC = CD$. Find the indicated length. *(p. 9)*

2. $DE$

3. $AB$

4. $AC$

5. $BD$

6. $CE$

7. $BE$

8. The endpoints of $RS$ are $R(−2, −1)$ and $S(2, 3)$. Find the coordinates of the midpoint of $RS$. Then find the distance between $R$ and $S$. *(p. 15)*
1. **MULTI-STEP PROBLEM** The diagram shows existing roads (BD and DE) and a new road (CE) under construction.

   a. If you drive from point B to point E on existing roads, how far do you travel?
   
   b. If you use the new road as you drive from B to E, about how far do you travel? Round to the nearest tenth of a mile if necessary.
   
   c. About how much shorter is the trip from B to E if you use the new road?

2. **GRIDDED ANSWER** Point M is the midpoint of PQ. If PM = 23x + 5 and MQ = 25x - 4, find the length of PQ.

3. **GRIDDED ANSWER** You are hiking on a trail that lies along a straight railroad track. The total length of the trail is 5.4 kilometers. You have been hiking for 45 minutes at an average speed of 2.4 kilometers per hour. How much farther (in kilometers) do you need to hike to reach the end of the trail?

4. **SHORT RESPONSE** The diagram below shows the frame for a wall. FH represents a vertical board, and EG represents a brace. If FG = 143 cm, does the brace bisect FH? If not, how long should FG be so that the brace does bisect FH? Explain.

5. **SHORT RESPONSE** Point E is the midpoint of AB and the midpoint of CD. The endpoints of AB are A(-4, 5) and B(6, -5). The coordinates of point C are (2, 8). Find the coordinates of point D. Explain how you got your answer.

6. **OPEN-ENDED** The distance around a figure is its perimeter. Choose four points in a coordinate plane that can be connected to form a rectangle with a perimeter of 16 units. Then choose four other points and draw a different rectangle that has a perimeter of 16 units. Show how you determined that each rectangle has a perimeter of 16 units.

7. **SHORT RESPONSE** Use the diagram of a box. What are all the names that can be used to describe the plane that contains points B, F, and C? Name the intersection of planes ABC and BFE. Explain.

8. **EXTENDED RESPONSE** Jill is a salesperson who needs to visit towns A, B, and C. On the map below, AB = 18.7 km and BC = 2AB. Assume Jill travels along the road shown.

   a. Find the distance Jill travels if she starts at Town A, visits Towns B and C, and then returns to Town A.
   
   b. About how much time does Jill spend driving if her average driving speed is 70 kilometers per hour?
   
   c. Jill needs to spend 2.5 hours in each town. Can she visit all three towns and return to Town A in an 8 hour workday? Explain.
1.4 Measure and Classify Angles

You named and measured line segments.
You will name, measure, and classify angles.
So you can identify congruent angles, as in Example 4.

Key Vocabulary
- angle
  - acute, right, obtuse, straight
- sides, vertex of an angle
- measure of an angle
- congruent angles
- angle bisector

An angle consists of two different rays with the same endpoint. The rays are the sides of the angle. The endpoint is the vertex of the angle.

The angle with sides $\overrightarrow{AB}$ and $\overrightarrow{AC}$ can be named $\angle BAC$, $\angle CAB$, or $\angle A$. Point $A$ is the vertex of the angle.

**Example 1** Name angles

Name the three angles in the diagram.

$\angle WXY$, or $\angle YWX$

$\angle YXZ$, or $\angle ZXY$

$\angle WXZ$, or $\angle ZWX$

You should not name any of these angles $\angle X$ because all three angles have $X$ as their vertex.

**Measuring Angles** A protractor can be used to approximate the measure of an angle. An angle is measured in units called degrees ($^\circ$). For instance, the measure of $\angle WXZ$ in Example 1 above is $32^\circ$. You can write this statement in two ways.

**Words** The measure of $\angle WXZ$ is $32^\circ$.

**Symbols** $m\angle WXZ = 32^\circ$

**Postulate**

**Postulate 3** Protractor Postulate

Consider $\overrightarrow{OB}$ and a point $A$ on one side of $\overrightarrow{OB}$.
The rays of the form $\overrightarrow{OA}$ can be matched one to one with the real numbers from 0 to 180.

The measure of $\angle AOB$ is equal to the absolute value of the difference between the real numbers for $\overrightarrow{OA}$ and $\overrightarrow{OB}$.
CLASSIFYING ANGLES Angles can be classified as **acute, right, obtuse**, and **straight**, as shown below.

**Acute angle**

\[ 0^\circ < m\angle A < 90^\circ \]

**Right angle**

\[ m\angle A = 90^\circ \]

**Obtuse angle**

\[ 90^\circ < m\angle A < 180^\circ \]

**Straight angle**

\[ m\angle A = 180^\circ \]

**Example 2** Measure and classify angles

Use the diagram to find the measure of the indicated angle. Then classify the angle.

a. \( \angle KHJ \)

b. \( \angle GHK \)

c. \( \angle GHJ \)

d. \( \angle GHL \)

**Solution**

A protractor has an inner and an outer scale. When you measure an angle, check to see which scale to use.

a. \( \overline{HJ} \) is lined up with the 0° on the inner scale of the protractor. \( \overline{HK} \) passes through 55° on the inner scale. So, \( m\angle KHJ = 55^\circ \). It is an acute angle.

b. \( \overline{HG} \) is lined up with the 0° on the outer scale, and \( \overline{HK} \) passes through 125° on the outer scale. So, \( m\angle GHK = 125^\circ \). It is an obtuse angle.

c. \( m\angle GHJ = 180^\circ \). It is a straight angle.

d. \( m\angle GHL = 90^\circ \). It is a right angle.

**Guided Practice** for Examples 1 and 2

1. Name all the angles in the diagram at the right. Which angle is a right angle?

2. Draw a pair of opposite rays. What type of angle do the rays form?

**Postulate 4 Angle Addition Postulate**

**Words** If \( P \) is in the interior of \( \angle RST \), then the measure of \( \angle RST \) is equal to the sum of the measures of \( \angle RSP \) and \( \angle PST \).

**Symbols** If \( P \) is in the interior of \( \angle RST \), then \( m\angle RST = m\angle RSP + m\angle PST \).
CONGRUENT ANGLES Two angles are congruent angles if they have the same measure. In the diagram below, you can say that “the measure of angle A is equal to the measure of angle B,” or you can say “angle A is congruent to angle B.”

**Example 3** Find angle measures

**ALGEBRA** Given that $m\angle LKN = 145^\circ$, find $m\angle LKM$ and $m\angle MKN$.

**Solution**

**STEP 1** Write and solve an equation to find the value of $x$.

$$m\angle LKN = m\angle LKM + m\angle MKN$$

**Angle Addition Postulate**

$$145^\circ = (2x + 10)^\circ + (4x - 3)^\circ$$

**Substitute angle measures.**

$$145 = 6x + 7$$

**Combine like terms.**

$$138 = 6x$$

**Subtract 7 from each side.**

$$23 = x$$

**Divide each side by 6.**

**STEP 2** Evaluate the given expressions when $x = 23$.

$$m\angle LKM = (2x + 10)^\circ = (2 \cdot 23 + 10)^\circ = 56^\circ$$

$$(4x - 3)^\circ = (4 \cdot 23 - 3)^\circ = 89^\circ$$

So, $m\angle LKM = 56^\circ$ and $m\angle MKN = 89^\circ$.

**Guided Practice** for Example 3

Find the indicated angle measures.

3. Given that $\angle KLM$ is a straight angle, find $m\angle KLN$ and $m\angle NLM$.

4. Given that $\angle EFG$ is a right angle, find $m\angle EFH$ and $m\angle HFG$.

**Congruent Angles** Two angles are congruent angles if they have the same measure. In the diagram below, you can say that “the measure of angle $A$ is equal to the measure of angle $B$,” or you can say “angle $A$ is congruent to angle $B$.”

**Read Diagrams**

Matching arcs are used to show that angles are congruent. If more than one pair of angles are congruent, double arcs are used, as in Example 4 on page 27.
**Example 4** Identify congruent angles

**Trapeze** The photograph shows some of the angles formed by the ropes in a trapeze apparatus. Identify the congruent angles. If \( m \angle DEG = 157^\circ \), what is \( m \angle GKL \)?

![Image of trapeze apparatus with angles]

**Solution**

There are two pairs of congruent angles:

\[ \angle DEF \equiv \angle JKL \text{ and } \angle DEG \equiv \angle GKL. \]

Because \( \angle DEG \equiv \angle GKL \), \( m \angle DEG = m \angle GKL \). So, \( m \angle GKL = 157^\circ \).

---

**Guided Practice** for Example 4

Use the diagram shown at the right.

5. Identify all pairs of congruent angles in the diagram.

6. In the diagram, \( m \angle PQR = 130^\circ \), \( m \angle QRS = 84^\circ \), and \( m \angle TSR = 121^\circ \). Find the other angle measures in the diagram.

---

**Activity** Fold an Angle Bisector

**Step 1**

Use a straightedge to draw and label an acute angle, \( \angle ABC \).

**Step 2**

Fold the paper so that \( \overline{BC} \) is on top of \( \overline{BA} \).

**Step 3**

Draw a point \( D \) on the fold inside \( \angle ABC \). Then measure \( \angle ABD \), \( \angle DBC \), and \( \angle ABC \). What do you observe?
An **angle bisector** is a ray that divides an angle into two angles that are congruent. In the activity on page 27, $\overline{BD}$ bisects $\angle ABC$. So, $\angle ABD \cong \angle DBC$ and $m\angle ABD = m\angle DBC$.

### Example 5  Double an angle measure

In the diagram at the right, $\overleftrightarrow{YW}$ bisects $\angle XYZ$, and $m\angle XYW = 18^\circ$. Find $m\angle XYZ$.

**Solution**

By the Angle Addition Postulate, $m\angle XYZ = m\angle XYW + m\angle WYZ$. Because $\overleftrightarrow{YW}$ bisects $\angle XYZ$, you know that $\angle XYW \cong \angle WYZ$.

So, $m\angle XYW = m\angle WYZ$, and you can write

$$m\angle XYZ = m\angle XYW + m\angle WYZ = 18^\circ + 18^\circ = 36^\circ.$$
6. **NAMING ANGLES** Name three different angles in the diagram at the right.

**EXAMPLE 2** on p. 25 for Exs. 7–21

**CLASSIFYING ANGLES** Classify the angle with the given measure as **acute**, **obtuse**, **right**, or **straight**.

7. \( m \angle W = 180^\circ \) 8. \( m \angle X = 30^\circ \) 9. \( m \angle Y = 90^\circ \) 10. \( m \angle Z = 95^\circ \)

**MEASURING ANGLES** Trace the diagram and extend the rays. Use a protractor to find the measure of the given angle. Then classify the angle as **acute**, **obtuse**, **right**, or **straight**.

