GEOMETRY

About *Geometry*

In *Geometry*, you will develop reasoning and problem solving skills as you study topics such as congruence and similarity, and apply properties of lines, triangles, quadrilaterals, and circles. You will also develop problem solving skills by using length, perimeter, area, circumference, surface area, and volume to solve real-world problems.

In addition to its geometry content, *Geometry* includes numerous examples and exercises involving algebra, data analysis, and probability. These math topics often appear on standardized tests, so maintaining your familiarity with them is important. To help you prepare for standardized tests, *Geometry* provides instruction and practice on standardized test questions in a variety of formats—multiple choice, short response, extended response, and so on. Technology support for both learning geometry and preparing for standardized tests is available at classzone.com.

About the Authors

Ron Larson is a professor of mathematics at Penn State University at Erie, where he has taught since receiving his Ph.D. in mathematics from the University of Colorado. Dr. Larson is well known as the author of a comprehensive program for mathematics that spans middle school, high school, and college courses. Dr. Larson's numerous professional activities keep him in constant touch with the needs of teachers and supervisors. He closely follows developments in mathematics standards and assessment.

Laurie Boswell is a mathematics teacher at The Riverside School in Lyndonville, Vermont, and has taught mathematics at all levels, elementary through college. A recipient of the Presidential Award for Excellence in Mathematics Teaching, she was also a Tandy Technology Scholar. She served on the NCTM Board of Directors (2002–2005), and she speaks frequently at regional and national conferences on topics related to instructional strategies and course content.

Timothy D. Kanold is the superintendent of Adlai E. Stevenson High School District 125 in Lincolnshire, Illinois. Dr. Kanold served as a teacher and director of mathematics for 17 years prior to becoming superintendent. He is the recipient of the Presidential Award for Excellence in Mathematics and Science Teaching, and a past president of the Council for Presidential Awardees in Mathematics. Dr. Kanold is a frequent speaker at national and international mathematics meetings.

Lee Stiff is a professor of mathematics education in the College of Education and Psychology of North Carolina State University at Raleigh and has taught mathematics at the high school and middle school levels. He served on the NCTM Board of Directors and was elected President of NCTM for the years 2000–2002. He is a recipient of the W. W. Rankin Award for Excellence in Mathematics Education presented by the North Carolina Council of Teachers of Mathematics.

CHAPTER

1

Unit 1
Points, Lines, and Planes

Segment Addition Postulate, p. 14
$AC = AB + BC$

Essentials of Geometry

Prerequisite Skills xxii

1.1 Identify Points, Lines, and Planes 2

1.2 Use Segments and Congruence 9

1.3 Use Midpoint and Distance Formulas 15
Mixed Review of Problem Solving 23

1.4 Measure and Classify Angles 24
Investigating Geometry Construction: Copy and Bisect Segments and Angles 33

1.5 Describe Angle Pair Relationships 35

1.6 Classify Polygons 42

1.7 Find Perimeter, Circumference, and Area 49
Investigating Geometry Activity: Investigate Perimeter and Area 48
Problem Solving Workshop 57
Mixed Review of Problem Solving 58

ASSESSMENT

Quizzes 22, 41, 56
Chapter Summary and Review 59
Chapter Test 64
Algebra Review: Solve Linear Equations and Word Problems 65
★ Standardized Test Preparation and Practice 66

Animated Geometry classzone.com Activities 1, 3, 14, 21, 25, 43, 52

Chapter 1 Highlights

PROBLEM SOLVING

- **Mixed Review of Problem Solving,** 23, 58
- **Multiple Representations,** 41, 55, 57
- **Multi-Step Problems,** 8, 14, 23, 46, 54, 55, 58
- **Using Alternative Methods,** 57
- **Real-World Problem Solving Examples,** 10, 15, 27, 36, 44, 51, 65

★ ASSESSMENT

- **Standardized Test Practice Examples,** 18, 50
- **Multiple Choice,** 6, 13, 20, 29, 39, 44, 46, 53
- **Short Response/Extended Response,** 7, 12, 14, 20, 22, 23, 30, 32, 40, 47, 54, 55, 58, 66
- **Writing/Open-Ended,** 5, 12, 19, 23, 28, 38, 44, 52, 58

TECHNOLOGY

At classzone.com:

- **Animated Geometry,** 1, 3, 14, 21, 25, 43, 52
- **@Home Tutor,** xxii, 7, 13, 21, 31, 40, 46, 48, 54, 60
- **Online Quiz,** 8, 14, 22, 32, 41, 47, 56
- **Animated Algebra (Algebra Review),** 65
- **State Test Practice,** 23, 58, 69

CHAPTER

2

Unit 1
Points, Lines, and Planes

Properties of Congruence, p. 115
$\overline{AB} \cong \overline{CD}$

Reasoning and Proof

Prerequisite Skills 70

2.1 Use Inductive Reasoning 72

2.2 Analyze Conditional Statements 79

2.3 Apply Deductive Reasoning 87
Investigating Geometry Activity: Logic Puzzles 86

2.4 Use Postulates and Diagrams 96
Mixed Review of Problem Solving 103

2.5 Reason Using Properties from Algebra 105
Investigating Geometry Activity: Justify a Number Trick 104

2.6 Prove Statements about Segments and Angles 112
Problem Solving Workshop 120

2.7 Prove Angle Pair Relationships 124
Investigating Geometry Activity: Angles and Intersecting Lines 122
Mixed Review of Problem Solving 132

ASSESSMENT

Quizzes 93, 111, 131
Chapter Summary and Review 133
Chapter Test 138
Algebra Review: Simplify Rational and Radical Expressions 139
★ Standardized Test Preparation and Practice 140

Animated Geometry classzone.com Activities 71, 72, 81, 88, 97, 106, 119, 125

Chapter 2 Highlights

PROBLEM SOLVING

- **Mixed Review of Problem Solving,** 103, 132
- **Multiple Representations,** 77, 111, 120
- **Multi-Step Problems,** 85, 102, 103, 110, 119, 130, 132
- **Using Alternative Methods,** 120
- **Real-World Problem Solving Examples,** 74, 89, 106, 115

★ ASSESSMENT

- **Standardized Test Practice Examples,** 74, 127
- **Multiple Choice,** 75, 76, 83, 90, 99, 100, 109, 116, 128
- **Short Response/Extended Response,** 76, 78, 84, 92, 101, 102, 103, 110, 117, 119, 128, 130, 132, 140
- **Writing/Open-Ended,** 75, 82, 84, 90, 99, 100, 108, 109, 116, 127, 129, 132

TECHNOLOGY

CHAPTER

3

Unit 1
Points, Lines, and Planes

Applying Slope, p. 174

Slope = $\frac{41}{80}$

Parallel and Perpendicular Lines

Prerequisite Skills 144

3.1 Identify Pairs of Lines and Angles 147
Investigating Geometry Activity: Draw and Interpret Lines 146

3.2 Use Parallel Lines and Transversals 154
Investigating Geometry Activity: Parallel Lines and Angles 153

3.3 Prove Lines are Parallel 161
Mixed Review of Problem Solving 170

3.4 Find and Use Slopes of Lines 171
Technology Activity Investigate Slopes 179

3.5 Write and Graph Equations of Lines 180
Problem Solving Workshop 188

3.6 Prove Theorems about Perpendicular Lines 190
Mixed Review of Problem Solving 200

ASSESSMENT

Quizzes 160, 178, 197
Chapter Summary and Review 201
Chapter Test 206
Algebra Review: Graph and Solve Linear Inequalities 207
★ Standardized Test Preparation and Practice 208
Cumulative Review, Chapters 1–3 212