11. \( \angle JFL \) 12. \( \angle GFH \) 13. \( \angle GFK \) 14. \( \angle GFL \)

**NAMING AND CLASSIFYING** Give another name for the angle in the diagram below. Tell whether the angle appears to be **acute**, **obtuse**, **right**, or **straight**.

15. \( \angle ACB \) 16. \( \angle ABC \) 17. \( \angle BFD \) 18. \( \angle AEC \) 19. \( \angle BDC \) 20. \( \angle BEC \)

**EXAMPLE 3** on p. 26 for Exs. 22–27

**ANGLE ADDITION POSTULATE** Find the indicated angle measure.

22. \( m \angle QST = \ ? \) 23. \( m \angle ADC = \ ? \) 24. \( m \angle NPM = \ ? \)

**ALGEBRA** Use the given information to find the indicated angle measure.

25. Given \( m \angle WXZ = 80^\circ \), find \( m \angle YXZ \). 26. Given \( m \angle FJH = 168^\circ \), find \( m \angle FJG \).

27. **MULTIPLE CHOICE** In the diagram, the measure of \( \angle XYZ \) is 140°. What is the value of \( x \)?

A 27  B 33  C 67  D 73
28. CONGRUENT ANGLES In the photograph below, \( \angle AED = 34^\circ \) and \( \angle EAD = 112^\circ \). Identify the congruent angles in the diagram. Then find \( m\angle BDC \) and \( m\angle ADB \).

![Diagram showing angles AED, EAD, BDC, and ADB.

29. ANGLE BISECTORS Given that \( \overrightarrow{WZ} \) bisects \( \angle XWY \), find the two angle measures not given in the diagram.

30. ANGLE BISECTORS

![Diagram with angles and bisector WZ.

32. ERROR ANALYSIS \( \overrightarrow{KM} \) bisects \( \angle JKL \) and \( m\angle JKM = 30^\circ \). Describe and correct the error made in stating that \( m\angle JKL = 15^\circ \). Draw a sketch to support your answer.

33. FINDING ANGLE MEASURES Find the indicated angle measure.

34. \( a^\circ \)  
35. \( b^\circ \)  
36. \( c^\circ \)  
37. \( d^\circ \)  
38. \( e^\circ \)  
39. ERROR ANALYSIS A student states that \( \overrightarrow{AD} \) can bisect \( \angle AGC \). Describe and correct the student’s error. Draw a sketch to support your answer.

40. ALGEBRA In each diagram, \( \overrightarrow{BD} \) bisects \( \angle ABC \). Find \( m\angle ABC \).

41. ALGEBRA

![Diagram showing angles ABC with bisector BD.

43. SHORT RESPONSE You are measuring \( \angle PQR \) with a protractor. When you line up \( \overrightarrow{QR} \) with the 20° mark, \( \overrightarrow{QP} \) lines up with the 80° mark. Then you move the protractor so that \( \overrightarrow{QR} \) lines up with the 15° mark. What mark does \( \overrightarrow{QP} \) line up with? Explain.

44. ALGEBRA Plot the points in a coordinate plane and draw \( \angle ABC \). Classify the angle. Then give the coordinates of a point that lies in the interior of the angle.

45. \( A(-5, 4), B(1, 4), C(-2, -2) \)
46. \( A(-5, 2), B(-2, -2), C(4, -3) \)
47. \( A(-3, -1), B(2, 1), C(6, -2) \)

WORKED-OUT SOLUTIONS on p. WS1

STANDARDIZED TEST PRACTICE
1.4 Measure and Classify Angles

48. **ALGEBRA** Let \( (2x - 12)° \) represent the measure of an acute angle. What are the possible values of \( x \)?

49. **CHALLENGE** \( \overrightarrow{SQ} \) bisects \( \angle RST \), \( \overrightarrow{SP} \) bisects \( \angle RSQ \), and \( \overrightarrow{SV} \) bisects \( \angle RSP \). The measure of \( \angle VSP \) is \( 17° \). Find \( m \angle TSQ \). Explain.

50. **FINDING MEASURES** In the diagram,
   \[ m \angle AEB = \frac{1}{2} \, m \angle CED, \text{ and } \angle AED \]
   is a straight angle. Find \( m \angle AEB \) and \( m \angle CED \).

---

**PROBLEM SOLVING**

51. **SCULPTURE** In the sculpture shown in the photograph, suppose the measure of \( \angle LMN \) is \( 79° \) and the measure of \( \angle PMN \) is \( 47° \). What is the measure of \( \angle LMP \)?

52. **MAP** The map shows the intersection of three roads. Malcom Way intersects Sydney Street at an angle of \( 162° \). Park Road intersects Sydney Street at an angle of \( 87° \). Find the angle at which Malcom Way intersects Park Road.

---

**CONSTRUCTION** In Exercises 53–55, use the photograph of a roof truss.

53. In the roof truss, \( \overrightarrow{BG} \) bisects \( \angle ABC \) and \( \angle DEF \), \( m \angle ABC = 112° \), and \( \angle ABC \equiv \angle DEF \). Find the measure of the following angles.
   a. \( m \angle DEF \)
   b. \( m \angle ABG \)
   c. \( m \angle CBG \)
   d. \( m \angle DEG \)

54. In the roof truss, \( \overrightarrow{GB} \) bisects \( \angle DGF \). Find \( m \angle DGE \) and \( m \angle FGE \).

55. Name an example of each of the following types of angles: *acute*, *obtuse*, *right*, and *straight*. 

---

**EXAMPLES**

4 and 5 on pp. 27–28 for Exs. 53–55
**GEOGRAPHY** For the given location on the map, estimate the measure of ∠PSL, where P is on the Prime Meridian (0° longitude), S is the South Pole, and L is the location of the indicated research station.

56. Macquarie Island  
57. Dumont d’Urville  
58. McMurdo  
59. Mawson  
60. Syowa  
61. Vostok

62. ★ EXTENDED RESPONSE In the flag shown, ∠AFE is a straight angle and FC bisects ∠AFE and ∠BFD.
   a. Which angles are acute? obtuse? right?
   b. Identify the congruent angles.
   c. If \( m\angle AFB = 26° \), find \( m\angle DFE \), \( m\angle BFC \), \( m\angle CFD \), \( m\angle AFC \), \( m\angle AFD \), and \( m\angle BFD \). Explain.

63. CHALLENGE Create a set of data that could be represented by the circle graph at the right. Explain your reasoning.

---

**Mixed Review**

PREVIEW Prepare for Lesson 1.5 in Ex. 64.

64. You and a friend go out to dinner and each pay for your own meal. The total cost of the two meals is $25. Your meal cost $4 more than your friend’s meal. How much does each meal cost? (p. 894)

Graph the inequality on a number line. Tell whether the graph is a segment, a ray or rays, a point, or a line. (p. 2)

65. \( x \leq -8 \)  
66. \( x \geq 6 \)  
67. \( -3 \leq x \leq 5 \)

68. \( x \geq -7 \) and \( x \leq -1 \)

Find the coordinate of the midpoint of the segment. (p. 15)

71.  
72.  
73.
1.4 Copy and Bisect Segments and Angles

**MATERIALS** • compass • straightedge

**QUESTION** How can you copy and bisect segments and angles?

A construction is a geometric drawing that uses a limited set of tools, usually a compass and straightedge. You can use a compass and straightedge (a ruler without marks) to construct a segment that is congruent to a given segment, and an angle that is congruent to a given angle.

**EXPLORE 1** Copy a segment

Use the following steps to construct a segment that is congruent to $\overline{AB}$.

1. **STEP 1**
   - **Draw a segment** Use a straightedge to draw a segment longer than $\overline{AB}$. Label point $C$ on the new segment.

2. **STEP 2**
   - **Measure length** Set your compass at the length of $\overline{AB}$.

3. **STEP 3**
   - **Copy length** Place the compass at $C$. Mark point $D$ on the new segment. $\overline{CD} \cong \overline{AB}$.

**EXPLORE 2** Bisect a segment

Use the following steps to construct a bisector of $\overline{AB}$ and to find the midpoint $M$ of $\overline{AB}$.

1. **STEP 1**
   - **Draw an arc** Place the compass at $A$. Use a compass setting that is greater than half the length of $\overline{AB}$. Draw an arc.

2. **STEP 2**
   - **Draw a second arc** Keep the same compass setting. Place the compass at $B$. Draw an arc. It should intersect the other arc at two points.

3. **STEP 3**
   - **Bisect segment** Draw a segment through the two points of intersection. This segment bisects $\overline{AB}$ at $M$, the midpoint of $\overline{AB}$. 
**Explore 3** Copy an angle

Use the following steps to construct an angle that is congruent to $\angle A$. In this construction, the *radius* of an arc is the distance from the point where the compass point rests (the *center* of the arc) to a point on the arc drawn by the compass.

**STEP 1**

**Draw a segment**

Draw a segment. Label a point $D$ on the segment.

**STEP 2**

**Draw arcs**

Draw an arc with center $A$. Using the same radius, draw an arc with center $D$.

**STEP 3**

**Draw arcs**

Label $B$, $C$, and $E$. Draw an arc with radius $BC$ and center $E$. Label the intersection $F$.

**STEP 4**

**Draw a ray**

Draw $DF$.

$\angle EDF \equiv \angle BAC$.

**Explore 4** Bisect an angle

Use the following steps to construct an angle bisector of $\angle A$.

**STEP 1**

**Draw an arc**

Place the compass at $A$. Draw an arc that intersects both sides of the angle. Label the intersections $C$ and $B$.

**STEP 2**

**Draw arcs**

Place the compass at $C$. Draw an arc. Then place the compass point at $B$. Using the same radius, draw another arc.

**STEP 3**

**Draw a ray**

Label the intersection $G$. Use a straightedge to draw a ray through $A$ and $G$.

$\overrightarrow{AG}$ bisects $\angle A$.

**Draw Conclusions** Use your observations to complete these exercises

1. Describe how you could use a compass and a straightedge to draw a segment that is twice as long as a given segment.

2. Draw an obtuse angle. Copy the angle using a compass and a straightedge. Then bisect the angle using a compass and straightedge.
1.5 Describe Angle Pair Relationships

You used angle postulates to measure and classify angles.

You will use special angle relationships to find angle measures.

So you can find measures in a building, as in Ex. 53.