Animated Geometry classzone.com Activities 145, 148, 155, 163, 174, 181

Chapter 3 Highlights

PROBLEM SOLVING

- **Mixed Review of Problem Solving,** 170, 200
- **Multiple Representations,** 174, 177, 188
- **Multi-Step Problems,** 166, 168, 170, 177, 186, 200
- **Using Alternative Methods,** 188
- **Real-World Problem Solving Examples,** 148, 156, 162, 164, 174, 182, 183, 193, 207

★ ASSESSMENT

- **Standardized Test Practice Example,** 173
- **Multiple Choice,** 151, 157, 158, 166, 176, 184, 185, 195, 208
- **Short Response/Extended Response,** 152, 158, 159, 166, 168, 169, 170, 176, 178, 187, 194, 196, 200
- **Writing/Open-Ended,** 150, 151, 157, 165, 170, 175, 184, 195, 200

CHAPTER

4

Unit 2
Triangles

Indirect Measurement, p. 257
$\triangle MLK \cong \triangle MPN$

Congruent Triangles

Prerequisite Skills 214

4.1 Apply Triangle Sum Properties 217
Investigating Geometry Activity: Angle Sums in Triangles 216

4.2 Apply Congruence and Triangles 225
Problem Solving Workshop 232

4.3 Prove Triangles Congruent by SSS 234
Investigating Geometry Activity: Investigate Congruent Figures 233

4.4 Prove Triangles Congruent by SAS and HL 240
Technology Activity Investigate Triangles and Congruence 247
Mixed Review of Problem Solving 248

4.5 Prove Triangles Congruent by ASA and AAS 249

4.6 Use Congruent Triangles 256

4.7 Use Isosceles and Equilateral Triangles 264

4.8 Perform Congruence Transformations 272
Investigating Geometry Activity: Investigate Slides and Flips 271
Mixed Review of Problem Solving 280

ASSESSMENT

Quizzes 239, 263, 279
Chapter Summary and Review 281
Chapter Test 286
Algebra Review: Solve Inequalities and Absolute Value Equations 287
★ Standardized Test Preparation and Practice 288

CHAPTER

6

Unit 2
Triangles

Applying Similar Triangles, p. 394

$$\frac{66 \text{ in.}}{7 \text{ ft}} = \frac{x \text{ in.}}{102 \text{ ft}}$$

Similarity

Prerequisite Skills 354

6.1 Ratios, Proportions, and the Geometric Mean 356

6.2 Use Proportions to Solve Geometry Problems 364

6.3 Use Similar Polygons 372
- Investigating Geometry Activity: Similar Polygons 371
- Mixed Review of Problem Solving 380

6.4 Prove Triangles Similar by AA 381

6.5 Prove Triangles Similar by SSS and SAS 388

6.6 Use Proportionality Theorems 397
- Investigating Geometry Activity: Investigate Proportionality 396
- Problem Solving Workshop 404

6.7 Perform Similarity Transformations 409
- Investigating Geometry Activity: Dilations 408
- Mixed Review of Problem Solving 416

CHAPTER

8

Unit 3
Figures in the Plane

Polygon Angle Sum, p. 512
$(n - 2) \cdot 180°$

Quadrilaterals

Prerequisite Skills 504

8.1 Find Angle Measures in Polygons 507
Investigating Geometry Activity: Investigate Angle Sums in Polygons 506

8.2 Use Properties of Parallelograms 515
Investigating Geometry Activity: Investigate Parallelograms 514

8.3 Show that a Quadrilateral is a Parallelogram 522
Problem Solving Workshop 530
Mixed Review of Problem Solving 532

8.4 Properties of Rhombuses, Rectangles, and Squares 533

8.5 Use Properties of Trapezoids and Kites 542
Investigating Geometry Activity: Midsegment of a Trapezoid 541

8.6 Identify Special Quadrilaterals 552
Mixed Review of Problem Solving 558

ASSESSMENT

Quizzes 521, 540, 557
Chapter Summary and Review 559
Chapter Test 564
Algebra Review: Graph Nonlinear Functions 565
★ Standardized Test Preparation and Practice 566

CHAPTER

9

Unit 3
Figures in the Plane

Identifying Transformations, p. 595
$(a, b) \rightarrow (a, -b)$

Properties of Transformations

Prerequisite Skills 570

9.1 Translate Figures and Use Vectors 572

9.2 Use Properties of Matrices 580

9.3 Perform Reflections 589
Investigating Geometry Activity: Reflections in the Plane 588
Mixed Review of Problem Solving 597

9.4 Perform Rotations 598
Problem Solving Workshop 606

9.5 Apply Compositions of Transformations 608
Investigating Geometry Activity: Double Reflections 607

9.6 Identify Symmetry 619

9.7 Identify and Perform Dilations 626
Investigating Geometry Activity: Investigate Dilations 625
Technology Activity Compositions with Dilations 633
Mixed Review of Problem Solving 634

ASSESSMENT

Quizzes 587, 615, 632
Chapter Summary and Review 635
Chapter Test 640
Algebra Review: Multiply Binomials and Use Quadratic Formula 641
★ Standardized Test Preparation and Practice 642
Cumulative Review, Chapters 1–9 646

Using Your Textbook

Your textbook contains many resources that you can use for reference when you are studying or doing your homework.

IN EVERY CHAPTER

BIG IDEAS The second page of every chapter includes a list of important ideas developed in the chapter. More information about these ideas appears in the Chapter Summary page at the end of the chapter.

POSTULATES AND THEOREMS The Postulate and Theorem notebook displays present geometric properties you will use in reasoning about figures. You may want to copy these statements into your notes.

KEY CONCEPTS The Key Concept notebook displays present main ideas of the lesson. You may want to copy these ideas into your notes.

VOCABULARY New words and review words are listed in a column on the first page of every lesson. Vocabulary terms appear highlighted and in bold print within the lesson. A list of vocabulary appears in the Chapter Review at the end of each chapter.

MIXED REVIEW Every lesson ends with Mixed Review exercises. These exercises help you review earlier lessons and include exercises to prepare you for the next lesson. Page references with the exercises point you to the lessons being reviewed.

STUDENT RESOURCES AT THE BACK OF THE BOOK

SKILLS REVIEW HANDBOOK Use the Skills Review Handbook topics on pages 869–895 to review material learned in previous courses.

EXTRA PRACTICE Use the Extra Practice on pages 896–919 for more exercises or to review a chapter before a test.

TABLES Refer to the tables on pages 920–925 for information about mathematical symbols, measures, formulas, squares, and trigonometric ratios.

POSTULATES AND THEOREMS Refer to pages 926–931 for a complete list of all postulates and theorems presented in the book.

ADDITIONAL PROOFS Refer to pages 932–938 for longer proofs of some of the theorems presented in the book.

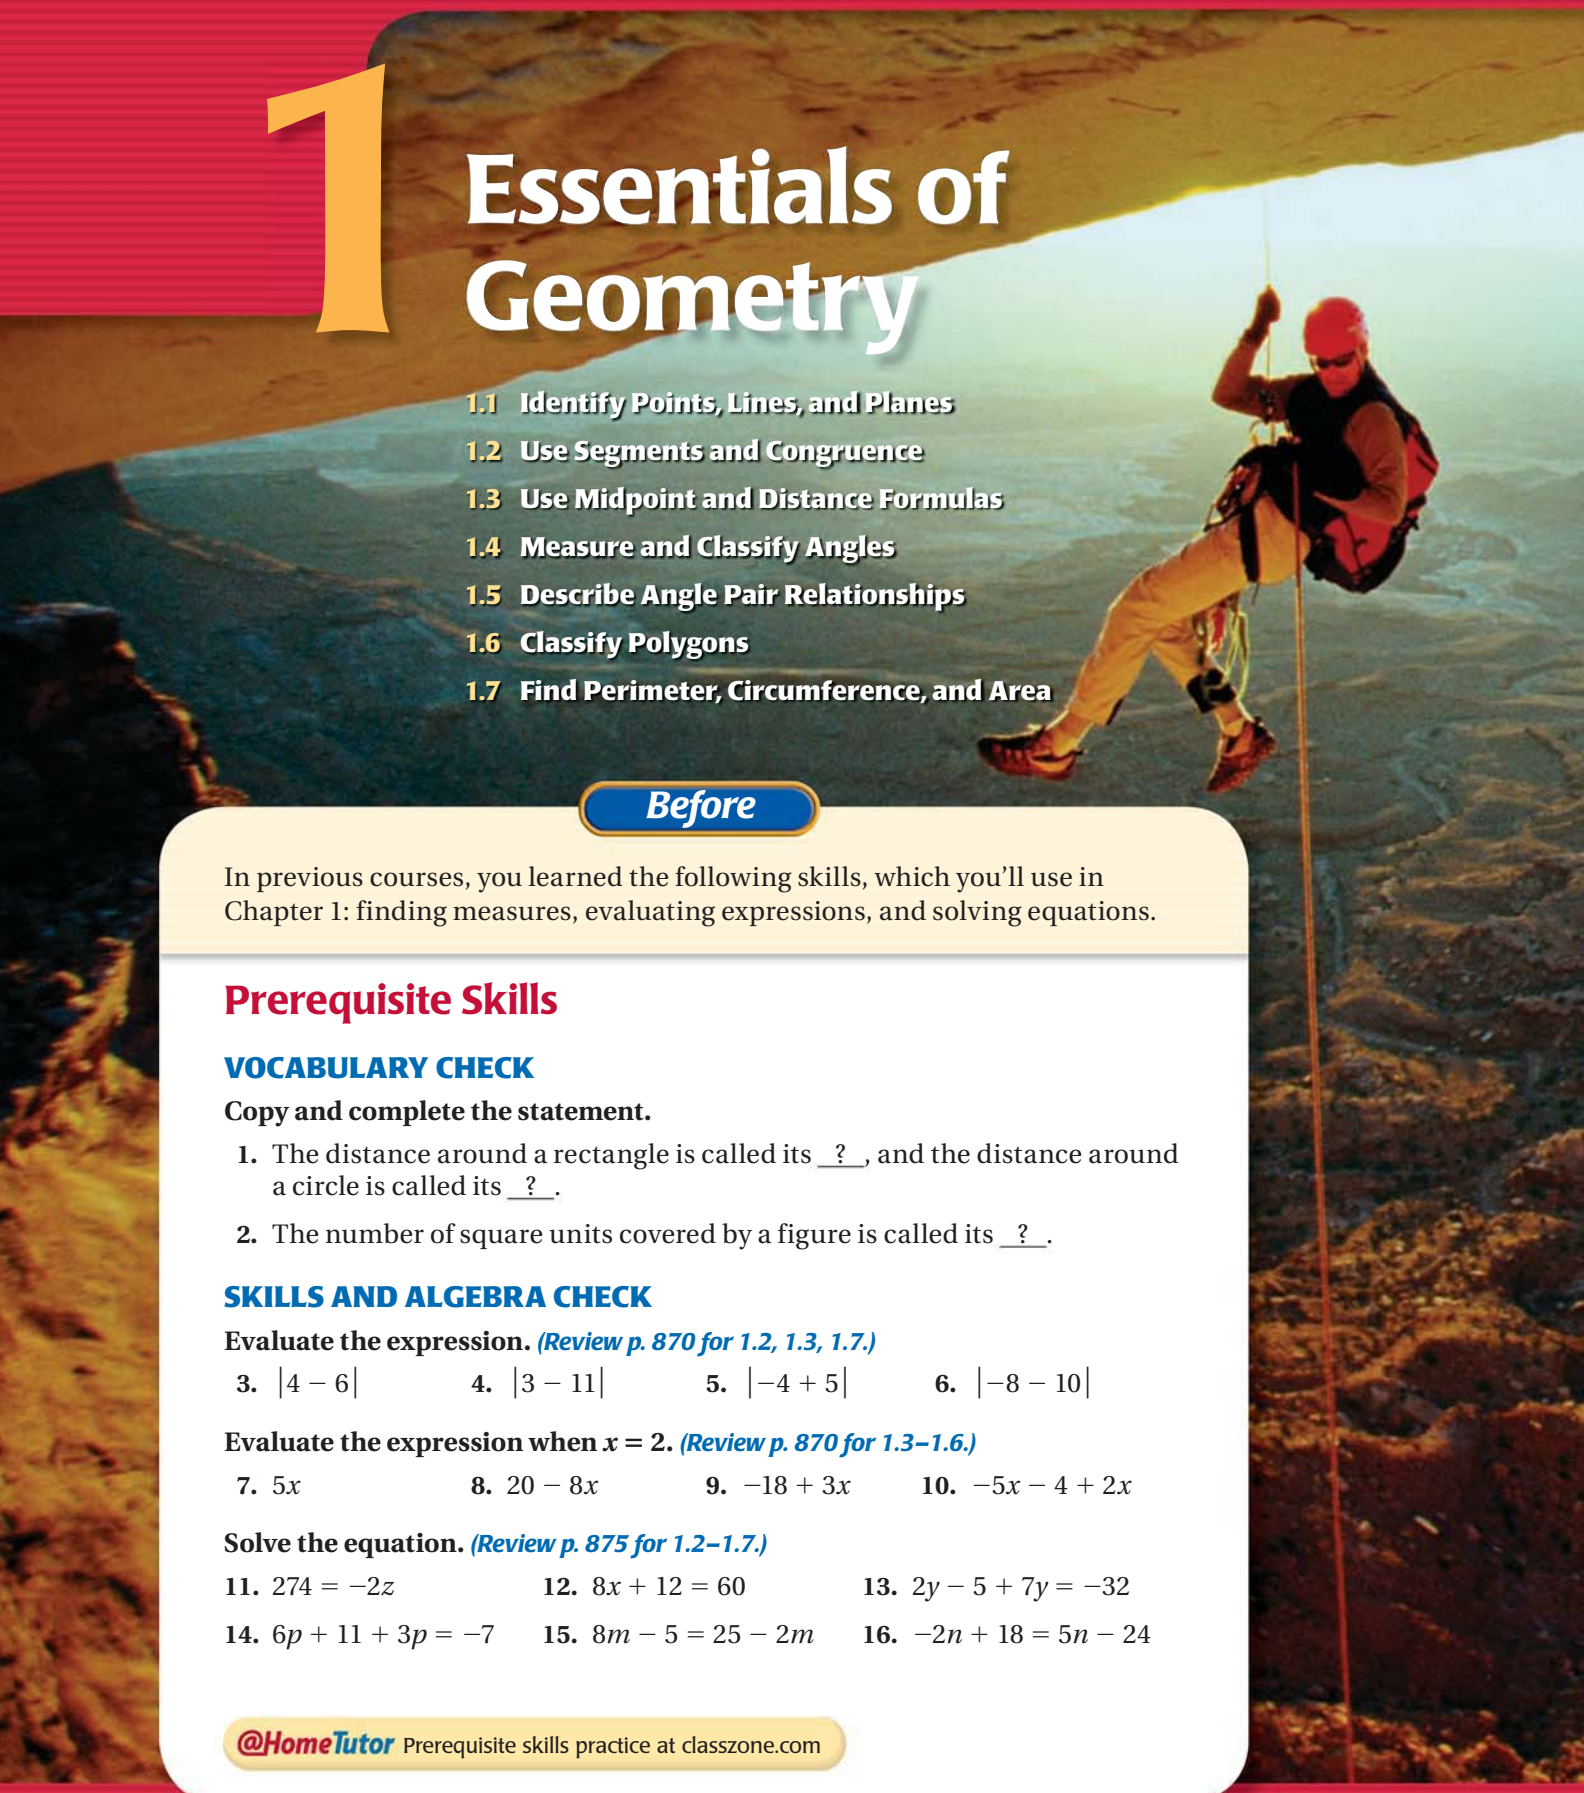
GLOSSARY Use the English-Spanish Glossary on pages 939–980 to see definitions in English and Spanish, as well as examples illustrating vocabulary.