Key Vocabulary
- complementary angles
- supplementary angles
- adjacent angles
- linear pair
- vertical angles

Two angles are complementary angles if the sum of their measures is $90^\circ$. Each angle is the complement of the other. Two angles are supplementary angles if the sum of their measures is $180^\circ$. Each angle is the supplement of the other.

Complementary angles and supplementary angles can be adjacent angles or nonadjacent angles. Adjacent angles are two angles that share a common vertex and side, but have no common interior points.

### Example 1 Identify complements and supplements

In the figure, name a pair of complementary angles, a pair of supplementary angles, and a pair of adjacent angles.

**Solution**

Because $32^\circ + 58^\circ = 90^\circ$, $\angle BAC$ and $\angle RST$ are complementary angles.

Because $122^\circ + 58^\circ = 180^\circ$, $\angle CAD$ and $\angle RST$ are supplementary angles.

Because $\angle BAC$ and $\angle CAD$ share a common vertex and side, they are adjacent.

### Guided Practice for Example 1

1. In the figure, name a pair of complementary angles, a pair of supplementary angles, and a pair of adjacent angles.

2. Are $\angle KGH$ and $\angle LKG$ adjacent angles? Are $\angle FGK$ and $\angle FGH$ adjacent angles? Explain.
EXAMPLE 2 Find measures of a complement and a supplement

a. Given that \( \angle 1 \) is a complement of \( \angle 2 \) and \( m\angle 1 = 68^\circ \), find \( m\angle 2 \).

b. Given that \( \angle 3 \) is a supplement of \( \angle 4 \) and \( m\angle 4 = 56^\circ \), find \( m\angle 3 \).

Solution

a. You can draw a diagram with complementary adjacent angles to illustrate the relationship.

\[
m\angle 2 = 90^\circ - m\angle 1 = 90^\circ - 68^\circ = 22^\circ
\]

b. You can draw a diagram with supplementary adjacent angles to illustrate the relationship.

\[
m\angle 3 = 180^\circ - m\angle 4 = 180^\circ - 56^\circ = 124^\circ
\]

EXAMPLE 3 Find angle measures

SPRINTS When viewed from the side, the frame of a ball-return net forms a pair of supplementary angles with the ground. Find \( m\angle BCE \) and \( m\angle ECD \).

Solution

STEP 1 Use the fact that the sum of the measures of supplementary angles is 180°.

\[
m\angle BCE + m\angle ECD = 180^\circ
\]

Write equation.

\[
(4x + 8)^\circ + (x + 2)^\circ = 180^\circ
\]

Substitute.

\[
5x + 10 = 180
\]

Combine like terms.

\[
5x = 170
\]

Subtract 10 from each side.

\[
x = 34
\]

Divide each side by 5.

STEP 2 Evaluate the original expressions when \( x = 34 \).

\[
m\angle BCE = (4x + 8)^\circ = (4 \cdot 34 + 8)^\circ = 144^\circ
\]

\[
m\angle ECD = (x + 2)^\circ = (34 + 2)^\circ = 36^\circ
\]

The angle measures are 144° and 36°.

GUIDED PRACTICE for Examples 2 and 3

3. Given that \( \angle 1 \) is a complement of \( \angle 2 \) and \( m\angle 2 = 8^\circ \), find \( m\angle 1 \).

4. Given that \( \angle 3 \) is a supplement of \( \angle 4 \) and \( m\angle 3 = 117^\circ \), find \( m\angle 4 \).

5. \( \angle LMN \) and \( \angle PQR \) are complementary angles. Find the measures of the angles if \( m\angle LMN = (4x - 2)^\circ \) and \( m\angle PQR = (9x + 1)^\circ \).
1.5 Describe Angle Pair Relationships

ANGLE PAIRS Two adjacent angles are a **linear pair** if their noncommon sides are opposite rays. The angles in a linear pair are supplementary angles.

Two angles are **vertical angles** if their sides form two pairs of opposite rays.

![Diagram of angle pairs]

**EXAMPLE 4** Identify angle pairs

Identify all of the linear pairs and all of the vertical angles in the figure at the right.

**Solution**

To find vertical angles, look for angles formed by intersecting lines.

- ∠1 and ∠5 are vertical angles.

To find linear pairs, look for adjacent angles whose noncommon sides are opposite rays.

- ∠1 and ∠4 are a linear pair. ∠4 and ∠5 are also a linear pair.

**GUIDED PRACTICE** for Examples 4 and 5

6. Do any of the numbered angles in the diagram at the right form a linear pair? Which angles are vertical angles? Explain.

7. The measure of an angle is twice the measure of its complement. Find the measure of each angle.
1. **VOCABULARY** Sketch an example of adjacent angles that are complementary. Are all complementary angles adjacent angles? Explain.

2. ★ **WRITING** Are all linear pairs supplementary angles? Are all supplementary angles linear pairs? Explain.

### IDENTIFYING ANGLES

Tell whether the indicated angles are adjacent.

3. \( \angle ABD \) and \( \angle DBC \)

4. \( \angle WXY \) and \( \angle XYZ \)

5. \( \angle LQM \) and \( \angle NQM \)

### IDENTIFYING ANGLES

Name a pair of complementary angles and a pair of supplementary angles.

6.

**Chapter 1 Essentials of Geometry**

38
1.5 Describe Angle Pair Relationships

COMPLEMENTARY ANGLES \( \angle 1 \) and \( \angle 2 \) are complementary angles. Given the measure of \( \angle 1 \), find \( m \angle 2 \).

8. \( m \angle 1 = 43^\circ \)  
9. \( m \angle 1 = 21^\circ \)  
10. \( m \angle 1 = 89^\circ \)  
11. \( m \angle 1 = 5^\circ \)

SUPPLEMENTARY ANGLES \( \angle 1 \) and \( \angle 2 \) are supplementary angles. Given the measure of \( \angle 1 \), find \( m \angle 2 \).

12. \( m \angle 1 = 60^\circ \)  
13. \( m \angle 1 = 155^\circ \)  
14. \( m \angle 1 = 130^\circ \)  
15. \( m \angle 1 = 27^\circ \)

16. ★ MULTIPLE CHOICE The arm of a crossing gate moves \( 37^\circ \) from vertical. How many more degrees does the arm have to move so that it is horizontal?

   A. \( 37^\circ \)  
   B. \( 53^\circ \)  
   C. \( 90^\circ \)  
   D. \( 143^\circ \)

IDENTIFYING ANGLE PAIRS Use the diagram below. Tell whether the angles are vertical angles, a linear pair, or neither.

20. \( \angle 1 \) and \( \angle 4 \)  
21. \( \angle 1 \) and \( \angle 2 \)  
22. \( \angle 3 \) and \( \angle 5 \)  
23. \( \angle 2 \) and \( \angle 3 \)  
24. \( \angle 7, \angle 8, \) and \( \angle 9 \)  
25. \( \angle 5 \) and \( \angle 6 \)  
26. \( \angle 6 \) and \( \angle 7 \)  
27. \( \angle 5 \) and \( \angle 9 \)

28. ★ ALGEBRA Two angles form a linear pair. The measure of one angle is 4 times the measure of the other angle. Find the measure of each angle.

29. ERROR ANALYSIS Describe and correct the error made in finding the value of \( x \).

30. ★ MULTIPLE CHOICE The measure of one angle is \( 24^\circ \) greater than the measure of its complement. What are the measures of the angles?

   A. \( 24^\circ \) and \( 66^\circ \)  
   B. \( 24^\circ \) and \( 156^\circ \)  
   C. \( 33^\circ \) and \( 57^\circ \)  
   D. \( 78^\circ \) and \( 102^\circ \)

31. ★ ALGEBRA Find the values of \( x \) and \( y \).
REASONING  Tell whether the statement is always, sometimes, or never true. Explain your reasoning.

34. An obtuse angle has a complement.
35. A straight angle has a complement.
36. An angle has a supplement.
37. The complement of an acute angle is an acute angle.
38. The supplement of an acute angle is an obtuse angle.

FINDING ANGLES  \( \angle A \) and \( \angle B \) are complementary. Find \( m \angle A \) and \( m \angle B \).

39. \( m \angle A = (3x + 2)^\circ \)  \( m \angle B = (x - 4)^\circ \)
40. \( m \angle A = (15x + 3)^\circ \)  \( m \angle B = (5x - 13)^\circ \)
41. \( m \angle A = (11x + 24)^\circ \)  \( m \angle B = (x + 18)^\circ \)

FINDING ANGLES  \( \angle A \) and \( \angle B \) are supplementary. Find \( m \angle A \) and \( m \angle B \).

42. \( m \angle A = (8x + 100)^\circ \)  \( m \angle B = (2x + 50)^\circ \)
43. \( m \angle A = (2x - 20)^\circ \)  \( m \angle B = (3x + 5)^\circ \)
44. \( m \angle A = (6x + 72)^\circ \)  \( m \angle B = (2x + 28)^\circ \)

45. CHALLENGE  You are given that \( \angle GHJ \) is a complement of \( \angle RST \) and \( \angle RST \) is a supplement of \( \angle ABC \). Let \( m \angle GHJ \) be \( x \). What is the measure of \( \angle ABC \)? Explain your reasoning.

PROBLEM SOLVING

IDENTIFYING ANGLES  Tell whether the two angles shown are complementary, supplementary, or neither.

46. 47. 48.

ARCHITECTURE  The photograph shows the Rock and Roll Hall of Fame in Cleveland, Ohio. Use the photograph to identify an example type of the indicated type of angle pair.

49. Supplementary angles
50. Vertical angles
51. Linear pair
52. Adjacent angles

53. ★ SHORT RESPONSE  Use the photograph shown at the right. Given that \( \angle FGB \) and \( \angle BGC \) are supplementary angles, and \( m \angle FGB = 120^\circ \), explain how to find the measure of the complement of \( \angle BGC \).
54. **SHADOWS** The length of a shadow changes as the sun rises. In the diagram below, the length of \( \overline{CB} \) is the length of a shadow. The end of the shadow is the vertex of \( \angle ABC \), which is formed by the ground and the sun’s rays. Describe how the shadow and angle change as the sun rises.

![Diagram of a shadow and sun rays]

55. **MULTIPLE REPRESENTATIONS** Let \( x \) be an angle measure. Let \( y_1 \) be the measure of a complement of the angle and let \( y_2 \) be the measure of a supplement of the angle.

a. **Writing an Equation** Write equations for \( y_1 \) as a function of \( x \), and for \( y_2 \) as a function of \( x \). What is the domain of each function? Explain.

b. **Drawing a Graph** Graph each function and describe its range.