INDEX Look up items in the alphabetical Index on pages 981–1000 to find where a particular math topic is covered in the book.

WORKED-OUT SOLUTIONS In each lesson, exercises identified by a red circle have complete worked-out solutions starting on page WS1. These provide a model for what a full solution should include.

SELECTED ANSWERS Use the Selected Answers starting on page SA1 to check your work.

1 Essentials of Geometry



1.1 Identify Points, Lines, and Planes
1.2 Use Segments and Congruence
1.3 Use Midpoint and Distance Formulas
1.4 Measure and Classify Angles
1.5 Describe Angle Pair Relationships
1.6 Classify Polygons
1.7 Find Perimeter, Circumference, and Area

Before

In previous courses, you learned the following skills, which you'll use in Chapter 1: finding measures, evaluating expressions, and solving equations.

Prerequisite Skills

VOCABULARY CHECK

Copy and complete the statement.

1. The distance around a rectangle is called its ___?___, and the distance around a circle is called its ___?___.
2. The number of square units covered by a figure is called its ___?___.

SKILLS AND ALGEBRA CHECK

Evaluate the expression. *(Review p. 870 for 1.2, 1.3, 1.7.)*

3. $|4 - 6|$ **4.** $|3 - 11|$ **5.** $|-4 + 5|$ **6.** $|-8 - 10|$

Evaluate the expression when $x = 2$. *(Review p. 870 for 1.3–1.6.)*

7. $5x$ **8.** $20 - 8x$ **9.** $-18 + 3x$ **10.** $-5x - 4 + 2x$

Solve the equation. *(Review p. 875 for 1.2–1.7.)*

11. $274 = -2z$ **12.** $8x + 12 = 60$ **13.** $2y - 5 + 7y = -32$

14. $6p + 11 + 3p = -7$ **15.** $8m - 5 = 25 - 2m$ **16.** $-2n + 18 = 5n - 24$

@HomeTutor Prerequisite skills practice at classzone.com

Now

In Chapter 1, you will apply the big ideas listed below and reviewed in the Chapter Summary on page 59. You will also use the key vocabulary listed below.

Big Ideas

1. **Describing geometric figures**
2. **Measuring geometric figures**
3. **Understanding equality and congruence**

KEY VOCABULARY

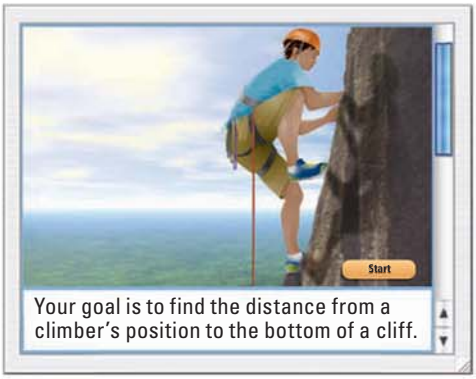
- undefined terms, *p. 2*
  point, line, plane
- defined terms, *p. 3*
- line segment, endpoints, *p. 3*
- ray, opposite rays, *p. 3*
- postulate, axiom, *p. 9*
- congruent segments, *p. 11*
- midpoint, *p. 15*
- segment bisector, *p. 15*
- acute, right, obtuse, straight angles, *p. 25*
- congruent angles, *p. 26*
- angle bisector, *p. 28*
- linear pair, *p. 37*
- vertical angles, *p. 37*
- polygon, *p. 42*
- convex, concave, *p. 42*
- *n*-gon, *p. 43*
- equilateral, equiangular, regular, *p. 43*

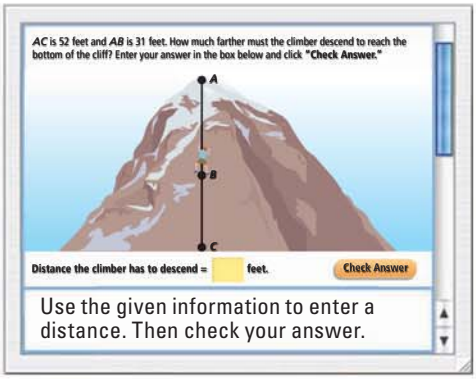
Why?

Geometric figures can be used to represent real-world situations. For example, you can show a climber's position along a stretched rope by a point on a line segment.

Animated Geometry

The animation illustrated below for Exercise 35 on page 14 helps you answer this question: How far must a climber descend to reach the bottom of a cliff?





Animated Geometry at classzone.com

Other animations for Chapter 1: pages 3, 21, 25, 43, and 52

1.1 Identify Points, Lines, and Planes

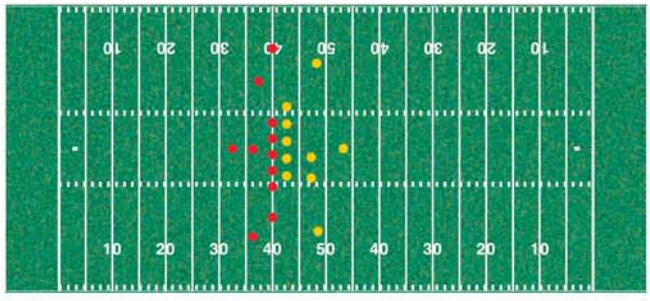
Before You studied basic concepts of geometry.

Now You will name and sketch geometric figures.

Why So you can use geometry terms in the real world, as in Ex. 13.

Key Vocabulary
- **undefined terms** point, line, plane
- **collinear points**
- **coplanar points**
- **defined terms**
- **line segment**
- **endpoints**
- **ray**
- **opposite rays**
- **intersection**

In the diagram of a football field, the positions of players are represented by *points*. The yard lines suggest *lines*, and the flat surface of the playing field can be thought of as a *plane*.



In geometry, the words *point*, *line*, and *plane* are **undefined terms**. These words do not have formal definitions, but there is agreement about what they mean.

TAKE NOTES
When you write new concepts and yellow-highlighted vocabulary in your notebook, be sure to copy all associated diagrams.

KEY CONCEPT *For Your Notebook*

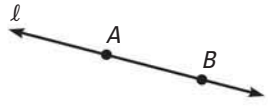
Undefined Terms

Point A **point** has no dimension. It is represented by a dot.

point *A*

Line A **line** has one dimension. It is represented by a line with two arrowheads, but it extends without end.

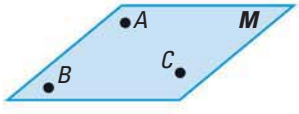
Through any two points, there is exactly one line. You can use any two points on a line to name it.



line ℓ, line AB ($\overleftrightarrow{AB}$), or line BA ($\overleftrightarrow{BA}$)

Plane A **plane** has two dimensions. It is represented by a shape that looks like a floor or a wall, but it extends without end.

Through any three points not on the same line, there is exactly one plane. You can use three points that are not all on the same line to name a plane.



plane *M* or plane *ABC*

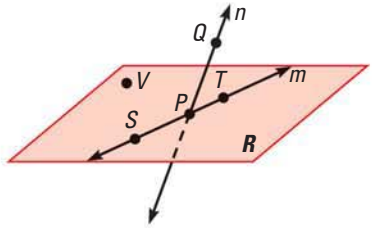
Collinear points are points that lie on the same line. **Coplanar points** are points that lie in the same plane.

EXAMPLE 1 Name points, lines, and planes

VISUAL REASONING
There is a line through points S and Q that is not shown in the diagram. Try to imagine what plane SPQ would look like if it were shown.

a. Give two other names for $\overleftrightarrow{PQ}$ and for plane R.

b. Name three points that are collinear. Name four points that are coplanar.



Solution

a. Other names for $\overleftrightarrow{PQ}$ are $\overleftrightarrow{QP}$ and line n. Other names for plane R are plane SVT and plane PTV.

b. Points S, P, and T lie on the same line, so they are collinear. Points S, P, T, and V lie in the same plane, so they are coplanar.

Animated Geometry at classzone.com

GUIDED PRACTICE for Example 1

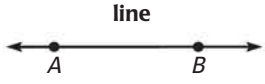
1. Use the diagram in Example 1. Give two other names for $\overleftrightarrow{ST}$. Name a point that is *not* coplanar with points Q, S, and T.

DEFINED TERMS In geometry, terms that can be described using known words such as *point* or *line* are called **defined terms**.

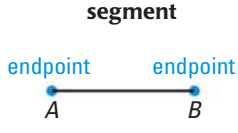
KEY CONCEPT *For Your Notebook*

Defined Terms: Segments and Rays

Line AB (written as $\overleftrightarrow{AB}$) and points A and B are used here to define the terms below.

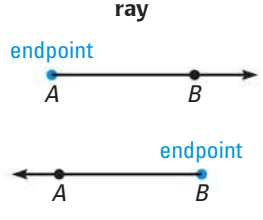


Segment The **line segment** AB, or **segment** AB, (written as $\overline{AB}$) consists of the **endpoints** A and B and all points on $\overleftrightarrow{AB}$ that are between A and B. Note that $\overline{AB}$ can also be named $\overline{BA}$.



Ray The **ray** AB (written as $\overrightarrow{AB}$) consists of the endpoint A and all points on $\overleftrightarrow{AB}$ that lie on the same side of A as B.

Note that $\overrightarrow{AB}$ and $\overrightarrow{BA}$ are different rays.



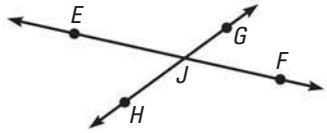
If point C lies on $\overleftrightarrow{AB}$ between A and B, then $\overrightarrow{CA}$ and $\overrightarrow{CB}$ are **opposite rays**.

Segments and rays are collinear if they lie on the same line. So, opposite rays are collinear. Lines, segments, and rays are coplanar if they lie in the same plane.

EXAMPLE 2 Name segments, rays, and opposite rays

a. Give another name for $\overline{GH}$.

b. Name all rays with endpoint J. Which of these rays are opposite rays?



AVOID ERRORS

In Example 2, $\overrightarrow{JG}$ and $\overrightarrow{JF}$ have a common endpoint, but are not collinear. So they are *not* opposite rays.

Solution

a. Another name for $\overline{GH}$ is $\overline{HG}$.

b. The rays with endpoint J are $\overrightarrow{JE}$, $\overrightarrow{JG}$, $\overrightarrow{JF}$, and $\overrightarrow{JH}$. The pairs of opposite rays with endpoint J are $\overrightarrow{JE}$ and $\overrightarrow{JF}$, and $\overrightarrow{JG}$ and $\overrightarrow{JH}$.

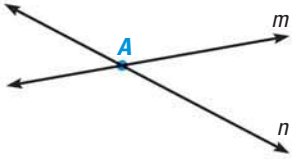
GUIDED PRACTICE for Example 2

Use the diagram in Example 2.

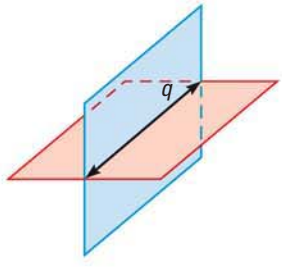
2. Give another name for $\overline{EF}$.

3. Are $\overrightarrow{HJ}$ and $\overrightarrow{JH}$ the same ray? Are $\overrightarrow{HJ}$ and $\overrightarrow{HG}$ the same ray? *Explain*.

INTERSECTIONS Two or more geometric figures *intersect* if they have one or more points in common. The **intersection** of the figures is the set of points the figures have in common. Some examples of intersections are shown below.



The intersection of two different lines is a point.



The intersection of two different planes is a line.

EXAMPLE 3 Sketch intersections of lines and planes

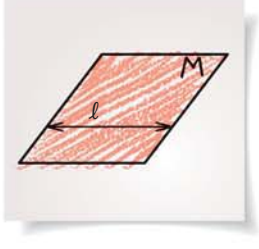
a. Sketch a plane and a line that is in the plane.

b. Sketch a plane and a line that does not intersect the plane.

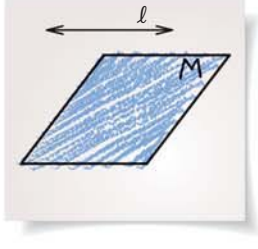
c. Sketch a plane and a line that intersects the plane at a point.

Solution

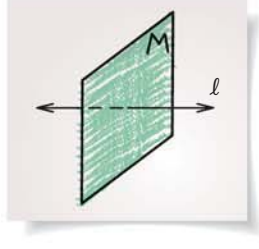
a.



b.

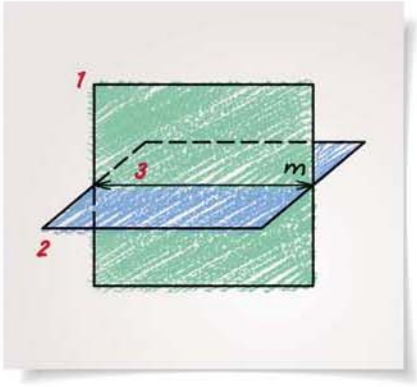


c.



EXAMPLE 4 Sketch intersections of planes

Sketch two planes that intersect in a line.



Solution

STEP 1 **Draw** a vertical plane. Shade the plane.