56. **CHALLENGE** The sum of the measures of two complementary angles exceeds the difference of their measures by 86°. Find the measure of each angle. Explain how you found the angle measures.
1.6 Classify Polygons

**Before**
You classified angles.

**Now**
You will classify polygons.

**Why?**
So you can find lengths in a floor plan, as in Ex. 32.

**Key Vocabulary**
- polygon
- side, vertex
- convex
- concave
- \(n\)-gon
- equilateral
- equiangular
- regular

**KEY CONCEPT**

**Identifying Polygons**

In geometry, a figure that lies in a plane is called a *plane figure*. A *polygon* is a closed plane figure with the following properties.

1. It is formed by three or more line segments called *sides*.
2. Each side intersects exactly two sides, one at each endpoint, so that no two sides with a common endpoint are collinear.

Each endpoint of a side is a *vertex* of the polygon. The plural of vertex is *vertices*. A polygon can be named by listing the vertices in consecutive order. For example, \(ABCDE\) and \(CDEAB\) are both correct names for the polygon at the right.

A polygon is *convex* if no line that contains a side of the polygon contains a point in the interior of the polygon. A polygon that is not convex is called *nonconvex* or *concave*.

**Example 1**

**Identify polygons**

Tell whether the figure is a polygon and whether it is *convex* or *concave*.

<table>
<thead>
<tr>
<th>a.</th>
<th>b.</th>
<th>c.</th>
<th>d.</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Shape a]</td>
<td>![Shape b]</td>
<td>![Shape c]</td>
<td>![Shape d]</td>
</tr>
</tbody>
</table>

**Solution**

a. Some segments intersect more than two segments, so it is not a polygon.
b. The figure is a convex polygon.
c. Part of the figure is not a segment, so it is not a polygon.
d. The figure is a concave polygon.
**CLASSIFYING POLYGONS** A polygon is named by the number of its sides.

<table>
<thead>
<tr>
<th>Number of sides</th>
<th>Type of polygon</th>
<th>Number of sides</th>
<th>Type of polygon</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>Triangle</td>
<td>8</td>
<td>Octagon</td>
</tr>
<tr>
<td>4</td>
<td>Quadrilateral</td>
<td>9</td>
<td>Nonagon</td>
</tr>
<tr>
<td>5</td>
<td>Pentagon</td>
<td>10</td>
<td>Decagon</td>
</tr>
<tr>
<td>6</td>
<td>Hexagon</td>
<td>12</td>
<td>Dodecagon</td>
</tr>
<tr>
<td>7</td>
<td>Heptagon</td>
<td></td>
<td>n-gon</td>
</tr>
</tbody>
</table>

The term $n$-gon, where $n$ is the number of a polygon’s sides, can also be used to name a polygon. For example, a polygon with 14 sides is a 14-gon.

In an equilateral polygon, all sides are congruent. In an equiangular polygon, all angles in the interior of the polygon are congruent. A regular polygon is a convex polygon that is both equilateral and equiangular.

**EXAMPLE 2** Classify polygons

Classify the polygon by the number of sides. Tell whether the polygon is equilateral, equiangular, or regular. Explain your reasoning.

a. ![Polygon](image)

Solution

a. The polygon has 6 sides. It is equilateral and equiangular, so it is a regular hexagon.

b. The polygon has 4 sides, so it is a quadrilateral. It is not equilateral or equiangular, so it is not regular.

c. The polygon has 12 sides, so it is a dodecagon. The sides are congruent, so it is equilateral. The polygon is not convex, so it is not regular.

**GUIDED PRACTICE** for Examples 1 and 2

1. Sketch an example of a convex heptagon and an example of a concave heptagon.

2. Classify the polygon shown at the right by the number of sides. Explain how you know that the sides of the polygon are congruent and that the angles of the polygon are congruent.
### Example 3

**Find side lengths**

**ALGEBRA** A table is shaped like a regular hexagon. The expressions shown represent side lengths of the hexagonal table. Find the length of a side.

**Solution**

First, write and solve an equation to find the value of \( x \). Use the fact that the sides of a regular hexagon are congruent.

\[
3x + 6 = 4x - 2 \quad \text{Write equation.}
\]

\[
6 = x - 2 \quad \text{Subtract 3x from each side.}
\]

\[
x = 8 \quad \text{Add 2 to each side.}
\]

Then find a side length. Evaluate one of the expressions when \( x = 8 \).

\[
3x + 6 = 3(8) + 6 = 30
\]

The length of a side of the table is 30 inches.

### Guided Practice

3. The expressions \( 8y^\circ \) and \( (9y - 15)^\circ \) represent the measures of two of the angles in the table in Example 3. Find the measure of an angle.

### Exercises

**1.6 Exercises**

**Skill Practice**

1. **VOCABULARY** Explain what is meant by the term \( n \)-gon.

2. **WRITING** Imagine that you can tie a string tightly around a polygon. If the polygon is convex, will the length of the string be equal to the distance around the polygon? What if the polygon is concave? Explain.

**Identifying Polygons** Tell whether the figure is a polygon. If it is not, explain why. If it is a polygon, tell whether it is convex or concave.

3.  
4.  
5.  
6.  

7. **MULTIPLE CHOICE** Which of the figures is a concave polygon?
**CLASSIFYING** Classify the polygon by the number of sides. Tell whether the polygon is equilateral, equiangular, or regular. Explain your reasoning.

10.

11.

12.

13.

14. **ERROR ANALYSIS** Two students were asked to draw a regular hexagon, as shown below. Describe the error made by each student.

   **Student A**

   **Student B**

15. **ALGEBRA** The lengths (in inches) of two sides of a regular pentagon are represented by the expressions $5x - 27$ and $2x - 6$. Find the length of a side of the pentagon.

16. **ALGEBRA** The expressions $(9x + 5)°$ and $(11x - 25)°$ represent the measures of two angles of a regular nonagon. Find the measure of an angle of the nonagon.

17. **ALGEBRA** The expressions $3x - 9$ and $23 - 5x$ represent the lengths (in feet) of two sides of an equilateral triangle. Find the length of a side.

**USING PROPERTIES** Tell whether the statement is always, sometimes, or never true.

18. A triangle is convex.

19. A decagon is regular.

20. A regular polygon is equiangular.

21. A circle is a polygon.

22. A polygon is a plane figure.

23. A concave polygon is regular.

**DRAWING** Draw a figure that fits the description.

24. A triangle that is not regular

25. A concave quadrilateral

26. A pentagon that is equilateral but not equiangular

27. An octagon that is equiangular but not equilateral

**ALGEBRA** Each figure is a regular polygon. Expressions are given for two side lengths. Find the value of $x$.

28. $x^2 + x$

29. $x^2 + 3x$

30. $x^2 - x + 190$
31. **CHALLENGE** Regular pentagonal tiles and triangular tiles are arranged in the pattern shown. The pentagonal tiles are all the same size and shape and the triangular tiles are all the same size and shape. Find the angle measures of the triangular tiles. *Explain* your reasoning.

![Pattern of pentagonal and triangular tiles](image)

32. **ARCHITECTURE** Longwood House, shown in the photograph on page 42, is located in Natchez, Mississippi. The diagram at the right shows the floor plan of a part of the house.

   a. Tell whether the red polygon in the diagram is *convex* or *concave*.
   b. Classify the red polygon and tell whether it appears to be regular.

![Diagram of floor plan](image)

33. **SIGNS** Each sign suggests a polygon. Classify the polygon by the number of sides. Tell whether it appears to be *equilateral*, *equiangular*, or *regular*.

   ![Signs](image)

34. 35. 36.

37. **MULTIPLE CHOICE** Two vertices of a regular quadrilateral are $A(0, 4)$ and $B(0, -4)$. Which of the following could be the other two vertices?

   - A) $C(4, 4)$ and $D(4, -4)$
   - B) $C(-4, 4)$ and $D(-4, -4)$
   - C) $C(8, -4)$ and $D(8, 4)$
   - D) $C(0, 8)$ and $D(0, -8)$

38. **MULTI-STEP PROBLEM** The diagram shows the design of a lattice made in China in 1850.

   a. Sketch five different polygons you see in the diagram. Classify each polygon by the number of sides.
   b. Tell whether each polygon you sketched is concave or convex, and whether the polygon appears to be equilateral, equiangular, or regular.

![Lattice design](image)
39. ★ SHORT RESPONSE The shape of the button shown is a regular polygon. The button has a border made of silver wire. How many millimeters of silver wire are needed for this border? Explain.

40. ★ EXTENDED RESPONSE A segment that joins two nonconsecutive vertices of a polygon is called a diagonal. For example, a quadrilateral has two diagonals, as shown below.

<table>
<thead>
<tr>
<th>Type of polygon</th>
<th>Diagram</th>
<th>Number of sides</th>
<th>Number of diagonals</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quadrilateral</td>
<td>![Diagram]</td>
<td>4</td>
<td>2</td>
</tr>
<tr>
<td>Pentagon</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>Hexagon</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>Heptagon</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
</tbody>
</table>

a. Copy and complete the table. Describe any patterns you see.
b. How many diagonals does an octagon have? a nonagon? Explain.
c. The expression \( \frac{n(n - 3)}{2} \) can be used to find the number of diagonals in an \( n \)-gon. Find the number of diagonals in a 60-gon.

41. LINE SYMMETRY A figure has line symmetry if it can be folded over exactly onto itself. The fold line is called the line of symmetry. A regular quadrilateral has four lines of symmetry, as shown. Find the number of lines of symmetry in each polygon.

a. A regular triangle
b. A regular pentagon
c. A regular hexagon
d. A regular octagon

42. CHALLENGE The diagram shows four identical squares lying edge-to-edge. Sketch all the different ways you can arrange four squares edge-to-edge. Sketch all the different ways you can arrange five identical squares edge-to-edge.

**Mixed Review**

Solve the equation.

43. \( \frac{1}{2}(35)b = 140 \) (p. 875)
44. \( x^2 = 144 \) (p. 882)
45. \( 3.14r^2 = 314 \) (p. 882)

Copy and complete the statement. (p. 886)

46. 500 m = \_\_ cm
47. 12 mi = \_\_ ft
48. 672 in. = \_\_ yd
49. 1200 km = \_\_ m
50. 4\( \frac{1}{2} \) ft = \_\_ yd
51. 3800 m = \_\_ km

Find the distance between the two points. (p. 15)

52. \( D(-13, 13), E(0, -12) \)
53. \( F(-9, -8), G(-9, 7) \)
54. \( H(10, 5), J(-2, -2) \)

**Extra Practice** for Lesson 1.6, p. 897

**Online Quiz** at classzone.com
1.7 Investigate Perimeter and Area

**MATERIALS**
- graph paper
- graphing calculator

**QUESTION**
How can you use a graphing calculator to find the smallest possible perimeter for a rectangle with a given area?

You can use the formulas below to find the perimeter $P$ and the area $A$ of a rectangle with length $l$ and width $w$.

\[ P = 2l + 2w \]
\[ A = lw \]

**EXPLORE**
Find perimeters of rectangles with fixed areas

**STEP 1** Draw rectangles
Draw different rectangles, each with an area of 36 square units. Use lengths of 2, 4, 6, 8, 10, 12, 14, 16, and 18 units.

**STEP 2** Enter data
Use the STATISTICS menu on a graphing calculator. Enter the rectangle lengths in List 1. Use the keystrokes below to calculate and enter the rectangle widths and perimeters in Lists 2 and 3.

Keystrokes for entering widths in List 2:

\[ 36 + \text{2nd} \ [\text{L1}] \ \text{ENTER} \]

Keystrokes for entering perimeters in List 3:

\[ 2 \ \times \ \text{2nd} \ [\text{L1}] + \text{2nd} \ [\text{L2}] \ \times \ \text{L2} \ \text{ENTER} \]

**STEP 3** Make a scatter plot
Make a scatter plot using the lengths from List 1 as the $x$-values and the perimeters from List 3 as the $y$-values. Choose an appropriate viewing window. Then use the trace feature to see the coordinates of each point.

How does the graph show which of your rectangles from Step 1 has the smallest perimeter?

**DRAW CONCLUSIONS**
Use your observations to complete these exercises

1. Repeat the steps above for rectangles with areas of 64 square units.
2. Based on the Explore and your results from Exercise 1, what do you notice about the shape of the rectangle with the smallest perimeter?
1.7 Find Perimeter, Circumference, and Area

**Before**
You classified polygons.

**Now**
You will find dimensions of polygons.

**Why?**
So you can use measures in science, as in Ex. 46.

**Key Vocabulary**
- perimeter, p. 923
- circumference, p. 923
- area, p. 923
- diameter, p. 923
- radius, p. 923

Recall that perimeter is the distance around a figure, circumference is the distance around a circle, and area is the amount of surface covered by a figure. Perimeter and circumference are measured in units of length, such as meters (m) and feet (ft). Area is measured in square units, such as square meters (m$^2$) and square feet (ft$^2$).

**KEY CONCEPT**
For Your Notebook

**Formulas for Perimeter $P$, Area $A$, and Circumference $C$**

<table>
<thead>
<tr>
<th>Square</th>
<th>Rectangle</th>
</tr>
</thead>
<tbody>
<tr>
<td>side length $s$</td>
<td>length $l$ and width $w$</td>
</tr>
<tr>
<td>$P = 4s$</td>
<td>$P = 2l + 2w$</td>
</tr>
<tr>
<td>$A = s^2$</td>
<td>$A = lw$</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Triangle</th>
<th>Circle</th>
</tr>
</thead>
<tbody>
<tr>
<td>side lengths $a$, $b$, and $c$, base $b$, and height $h$</td>
<td>diameter $d$ and radius $r$</td>
</tr>
<tr>
<td>$P = a + b + c$</td>
<td>$C = \pi d = 2\pi r$</td>
</tr>
<tr>
<td>$A = \frac{1}{2}bh$</td>
<td>$A = \pi r^2$</td>
</tr>
</tbody>
</table>

Pi ($\pi$) is the ratio of a circle’s circumference to its diameter.

**EXAMPLE 1** Find the perimeter and area of a rectangle

**BASKETBALL** Find the perimeter and area of the rectangular basketball court shown.

<table>
<thead>
<tr>
<th>Perimeter</th>
<th>Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>$P = 2l + 2w$</td>
<td>$A = lw$</td>
</tr>
<tr>
<td>$= 2(84) + 2(50)$</td>
<td>$= 84(50)$</td>
</tr>
<tr>
<td>$= 268$</td>
<td>$= 4200$</td>
</tr>
</tbody>
</table>

The perimeter is 268 feet and the area is 4200 square feet.
EXAMPLE 2  Find the circumference and area of a circle

TEAM PATCH You are ordering circular cloth patches for your soccer team's uniforms. Find the approximate circumference and area of the patch shown.

Solution

First find the radius. The diameter is 9 centimeters, so the radius is \( \frac{1}{2}(9) = 4.5 \) centimeters.

Then find the circumference and area. Use 3.14 to approximate the value of \( \pi \).

\[
C = 2\pi r = 2(3.14)(4.5) = 28.26 \\
A = \pi r^2 = 3.14(4.5)^2 = 63.585
\]

\( \checkmark \) The circumference is about 28.3 cm. The area is about 63.6 cm\(^2\).

GUIDED PRACTICE for Examples 1 and 2

Find the area and perimeter (or circumference) of the figure. If necessary, round to the nearest tenth.

1. \begin{align*}
\text{13 m} & \\
\text{5.7 m} & \\
\end{align*}

2. \begin{align*}
\text{1.6 cm} & \\
\end{align*}

3. \begin{align*}
\text{2 yd} & \\
\end{align*}

EXAMPLE 3  Standardized Test Practice

Triangle \( QRS \) has vertices \( Q(1, 2), \ R(4, 6), \) and \( S(5, 2) \). What is the approximate perimeter of triangle \( QRS \)?

\[
\begin{array}{c}
\text{A} \quad 8 \text{ units} \\
\text{B} \quad 8.3 \text{ units} \\
\text{C} \quad 13.1 \text{ units} \\
\text{D} \quad 25.4 \text{ units} \\
\end{array}
\]

Solution

First draw triangle \( QRS \) in a coordinate plane. Find the side lengths. Use the Distance Formula to find \( QR \) and \( RS \).

\[
QS = |5 - 1| = 4 \text{ units} \\
QR = \sqrt{(4 - 1)^2 + (6 - 2)^2} = \sqrt{25} = 5 \text{ units} \\
RS = \sqrt{(5 - 4)^2 + (2 - 6)^2} = \sqrt{17} \approx 4.1 \text{ units}
\]

Then find the perimeter.

\[
P = QS + QR + RS \approx 4 + 5 + 4.1 = 13.1 \text{ units}
\]

\( \checkmark \) The correct answer is C.  \( \text{A} \quad \text{B} \quad \text{C} \quad \text{D} \)
**Example 4** Solve a multi-step problem

**SKATING RINK** An ice-resurfacing machine is used to smooth the surface of the ice at a skating rink. The machine can resurface about 270 square yards of ice in one minute.

About how many minutes does it take the machine to resurface a rectangular skating rink that is 200 feet long and 90 feet wide?

**Solution**

The machine can resurface the ice at a rate of 270 square yards per minute. So, the amount of time it takes to resurface the skating rink depends on its area.

**STEP 1** Find the area of the rectangular skating rink.

Area \( = lw = 200(90) = 18,000 \text{ ft}^2 \)

The resurfacing rate is in square yards per minute. Rewrite the area of the rink in square yards. There are 3 feet in 1 yard, and \( 3^2 = 9 \) square feet in 1 square yard.

\[
18,000 \text{ ft}^2 \cdot \frac{1 \text{ yd}^2}{9 \text{ ft}^2} = 2000 \text{ yd}^2 \quad \text{Use unit analysis.}
\]

**STEP 2** Write a verbal model to represent the situation. Then write and solve an equation based on the verbal model.

Let \( t \) represent the total time (in minutes) needed to resurface the skating rink.

\[
\text{Area of rink (yd}^2) = \text{Resurfacing rate (yd}^2 \text{ per min)} \times \text{Total time (min)}
\]

\[
2000 = 270 \cdot t \quad \text{Substitute.}
\]

\[
7.4 \approx t \quad \text{Divide each side by 270.}
\]

\( \checkmark \) It takes the ice-resurfacing machine about 7 minutes to resurface the skating rink.

**Guided Practice** for Examples 3 and 4

4. Describe how to find the height from \( F \) to \( \overline{EG} \) in the triangle at the right.

5. Find the perimeter and the area of the triangle shown at the right.

6. **WHAT IF?** In Example 4, suppose the skating rink is twice as long and twice as wide. Will it take an ice-resurfacing machine twice as long to resurface the skating rink? *Explain* your reasoning.
**EXAMPLE 5**  **Find unknown length**

The base of a triangle is 28 meters. Its area is 308 square meters. Find the height of the triangle.

Solution

\[ A = \frac{1}{2}bh \]

Write formula for the area of a triangle.

\[ 308 = \frac{1}{2}(28)h \]

Substitute 308 for \( A \) and 28 for \( b \).

\[ 22 = h \]

Solve for \( h \).

The height is 22 meters.

**GUIDED PRACTICE** for Example 5

7. The area of a triangle is 64 square meters, and its height is 16 meters. Find the length of its base.

---

**1.7 EXERCISES**

1. **VOCABULARY** How are the diameter and radius of a circle related?

2. **WRITING** Describe a real-world situation in which you would need to find a perimeter, and a situation in which you would need to find an area. What measurement units would you use in each situation?

3. **ERROR ANALYSIS** Describe and correct the error made in finding the area of a triangle with a height of 9 feet and a base of 52 feet.

\[ A = \frac{1}{2}(9)(52) = 468 \text{ ft}^2 \]

**PERIMETER AND AREA** Find the perimeter and area of the shaded figure.

4. **EXAMPLE 1** on p. 49 for Exs. 3–10

5.

26. **MULTIPLE CHOICE** A triangle has an area of 2.25 square feet. What is the area of the triangle in square inches?

A. 27 in.\(^2\)  
B. 54 in.\(^2\)  
C. 144 in.\(^2\)  
D. 324 in.\(^2\)

**UNKNOWN MEASURES** Use the information about the figure to find the indicated measure.

27. Area = 261 m\(^2\)  
Find the height \(h\).

28. Area = 66 in.\(^2\)  
Find the base \(b\).

29. Perimeter = 25 in.  
Find the width \(w\).
30. **UNKNOWN MEASURE** The width of a rectangle is 17 inches. Its perimeter is 102 inches. Find the length of the rectangle.

31. **ALGEBRA** The area of a rectangle is 18 square inches. The length of the rectangle is twice its width. Find the length and width of the rectangle.

32. **ALGEBRA** The area of a triangle is 27 square feet. Its height is three times the length of its base. Find the height and base of the triangle.

33. **ALGEBRA** Let $x$ represent the side length of a square. Find a regular polygon with side length $x$ whose perimeter is twice the perimeter of the square. Find a regular polygon with side length $x$ whose perimeter is three times the length of the square. *Explain* your thinking.

**FINDING SIDE LENGTHS** Find the side length of the square with the given area. Write your answer as a radical in simplest form.