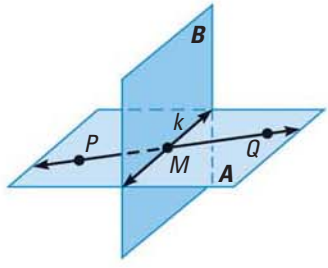
STEP 2 **Draw** a second plane that is horizontal. Shade this plane a different color. Use dashed lines to show where one plane is hidden.

STEP 3 **Draw** the line of intersection.

✓ GUIDED PRACTICE for Examples 3 and 4

4. Sketch two different lines that intersect a plane at the same point.

Use the diagram at the right.



5. Name the intersection of $\overleftrightarrow{PQ}$ and line k.

6. Name the intersection of plane A and plane B.

7. Name the intersection of line k and plane A.

1.1 EXERCISES

HOMEWORK KEY

- ○ ⊱ **WORKED-OUT SOLUTIONS** on p. WS1 for Exs. 15, 19, and 43
- ★ ⊱ **STANDARDIZED TEST PRACTICE** Exs. 2, 7, 13, 16, and 43

SKILL PRACTICE

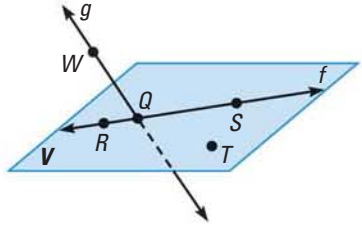
1. VOCABULARY Write in words what each of the following symbols means.

a. Q **b.** $\overline{MN}$ **c.** $\overrightarrow{ST}$ **d.** $\overleftrightarrow{FG}$

2. ★ WRITING *Compare* collinear points and coplanar points. Are collinear points also coplanar? Are coplanar points also collinear? *Explain*.

EXAMPLE 1 on p. 3 for Exs. 3–7

NAMING POINTS, LINES, AND PLANES **In Exercises 3–7, use the diagram.**



3. Give two other names for $\overleftrightarrow{WQ}$.

4. Give another name for plane V.

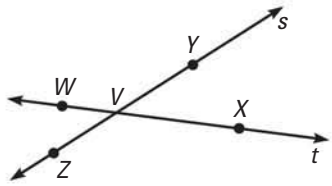
5. Name three points that are collinear. Then name a fourth point that is *not* collinear with these three points.

6. Name a point that is *not* coplanar with R, S, and T.

7. ★ WRITING Is point W coplanar with points Q and R? *Explain*.

EXAMPLE 2
on p. 4
for Exs. 8–13

NAMING SEGMENTS AND RAYS **In Exercises 8–12, use the diagram.**



8. What is another name for $\overline{ZY}$?

9. Name all rays with endpoint V.

10. Name two pairs of opposite rays.

11. Give another name for $\overrightarrow{WV}$.

12. **ERROR ANALYSIS** A student says that $\overrightarrow{VW}$ and $\overrightarrow{VZ}$ are opposite rays because they have the same endpoint. *Describe* the error.

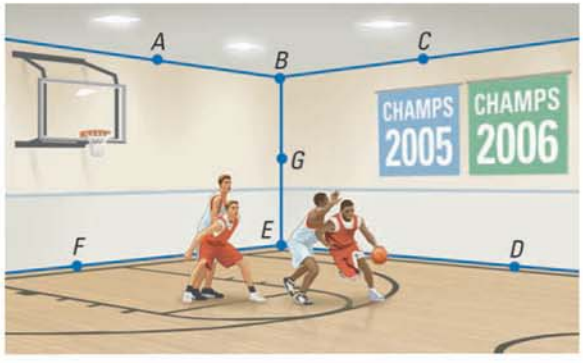
13. ★ **MULTIPLE CHOICE** Which statement about the diagram at the right is true?

Ⓐ A, B, and C are collinear.

Ⓑ C, D, E, and G are coplanar.

Ⓒ B lies on $\overrightarrow{GE}$.

Ⓓ $\overrightarrow{EF}$ and $\overrightarrow{ED}$ are opposite rays.



EXAMPLES 3 and 4
on pp. 4–5
for Exs. 14–23

SKETCHING INTERSECTIONS **Sketch the figure described.**

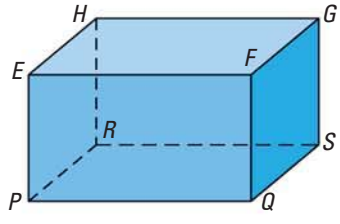
14. Three lines that lie in a plane and intersect at one point

15. One line that lies in a plane, and one line that does not lie in the plane

16. ★ **MULTIPLE CHOICE** Line AB and line CD intersect at point E. Which of the following are opposite rays?

Ⓐ $\overrightarrow{EC}$ and $\overrightarrow{ED}$ Ⓑ $\overrightarrow{CE}$ and $\overrightarrow{DE}$ Ⓒ $\overrightarrow{AB}$ and $\overrightarrow{BA}$ Ⓓ $\overrightarrow{AE}$ and $\overrightarrow{BE}$

READING DIAGRAMS **In Exercises 17–22, use the diagram at the right.**



17. Name the intersection of $\overleftrightarrow{PR}$ and $\overleftrightarrow{HR}$.

18. Name the intersection of plane EFG and plane FGS.

19. Name the intersection of plane PQS and plane HGS.

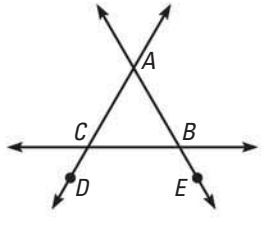
20. Are points P, Q, and F collinear? Are they coplanar?

21. Are points P and G collinear? Are they coplanar?

22. Name three planes that intersect at point E.

23. **SKETCHING PLANES** Sketch plane J intersecting plane K. Then draw a line ℓ on plane J that intersects plane K at a single point.

24. **NAMING RAYS** Name 10 different rays in the diagram at the right. Then name 2 pairs of opposite rays.



25. **SKETCHING** Draw three noncollinear points J, K, and L. Sketch $\overline{JK}$ and add a point M on $\overline{JK}$. Then sketch $\overrightarrow{ML}$.

26. **SKETCHING** Draw two points P and Q. Then sketch $\overrightarrow{PQ}$. Add a point R on the ray so that Q is between P and R.

REVIEW ALGEBRA
For help with equations of lines, see p. 878.

ALGEBRA **In Exercises 27–32, you are given an equation of a line and a point. Use substitution to determine whether the point is on the line.**

27. $y = x - 4$; $A(5, 1)$ **28.** $y = x + 1$; $A(1, 0)$ **29.** $y = 3x + 4$; $A(7, 1)$

30. $y = 4x + 2$; $A(1, 6)$ **31.** $y = 3x - 2$; $A(-1, -5)$ **32.** $y = -2x + 8$; $A(-4, 0)$

GRAPHING **Graph the inequality on a number line. Tell whether the graph is a *segment*, a *ray* or *rays*, a *point*, or a *line*.**

33. $x \leq 3$ **34.** $x \geq -4$ **35.** $-7 \leq x \leq 4$

36. $x \geq 5$ or $x \leq -2$ **37.** $x \geq -1$ or $x \leq 5$ **38.** $|x| \leq 0$

39. CHALLENGE Tell whether each of the following situations involving three planes is possible. If a situation is possible, make a sketch.

a. None of the three planes intersect.

b. The three planes intersect in one line.

c. The three planes intersect in one point.

d. Two planes do not intersect. The third plane intersects the other two.

e. Exactly two planes intersect. The third plane does not intersect the other two.