34. $A = 184 \text{ cm}^2$
35. $A = 346 \text{ in.}^2$
36. $A = 1008 \text{ mi}^2$
37. $A = 1050 \text{ km}^2$

38. **★ SHORT RESPONSE** In the diagram, the diameter of the yellow circle is half the diameter of the red circle. What fraction of the area of the red circle is *not* covered by the yellow circle? *Explain*.

39. **CHALLENGE** The area of a rectangle is 30 cm$^2$ and its perimeter is 26 cm. Find the length and width of the rectangle.

---

**PROBLEM SOLVING**

40. **WATER LILIES** The giant Amazon water lily has a lily pad that is shaped like a circle. Find the circumference and area of a lily pad with a diameter of 60 inches. Round your answers to the nearest tenth.

41. **LAND** You are planting grass on a rectangular plot of land. You are also building a fence around the edge of the plot. The plot is 45 yards long and 30 yards wide. How much area do you need to cover with grass seed? How many feet of fencing do you need?

42. **MULTI-STEP PROBLEM** Chris is installing a solar panel. The maximum amount of power the solar panel can generate in a day depends in part on its area. On a sunny day in the city where Chris lives, each square meter of the panel can generate up to 125 watts of power. The flat rectangular panel is 84 centimeters long and 54 centimeters wide.
   a. Find the area of the solar panel in square meters.
   b. What is the maximum amount of power (in watts) that the panel could generate if its area was 1 square meter? 2 square meters? *Explain*.
   c. Estimate the maximum amount of power Chris’s solar panel can generate. *Explain* your reasoning.
43. **MULTI-STEP PROBLEM** The eight spokes of a ship's wheel are joined at the wheel's center and pass through a large wooden circle, forming handles on the outside of the circle. From the wheel's center to the tip of the handle, each spoke is 21 inches long.

a. The circumference of the outer edge of the large wooden circle is 94 inches. Find the radius of the outer edge of the circle to the nearest inch.

b. Find the length \(x\) of a handle on the wheel. *Explain.*

44. **MULTIPLE REPRESENTATIONS** Let \(x\) represent the length of a side of a square. Let \(y_1\) and \(y_2\) represent the perimeter and area of that square.

a. **Making a Table** Copy and complete the table.

<table>
<thead>
<tr>
<th>Length, (x)</th>
<th>1</th>
<th>2</th>
<th>5</th>
<th>10</th>
<th>25</th>
</tr>
</thead>
<tbody>
<tr>
<td>Perimeter, (y_1)</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>Area, (y_2)</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
</tbody>
</table>

b. **Making a Graph** Use the completed table to write two sets of ordered pairs: \((x, y_1)\) and \((x, y_2)\). Graph each set of ordered pairs.

c. **Analyzing Data** *Describe* any patterns you see in the table from part (a) and in the graphs from part (b).

45. **★ EXTENDED RESPONSE** The photograph at the right shows the Crown Fountain in Chicago, Illinois. At this fountain, images of faces appear on a large screen. The images are created by light-emitting diodes (LEDs) that are clustered in groups called modules. The LED modules are arranged in a rectangular grid.

a. The rectangular grid is approximately 7 meters wide and 15.2 meters high. Find the area of the grid.

b. Suppose an LED module is a square with a side length of 4 centimeters. How many rows and how many columns of LED modules would be needed to make the Crown Fountain screen? *Explain* your reasoning.

46. **ASTRONOMY** The diagram shows a gap in Saturn’s circular rings. This gap is known as the *Cassini division*. In the diagram, the red circle represents the ring that borders the inside of the Cassini division. The yellow circle represents the ring that borders the outside of the division.

a. The radius of the red ring is 115,800 kilometers. The radius of the yellow ring is 120,600 kilometers. Find the circumference of the red ring and the circumference of the yellow ring. Round your answers to the nearest hundred kilometers.

b. Compare the circumferences of the two rings. About how many kilometers greater is the yellow ring’s circumference than the red ring’s circumference?
47. **CHALLENGE** In the diagram at the right, how many times as great is the area of the circle as the area of the square? Explain your reasoning.

48. **ALGEBRA** You have 30 yards of fencing with which to make a rectangular pen. Let \( x \) be the length of the pen.
   a. Write an expression for the width of the pen in terms of \( x \). Then write a formula for the area \( y \) of the pen in terms of \( x \).
   b. You want the pen to have the greatest possible area. What length and width should you use? Explain your reasoning.

---

**Mixed Review**

49. Use the equation \( y = 2x + 1 \) to copy and complete the table of values. (p. 884)

<table>
<thead>
<tr>
<th>( x )</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>( y )</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

50. Each number in a pattern is 6 less than the previous number. The first number in the pattern is 100. Write the next three numbers. (p. 894)

In Exercises 51 and 52, draw a diagram to represent the problem. Then find the indicated measure. (p. 42)

51. The lengths (in inches) of two sides of a regular triangle are given by the expressions \( 5x + 40 \) and \( 8x - 13 \). Find the length of a side of the triangle.

52. The measures of two angles of an equiangular hexagon are \( 12x^\circ \) and \( (10x + 20)^\circ \). Find the measure of an angle of the hexagon.

---

**Quiz for Lessons 1.6–1.7**

Tell whether the figure is a polygon. If it is not, explain why. If it is a polygon, tell whether it is convex or concave. (p. 42)

1.  
2.  
3.  

Find the perimeter and area of the shaded figure. (p. 49)

4.  
5.  
6.  

7. **GARDENING** You are spreading wood chips on a rectangular garden. The garden is \( 3\frac{1}{2} \) yards long and \( 2\frac{1}{2} \) yards wide. One bag of wood chips covers 10 square feet. How many bags of wood chips do you need? (p. 49)
**Another Way to Solve Example 4, page 51**

**MULTIPLE REPRESENTATIONS** In Example 4 on page 51, you saw how to use an equation to solve a problem about a skating rink. *Looking for a pattern* can help you write an equation.

**PROBLEM**

SKATING RINK An ice-resurfacing machine is used to smooth the surface of the ice at a skating rink. The machine can resurface about 270 square yards of ice in one minute. About how many minutes does it take the machine to resurface a rectangular skating rink that is 200 feet long and 90 feet wide?

**METHOD**

Using a Pattern You can use a table to look for a pattern.

**STEP 1** Find the area of the rink in square yards. In Example 4 on page 51, you found that the area was 2000 square yards.

**STEP 2** Make a table that shows the relationship between the time spent resurfacing the ice and the area resurfaced. Look for a pattern.

<table>
<thead>
<tr>
<th>Time (min)</th>
<th>Area resurfaced (yd²)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1 • 270 = 270</td>
</tr>
<tr>
<td>2</td>
<td>2 • 270 = 540</td>
</tr>
<tr>
<td><em>t</em></td>
<td><em>t</em> • 270 = <em>A</em></td>
</tr>
</tbody>
</table>

**STEP 3** Use the equation to find the time *t* (in minutes) that it takes the machine to resurface 2000 square yards of ice.

- It takes about 7 minutes.

**PRACTICE**

1. **PLOWING** A square field is \(\frac{1}{8}\) mile long on each side. A tractor can plow about 180,000 square feet per hour. To the nearest tenth of an hour, about how long does it take to plow the field? (1 mi = 5280 ft.)

2. **ERROR ANALYSIS** To solve Exercise 1 above, a student writes the equation \(660 = 180,000t\), where *t* is the number of hours spent plowing. *Describe* and correct the error in the equation.

3. **PARKING LOT** A rectangular parking lot is 110 yards long and 45 yards wide. It costs about \$60 to pave each square foot of the parking lot with asphalt. About how much will it cost to pave the parking lot?

4. **WALKING** A circular path has a diameter of 120 meters. Your average walking speed is 4 kilometers per hour. About how many minutes will it take you to walk around the path 3 times?
1. **MULTI-STEP PROBLEM** You are covering the rectangular roof of a shed with shingles. The roof is a rectangle that is 4 yards long and 3 yards wide. Asphalt shingles cost $0.75 per square foot and wood shingles cost $1.15 per square foot.
   a. Find the area of the roof in square feet.
   b. Find the cost of using asphalt shingles and the cost of using wood shingles.
   c. About how much more will you pay to use wood shingles for the roof?

2. **OPEN-ENDED** In the window below, name a convex polygon and a concave polygon. Classify each of your polygons by the number of sides.

3. **EXTENDED RESPONSE** The diagram shows a decoration on a house. In the diagram, \( \angle HGD \) and \( \angle HGF \) are right angles, \( m\angle DGB = 21^\circ, m\angle HBG = 55^\circ \), \( \angle DGB \equiv \angle FGC \), and \( \angle HBG \equiv \angle HCG \).
   a. List two pairs of complementary angles and five pairs of supplementary angles.
   b. Find \( m\angle FGC \), \( m\angle BGH \), and \( m\angle HGC \). Explain your reasoning.
   c. Find \( m\angle HCG \), \( m\angle DBG \), and \( m\angle FCG \). Explain your reasoning.

4. **GRIDDED ANSWER** \( \angle 1 \) and \( \angle 2 \) are supplementary angles, and \( \angle 1 \) and \( \angle 3 \) are complementary angles. Given \( m\angle 1 \) is 28° less than \( m\angle 2 \), find \( m\angle 3 \) in degrees.

5. **EXTENDED RESPONSE** You use bricks to outline the borders of the two gardens shown below. Each brick is 10 inches long.
   a. You lay the bricks end-to-end around the border of each garden. How many bricks do you need for each garden? Explain.
   b. The bricks are sold in bundles of 100. How many bundles should you buy? Explain.

6. **SHORT RESPONSE** The frame of a mirror is a regular pentagon made from pieces of bamboo. Use the diagram to find how many feet of bamboo are used in the frame.

7. **GRIDDED ANSWER** As shown in the diagram, a skateboarder tilts one end of a skateboard. Find \( m\angle ZWX \) in degrees.

8. **SHORT RESPONSE** Use the diagram below.
   a. Find the perimeter of quadrilateral \( ABCD \).
   b. Find the area of triangle \( ABC \) and the area of triangle \( ADC \). What is the area of quadrilateral \( ABCD \)? Explain.
**Big Idea 1**

**Describing Geometric Figures**

You learned to identify and classify geometric figures.