PROBLEM SOLVING

EXAMPLE 3
on p. 4
for Exs. 40–42

EVERYDAY INTERSECTIONS **What kind of geometric intersection does the photograph suggest?**

40.

41.

42.

43. ★ **SHORT RESPONSE** *Explain* why a four-legged table may rock from side to side even if the floor is level. Would a three-legged table on the same level floor rock from side to side? Why or why not?

@HomeTutor for problem solving help at classzone.com

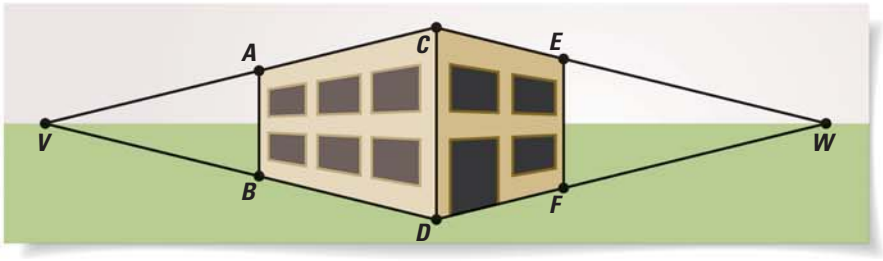
44. SURVEYING A surveying instrument is placed on a tripod. The tripod has three legs whose lengths can be adjusted.

a. When the tripod is sitting on a level surface, are the tips of the legs coplanar?

b. Suppose the tripod is used on a sloping surface. The length of each leg is adjusted so that the base of the surveying instrument is level with the horizon. Are the tips of the legs coplanar? *Explain*.

@HomeTutor for problem solving help at classzone.com

45. MULTI-STEP PROBLEM In a *perspective drawing*, lines that do not intersect in real life are represented by lines that appear to intersect at a point far away on the horizon. This point is called a *vanishing point*. The diagram shows a drawing of a house with two vanishing points.



a. Trace the black line segments in the drawing. Using lightly dashed lines, join points A and B to the vanishing point W. Join points E and F to the vanishing point V.

b. Label the intersection of $\overleftrightarrow{EV}$ and $\overleftrightarrow{AW}$ as G. Label the intersection of $\overleftrightarrow{FV}$ and $\overleftrightarrow{BW}$ as H.

c. Using heavy dashed lines, draw the hidden edges of the house: $\overline{AG}$, $\overline{EG}$, $\overline{BH}$, $\overline{FH}$, and $\overline{GH}$.

46. CHALLENGE Each street in a particular town intersects every existing street exactly one time. Only two streets pass through each intersection.

2 streets

3 streets

4 streets

a. A traffic light is needed at each intersection. How many traffic lights are needed if there are 5 streets in the town? 6 streets?

b. *Describe* a pattern you can use to find the number of additional traffic lights that are needed each time a street is added to the town.

MIXED REVIEW

Find the difference. *(p. 869)*

47. $-15 - 9$ **48.** $6 - 10$ **49.** $-25 - (-12)$

PREVIEW
Prepare for Lesson 1.2 in Exs. 53–58.

Evaluate the expression. *(p. 870)*

53. $5 \cdot |-2 + 1|$ **54.** $|-8 + 7| - 6$ **55.** $-7 \cdot |8 - 10|$

Plot the point in a coordinate plane. *(p. 878)*

56. $A(2, 4)$ **57.** $B(-3, 6)$ **58.** $E(6, 7.5)$

1.2 Use Segments and Congruence

Before You learned about points, lines, and planes.

Now You will use segment postulates to identify congruent **segments**.

Why? So you can calculate flight distances, as in Ex. 33.

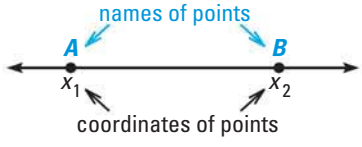
Key Vocabulary
- **postulate, axiom**
- **coordinate**
- **distance**
- **between**
- **congruent segments**

In Geometry, a rule that is accepted without proof is called a **postulate** or **axiom**. A rule that can be proved is called a *theorem*, as you will see later. Postulate 1 shows how to find the distance between two points on a line.

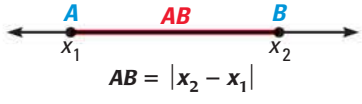
POSTULATE *For Your Notebook*

POSTULATE 1 Ruler Postulate

The points on a line can be matched one to one with the real numbers. The real number that corresponds to a point is the **coordinate** of the point.



The **distance** between points A and B, written as AB, is the absolute value of the difference of the coordinates of A and B.



In the diagrams above, the small numbers in the coordinates x_1 and x_2 are called *subscripts*. The coordinates are read as "x sub one" and "x sub two."

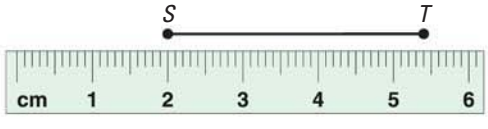
The distance between points A and B, or AB, is also called the *length* of $\overline{AB}$.

EXAMPLE 1 Apply the Ruler Postulate

Measure the length of $\overline{ST}$ to the nearest tenth of a centimeter.

Solution

Align one mark of a metric ruler with S. Then estimate the coordinate of T. For example, if you align S with 2, T appears to align with 5.4.

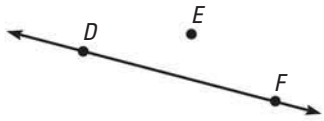


$ST = |5.4 - 2| = 3.4$ **Use Ruler Postulate.**

▶ The length of $\overline{ST}$ is about 3.4 centimeters.

ADDING SEGMENT LENGTHS When three points are collinear, you can say that one point is **between** the other two.

Point *B* is between points *A* and *C*.



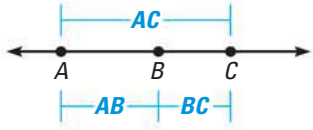
Point *E* is not between points *D* and *F*.

POSTULATE *For Your Notebook*

POSTULATE 2 Segment Addition Postulate

If B is between A and C, then $AB + BC = AC$.

If $AB + BC = AC$, then B is between A and C.



EXAMPLE 2 Apply the Segment Addition Postulate

MAPS The cities shown on the map lie approximately in a straight line. Use the given distances to find the distance from Lubbock, Texas, to St. Louis, Missouri.

Solution

Because Tulsa, Oklahoma, lies between Lubbock and St. Louis, you can apply the Segment Addition Postulate.

$$LS = LT + TS = 380 + 360 = 740$$

▸ The distance from Lubbock to St. Louis is about 740 miles.

GUIDED PRACTICE for Examples 1 and 2

Use a ruler to measure the length of the segment to the nearest $\frac{1}{8}$ inch.

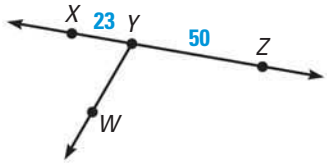
1. 

2. 

In Exercises 3 and 4, use the diagram shown.

3. Use the Segment Addition Postulate to find XZ.

4. In the diagram, $WY = 30$. Can you use the Segment Addition Postulate to find the distance between points W and Z? *Explain* your reasoning.



EXAMPLE 3 Find a length

Use the diagram to find *GH*.

Solution

Use the Segment Addition Postulate to write an equation. Then solve the equation to find *GH*.