<table>
<thead>
<tr>
<th>Point A</th>
<th>Line $AB$ ($\overrightarrow{AB}$)</th>
<th>Plane $M$</th>
<th>Segment $AB$ ($\overline{AB}$)</th>
</tr>
</thead>
<tbody>
<tr>
<td>$A$</td>
<td>$A$ to $B$</td>
<td>$M$</td>
<td>$A$ to $B$</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Ray $AB$ ($\overrightarrow{AB}$)</th>
<th>Angle $A$ ($\angle A$, $\angle BAC$, or $\angle CAB$)</th>
<th>Polygon</th>
</tr>
</thead>
<tbody>
<tr>
<td>$A$ to $B$</td>
<td>$A$ to $B$ to $C$</td>
<td>Quadrilateral $ABCD$</td>
</tr>
</tbody>
</table>

**Big Idea 2**

**Measuring Geometric Figures**

**SEGMENTS** You measured segments in the coordinate plane.

- **Distance Formula**
  
  Distance between $A(x_1, y_1)$ and $B(x_2, y_2)$:
  
  $$AB = \sqrt{(x_1 - x_2)^2 + (y_1 - y_2)^2}$$

- **Midpoint Formula**
  
  Coordinates of midpoint $M$ of $\overline{AB}$, with endpoints $A(x_1, y_1)$ and $B(x_2, y_2)$:
  
  $$M\left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right)$$

**ANGLES** You classified angles and found their measures.

- **Complementary angles**
  
  $m\angle 1 + m\angle 2 = 90^\circ$

- **Supplementary angles**
  
  $m\angle 3 + m\angle 4 = 180^\circ$

**Big Idea 3**

**Understanding Equality and Congruence**

Congruent segments have equal lengths. Congruent angles have equal measures.

- $\overline{AB} = \overline{BC}$ and $\overline{AB} = \overline{BC}$
- $\angle JKL = \angle LKM$ and $m\angle JKL = m\angle LKM$
VOCABULARY EXERCISES

1. Copy and complete: Points A and B are the _?_ of $$\overline{AB}$$.

2. Draw an example of a _linear pair_.

3. If Q is between points P and R on $$\overrightarrow{PR}$$, and $$PQ = QR$$, then Q is the _?_ of $$\overrightarrow{PR}$$.

REVIEW EXAMPLES AND EXERCISES

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 1.

1.1 Identify Points, Lines, and Planes

**Example**

Use the diagram shown at the right.

Another name for $$\overrightarrow{CD}$$ is line m.

Points A, B, and C are collinear.

Points A, B, C, and F are coplanar.

**Exercises**

4. Give another name for line g.

5. Name three points that are _not_ collinear.

6. Name four points that are coplanar.

7. Name a pair of opposite rays.

8. Name the intersection of line h and plane M.
1.2 Use Segments and Congruence  

**Example**

Find the length of $\overline{HJ}$.

$GJ = GH + HJ$ \hspace{1cm} \text{Segment Addition Postulate}

$27 = 18 + HJ$ \hspace{1cm} \text{Substitute 27 for } GJ \text{ and 18 for } GH.

$9 = HJ$ \hspace{1cm} \text{Subtract 18 from each side.}

**Exercises**

Find the indicated length.

10. Find $NP$.

11. Find $XY$.

12. The endpoints of $\overline{DE}$ are $D(-4, 11)$ and $E(-4, -13)$. The endpoints of $\overline{GH}$ are $G(-14, 5)$ and $H(-9, 5)$. Are $\overline{DE}$ and $\overline{GH}$ congruent? Explain.

1.3 Use Midpoint and Distance Formulas  

**Example**

$\overline{EF}$ has endpoints $E(1, 4)$ and $F(3, 2)$. Find (a) the length of $\overline{EF}$ rounded to the nearest tenth of a unit, and (b) the coordinates of the midpoint $M$ of $\overline{EF}$.

a. Use the Distance Formula.

$EF = \sqrt{(3 - 1)^2 + (2 - 4)^2} = \sqrt{2^2 + (-2)^2} = \sqrt{8} \approx 2.8 \text{ units}$

b. Use the Midpoint Formula.

$M\left(\frac{1 + 3}{2}, \frac{4 + 2}{2}\right) = M(2, 3)$

**Exercises**

13. Point $M$ is the midpoint of $\overline{JK}$. Find $JK$ when $JM = 6x - 7$ and $MK = 2x + 3$.

In Exercises 14–17, the endpoints of a segment are given. Find the length of the segment rounded to the nearest tenth. Then find the coordinates of the midpoint of the segment.

14. $A(2, 5)$ and $B(4, 3)$

15. $F(1, 7)$ and $G(6, 0)$

16. $H(-3, 9)$ and $J(5, 4)$

17. $K(10, 6)$ and $L(0, -7)$

18. Point $C(3, 8)$ is the midpoint of $\overline{AB}$. One endpoint is $A(-1, 5)$. Find the coordinates of endpoint $B$.

19. The endpoints of $\overline{EF}$ are $E(2, 3)$ and $F(8, 11)$. The midpoint of $\overline{EF}$ is $M$. Find the length of $\overline{EM}$.
**Measure and Classify Angles**

**Example**

Given that $m \angle YXV$ is $60^\circ$, find $m \angle YXZ$ and $m \angle ZXV$.

**Step 1** Find the value of $x$.

\[
60^\circ = (2x + 11)^\circ + (x + 13)^\circ
\]

\[
x = 12
\]

**Step 2** Evaluate the given expressions when $x = 12$.

\[
m \angle YXZ = (2x + 11)^\circ = (2 \cdot 12 + 11)^\circ = 35^\circ
\]

\[
m \angle ZXV = (x + 13)^\circ = (12 + 13)^\circ = 25^\circ
\]

**Exercises**

20. In the diagram shown at the right, $m \angle LMN = 140^\circ$. Find $m \angle PMN$.

21. $\overline{VZ}$ bisects $\angle UVW$, and $m \angle UVZ = 81^\circ$. Find $m \angle UVW$. Then classify $\angle UVW$ by its angle measure.

**Describe Angle Pair Relationships**

**Example**

a. $\angle 1$ and $\angle 2$ are complementary angles. Given that $m \angle 1 = 37^\circ$, find $m \angle 2$.

\[
m \angle 2 = 90^\circ - m \angle 1 = 90^\circ - 37^\circ = 53^\circ
\]

b. $\angle 3$ and $\angle 4$ are supplementary angles. Given that $m \angle 3 = 106^\circ$, find $m \angle 4$.

\[
m \angle 4 = 180^\circ - m \angle 3 = 180^\circ - 106^\circ = 74^\circ
\]

**Exercises**

22. $m \angle 1 = 12^\circ$  
23. $m \angle 1 = 83^\circ$  
24. $m \angle 1 = 46^\circ$  
25. $m \angle 1 = 2^\circ$

$\angle 3$ and $\angle 4$ are supplementary angles. Given the measure of $\angle 3$, find $m \angle 4$.

26. $m \angle 3 = 116^\circ$  
27. $m \angle 3 = 56^\circ$  
28. $m \angle 3 = 89^\circ$  
29. $m \angle 3 = 12^\circ$

30. $\angle 1$ and $\angle 2$ are complementary angles. Find the measures of the angles when $m \angle 1 = (x - 10)^\circ$ and $m \angle 2 = (2x + 40)^\circ$.

31. $\angle 1$ and $\angle 2$ are supplementary angles. Find the measures of the angles when $m \angle 1 = (3x + 50)^\circ$ and $m \angle 2 = (4x + 32)^\circ$. Then classify $\angle 1$ by its angle measure.
1.6 Classify Polygons

**Example**

Classify the polygon by the number of sides. Tell whether it is equilateral, equiangular, or regular. *Explain.*

The polygon has four sides, so it is a quadrilateral. It is not equiangular or equilateral, so it is not regular.

**Exercises**

Classify the polygon by the number of sides. Tell whether it is equilateral, equiangular, or regular. *Explain.*

32. \[ \text{Triangle: } 2 \text{ cm} \times 2 \text{ cm} \times 2 \text{ cm} \]

33. \[ \text{Quadrilateral: } 2.5 \text{ m} \times 2.5 \text{ m} \times 1 \text{ m} \times 2.5 \text{ m} \]

34. \[ \text{Quadrilateral: } \]

35. Pentagon \( ABCDE \) is a regular polygon. The length of \( BC \) is represented by the expression \( 5x - 4 \). The length of \( DE \) is represented by the expression \( 2x + 11 \). Find the length of \( AB \).

1.7 Find Perimeter, Circumference, and Area

**Example**

The diameter of a circle is 10 feet. Find the circumference and area of the circle. Round to the nearest tenth.

The radius is half of the length of the diameter, so \( r = \frac{1}{2}(10) = 5 \) ft.

<table>
<thead>
<tr>
<th>Circumference</th>
<th>Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>( C = 2\pi r \approx 2(3.14)(5) = 31.4 \text{ ft} )</td>
<td>( A = \pi r^2 \approx 3.14(5^2) = 78.5 \text{ ft}^2 )</td>
</tr>
</tbody>
</table>

**Exercises**

In Exercises 36–38, find the perimeter (or circumference) and area of the figure described. If necessary, round to the nearest tenth.

36. Circle with diameter 15.6 meters

37. Rectangle with length \( 4 \frac{1}{2} \text{ inches} \) and width \( 2 \frac{1}{2} \text{ inches} \)

38. Triangle with vertices \( U(1, 2), V(-8, 2), \) and \( W(-4, 6) \)

39. The height of a triangle is 18.6 meters. Its area is 46.5 square meters. Find the length of the triangle’s base.

40. The area of a circle is 320 square meters. Find the radius of the circle. Then find the circumference. Round your answers to the nearest tenth.
Use the diagram to decide whether the statement is true or false.

1. Point A lies on line \( m \).
2. Point D lies on line \( n \).
3. Points B, C, E, and Q are coplanar.
4. Points C, E, and B are collinear.
5. Another name for plane \( G \) is plane \( QEC \).

Find the indicated length.

6. Find \( HJ \).
7. Find \( BC \).
8. Find \( XZ \).

In Exercises 9–11, find the distance between the two points.

9. \( T(3, 4) \) and \( W(2, 7) \)
10. \( C(5, 10) \) and \( D(6, -1) \)
11. \( M(-8, 0) \) and \( N(-1, 3) \)

12. The midpoint of \( \overline{AB} \) is \( M(9, 7) \). One endpoint is \( A(3, 9) \). Find the coordinates of endpoint \( B \).
13. Line \( t \) bisects \( \overline{CD} \) at point \( M \), \( CM = 3x \), and \( MD = 27 \). Find \( CD \).

In Exercises 14 and 15, use the diagram.

14. Trace the diagram and extend the rays. Use a protractor to measure \( \angle GHJ \). Classify it as acute, obtuse, right, or straight.
15. Given \( m \angle KHJ = 90^\circ \), find \( m \angle LHJ \).

16. The measure of \( \angle QRT \) is \( 154^\circ \), and \( RS \) bisects \( \angle QRT \). What are the measures of \( \angle QRS \) and \( \angle SRT \)?

In Exercises 17 and 18, use the diagram at the right.

17. Name four linear pairs.
18. Name two pairs of vertical angles.

19. The measure of an angle is \( 64^\circ \). What is the measure of its complement? What is the measure of its supplement?

20. A convex polygon has half as many sides as a concave 10-gon. Draw the concave polygon and the convex polygon. Classify the convex polygon by the number of sides it has.

21. Find the perimeter of the regular pentagon shown at the right.

22. CARPET You can afford to spend $300 to carpet a room that is 5.5 yards long and 4.5 yards wide. The cost to purchase and install the carpet you like is $1.50 per square foot. Can you afford to buy this carpet? Explain.
**Example 1** Solve linear equations

Solve the equation \(-3(x + 5) + 4x = 25\).

\[
\begin{align*}
-3(x + 5) + 4x &= 25 \\
-3x - 15 + 4x &= 25 \\
x - 15 &= 25 \\
x &= 40
\end{align*}
\]

Write original equation.

Use the Distributive Property.

Group and combine like terms.

Add 15 to each side.

**Example 2** Solve a real-world problem

**Membership Costs** A health club charges an initiation fee of $50. Members then pay $45 per month. You have $400 to spend on a health club membership. For how many months can you afford to be a member?

Let \( n \) represent the number of months you can pay for a membership.

\[
400 = 50 + 45n \quad \text{Substitute.}
\]

\[
350 = 45n \quad \text{Subtract 50 from each side.}
\]

\[
7.8 = n \quad \text{Divide each side by 45.}
\]

You can afford to be a member at the health club for 7 months.

**Exercises**

**Example 1** for Exs. 1–9

Solve the equation.

1. \( 9y + 1 - y = 49 \)
2. \( 5z + 7 + z = -8 \)
3. \( -4(2 - t) = -16 \)
4. \( 7a - 2(a - 1) = 17 \)
5. \( \frac{4x}{3} + 2(3 - x) = 5 \)
6. \( \frac{2x - 5}{7} = 4 \)
7. \( 9c - 11 = -c + 29 \)
8. \( 2(0.3r + 1) = 23 - 0.1r \)
9. \( 5(k + 2) = 3(k - 4) \)

**Example 2** for Exs. 10–12

10. **Gift Certificate** You have a $50 gift certificate at a store. You want to buy a book that costs $8.99 and boxes of stationery for your friends. Each box costs $4.59. How many boxes can you buy with your gift certificate?

11. **Catering** It costs $350 to rent a room for a party. You also want to hire a caterer. The caterer charges $8.75 per person. How many people can come to the party if you have $500 to spend on the room and the caterer?

12. **Jewelry** You are making a necklace out of glass beads. You use one bead that is \( \frac{11}{2} \) inches long and smaller beads that are each \( \frac{3}{4} \) inch long. The necklace is 18 inches long. How many smaller beads do you need?
You want to rent portable flooring to set up a dance floor for a party. The table below shows the cost of renting portable flooring from a local company. You want to have a rectangular dance floor that is 5 yards long and 4 yards wide. How much will it cost to rent flooring? Explain your reasoning.

**Problem**

Below are sample solutions to the problem. Read each solution and the comments in blue to see why the sample represents full credit, partial credit, or no credit.

**Sample 1: Full credit solution**

Find the area of the dance floor. Area = \( lw = 5(4) = 20 \text{ yd}^2 \).
Then convert this area to square feet. There are \( 3^2 = 9 \text{ ft}^2 \) in 1 \( \text{yd}^2 \).

\[
20 \text{ yd}^2 \cdot \frac{9 \text{ ft}^2}{1 \text{ yd}^2} = 180 \text{ ft}^2
\]

Because 180 \( \text{ft}^2 \) is between 100 \( \text{ft}^2 \) and 200 \( \text{ft}^2 \), the price of flooring is \$6.25 per square foot. Multiply the price per square foot by the area.

\[
\text{Total cost} = \frac{\$6.25}{1 \text{ ft}^2} \cdot 180 \text{ ft}^2 = $1125
\]

It will cost \$1125 to rent flooring.

**Sample 2: Partial credit solution**

The area of the dance floor is \( 5(4) = 20 \text{ square yards} \). Convert this area to square feet. There are 3 feet in 1 yard.

\[
20 \text{ yd}^2 \cdot \frac{3 \text{ ft}^2}{1 \text{ yd}^2} = 60 \text{ ft}^2
\]

The flooring will cost \$6.50 per square foot because 60 \( \text{ft}^2 \) is less than 100 \( \text{ft}^2 \). To find the total cost, multiply the area by the cost per square foot.

\[
60 \text{ ft}^2 \cdot \frac{\$6.50}{1 \text{ ft}^2} = $390
\]

It will cost \$390 to rent flooring.
SAMPLE 3: Partial credit solution

The area of the room is 180 ft², so the flooring price is $6.25. The total cost is $180 \times 6.25 = 1125.

It will cost $1125 to rent flooring.

SAMPLE 4: No credit solution

Floor area = 4 \times 5 = 20.

Cost = 20 \times 650 = 13,000.

It will cost $13,000 to rent flooring.

PRACTICE Apply the Scoring Rubric

Use the rubric on page 66 to score the solution to the problem below as full credit, partial credit, or no credit. Explain your reasoning.

PROBLEM You have 450 daffodil bulbs. You divide a 5 yard by 2 yard rectangular garden into 1 foot by 1 foot squares. You want to plant the same number of bulbs in each square. How many bulbs should you plant in each square? Explain your reasoning.

1. First find the area of the plot in square feet. There are 3 feet in 1 yard, so the length is 5(3) = 15 feet, and the width is 2(3) = 6 feet. The area is 15(6) = 90 square feet. The garden plot can be divided into 90 squares with side length 1 foot. Divide 450 by 90 to get 5 bulbs in each square.

2. The area of the garden plot is 5(2) = 10 square yards. There are 3 feet in 1 yard, so you can multiply 10 square yards by 3 to get an area of 30 square feet. You can divide the garden plot into 30 squares. To find how many bulbs per square, divide 450 bulbs by 30 to get 15 bulbs.

3. Divide 450 by the area of the plot: 450 bulbs ÷ 10 yards = 45 bulbs. You should plant 45 bulbs in each square.

4. Multiply the length and width by 3 feet to convert yards to feet. The area is 15 ft × 6 ft = 90 ft². Divide the garden into 90 squares.
1. It costs $2 per square foot to refinish a hardwood floor if the area is less than 300 square feet, and $1.75 per square foot if the area is greater than or equal to 300 square feet. How much does it cost to refinish a rectangular floor that is 6 yards long and 4.5 yards wide? Explain your reasoning.

2. As shown below, the library (point L) and the Town Hall (point T) are on the same straight road. Your house is on the same road, halfway between the library and the Town Hall. Let point H mark the location of your house. Find the coordinates of H and the approximate distance between the library and your house. Explain your reasoning.

3. The water in a swimming pool evaporates over time if the pool is not covered. In one year, a swimming pool can lose about 17.6 gallons of water for every square foot of water that is exposed to air. About how much water would evaporate in one year from the surface of the water in the pool shown? Explain your reasoning.

4. A company is designing a cover for a circular swimming pool. The diameter of the pool is 20 feet. The material for the cover costs $4 per square yard. About how much will it cost the company to make the pool cover? Explain your reasoning.

5. You are making a mat with a fringed border. The mat is shaped like a regular pentagon, as shown below. Fringe costs $1.50 per yard. How much will the fringe for the mat cost? Explain your reasoning.

6. Angles A and B are complementary angles, $m\angle A = (2x-4)^\circ$, and $m\angle B = (4x-8)^\circ$. Find the measure of the supplement of $\angle B$. Explain your reasoning.

7. As shown on the map, you have two ways to drive from Atkins to Canton. You can either drive through Baxton, or you can drive directly from Atkins to Canton. About how much shorter is the trip from Atkins to Canton if you do not go through Baxton? Explain your reasoning.

8. A jeweler is making pairs of gold earrings. For each earring, the jeweler will make a circular hoop like the one shown below. The jeweler has 2 meters of gold wire. How many pairs of gold hoops can the jeweler make? Justify your reasoning.
MULTIPLE CHOICE

9. The midpoint of \( AB \) is \( M(4, -2) \). One endpoint is \( A(-2, 6) \). What is the length of \( AB \)?
   \[ \text{A} \quad 5 \text{ units} \]
   \[ \text{B} \quad 10 \text{ units} \]
   \[ \text{C} \quad 20 \text{ units} \]
   \[ \text{D} \quad 28 \text{ units} \]

10. The perimeter of a rectangle is 85 feet. The length of the rectangle is 4 feet more than its width. Which equation can be used to find the width \( w \) of the rectangle?
   \[ \text{A} \quad 85 = 2(w + 4) \]
   \[ \text{B} \quad 85 = 2w + 2(w - 4) \]
   \[ \text{C} \quad 85 = 2(2w + 4) \]
   \[ \text{D} \quad 85 = w(w + 4) \]

GRIDDED ANSWER

11. In the diagram, \( \overline{WY} \) bisects \( \angle XYZ \). Find \( m \angle XYZ \) in degrees.

12. Angles \( A \) and \( B \) are complements, and the measure of \( \angle A \) is 8 times the measure of \( \angle B \). Find the measure (in degrees) of the supplement of \( \angle A \).

13. The perimeter of the triangle shown is 400 feet. Find its area in square feet.

EXTENDED RESPONSE

14. The athletic director at a college wants to build an indoor playing field. The playing field will be twice as long as it is wide. Artificial turf costs $4 per square foot. The director has $50,000 to spend on artificial turf.
   a. What is the largest area that the director can afford to cover with artificial turf? Explain.
   b. Find the approximate length and width of the field to the nearest foot.

15. An artist uses black ink to draw the outlines of 30 circles and 25 squares, and red ink to fill in the area of each circle and square. The diameter of each circle is 1 inch, and the side length of each square is 1 inch. Which group of drawings uses more black ink, the circles or the squares? Which group of drawings uses more red ink? Explain.

16. Points \( A \) and \( C \) represent the positions of two boats in a large lake. Point \( B \) represents the position of a fixed buoy.
   a. Find the distance from each boat to the buoy.
   b. The boat at point \( A \) travels toward the buoy in a straight line at a rate of 5 kilometers per hour. The boat at point \( C \) travels to the buoy at a rate of 5.2 kilometers per hour. Which boat reaches the buoy first? Explain.