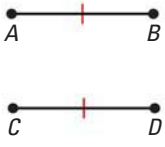
$FH = FG + GH$ **Segment Addition Postulate**

$36 = 21 + GH$ **Substitute 36 for *FH* and 21 for *FG*.**

$15 = GH$ **Subtract 21 from each side.**

CONGRUENT SEGMENTS Line segments that have the same length are called **congruent segments**. In the diagram below, you can say "the length of $\overline{AB}$ is equal to the length of $\overline{CD}$," or you can say "$\overline{AB}$ *is congruent to* $\overline{CD}$." The symbol $\cong$ means "is congruent to."

READ DIAGRAMS
In the diagram, the red tick marks indicate that $\overline{AB} \cong \overline{CD}$.



Lengths are equal. $AB = CD$ "is equal to"

Segments are congruent. $\overline{AB} \cong \overline{CD}$ "is congruent to"

EXAMPLE 4 Compare segments for congruence

Plot *J*(−3, 4), *K*(2, 4), *L*(1, 3), and *M*(1, −2) in a coordinate plane. Then determine whether $\overline{JK}$ and $\overline{LM}$ are congruent.

Solution

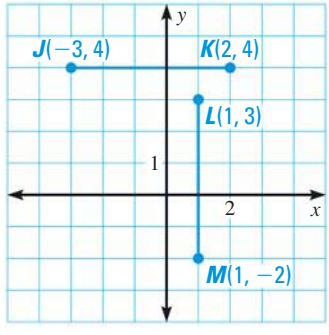
To find the length of a horizontal segment, find the absolute value of the difference of the *x*-coordinates of the endpoints.

$JK = |2 - (-3)| = 5$ **Use Ruler Postulate.**

To find the length of a vertical segment, find the absolute value of the difference of the *y*-coordinates of the endpoints.

$LM = |-2 - 3| = 5$ **Use Ruler Postulate.**

▶ $\overline{JK}$ and $\overline{LM}$ have the same length. So, $\overline{JK} \cong \overline{LM}$.



REVIEW USING A COORDINATE PLANE
For help with using a coordinate plane, see p. 878.

GUIDED PRACTICE for Examples 3 and 4

5. Use the diagram at the right to find *WX*.

6. Plot the points *A*(−2, 4), *B*(3, 4), *C*(0, 2), and *D*(0, −2) in a coordinate plane. Then determine whether $\overline{AB}$ and $\overline{CD}$ are congruent.

1.2 EXERCISES

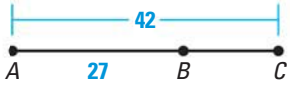
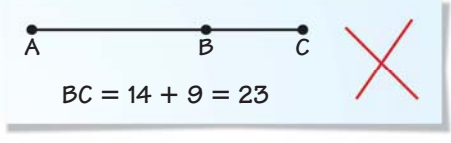
9. Find XY.

10. Find BC.



11. Find DE.

12. **ERROR ANALYSIS** In the figure at the right, $AC = 14$ and $AB = 9$. *Describe* and correct the error made in finding BC.



EXAMPLE 4 on p. 11 for Exs. 13–19

CONGRUENCE **In Exercises 13–15, plot the given points in a coordinate plane. Then determine whether the line segments named are congruent.**

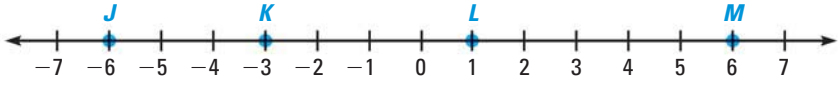
13. $A(0, 1)$, $B(4, 1)$, $C(1, 2)$, $D(1, 6)$; $\overline{AB}$ and $\overline{CD}$

14. $J(-6, -8)$, $K(-6, 2)$, $L(-2, -4)$, $M(-6, -4)$; $\overline{JK}$ and $\overline{LM}$

15. $R(-200, 300)$, $S(200, 300)$, $T(300, -200)$, $U(300, 100)$; $\overline{RS}$ and $\overline{TU}$

ALGEBRA **Use the number line to find the indicated distance.**

16. JK 17. JL 18. JM 19. KM

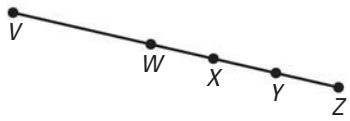


20. ★ **SHORT RESPONSE** Use the diagram. Is it possible to use the Segment Addition Postulate to show that $FB > CB$ or that $AC > DB$? *Explain*.

FINDING LENGTHS **In the diagram, points *V*, *W*, *X*, *Y*, and *Z* are collinear, *VZ* = 52, *XZ* = 20, and *WX* = *XY* = *YZ*. Find the indicated length.**

21. *WX**22.** *VW**23.** *WY*

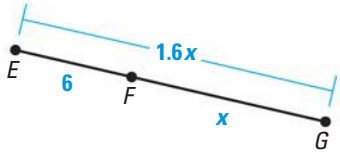
24. *VX**25.** *WZ**26.** *VY*



27. ★ **MULTIPLE CHOICE** Use the diagram. What is the length of $\overline{EG}$?

Ⓐ 1 Ⓑ 4.4

Ⓒ 10 Ⓓ 16



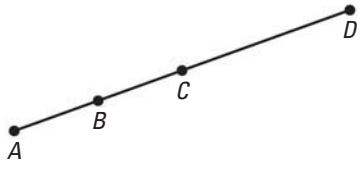
ALGEBRA **Point *S* is between *R* and *T* on $\overline{RT}$. Use the given information to write an equation in terms of *x*. Solve the equation. Then find *RS* and *ST*.**

28. $RS = 2x + 10$, $ST = x - 4$, $RT = 21$

29. $RS = 3x - 16$, $ST = 4x - 8$, $RT = 60$

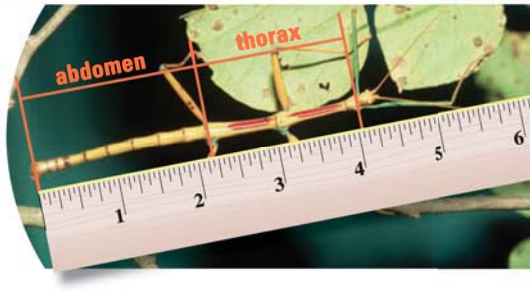
30. $RS = 2x - 8$, $ST = 3x - 10$, $RT = 17$

31. **CHALLENGE** In the diagram, $\overline{AB} \cong \overline{BC}$, $\overline{AC} \cong \overline{CD}$, and $AD = 12$. Find the lengths of all the segments in the diagram. Suppose you choose one of the segments at random. What is the probability that the measure of the segment is greater than 3? *Explain*.



PROBLEM SOLVING

32. **SCIENCE** The photograph shows an insect called a walkingstick. Use the ruler to estimate the length of the abdomen and the length of the thorax to the nearest $\frac{1}{4}$ inch. About how much longer is the walkingstick's abdomen than its thorax?



@HomeTutor for problem solving help at classzone.com

EXAMPLE 2 on p. 10 for Ex. 33

33. **MODEL AIRPLANE** In 2003, a remote-controlled model airplane became the first ever to fly nonstop across the Atlantic Ocean. The map shows the airplane's position at three different points during its flight.

A Leave Cape Spear, Newfoundland

B Approximate position after about 1 day

C Land at Mannin Bay, Ireland, after nearly 38 hours

a. Find the total distance the model airplane flew.

b. The model airplane's flight lasted nearly 38 hours. Estimate the airplane's average speed in miles per hour.

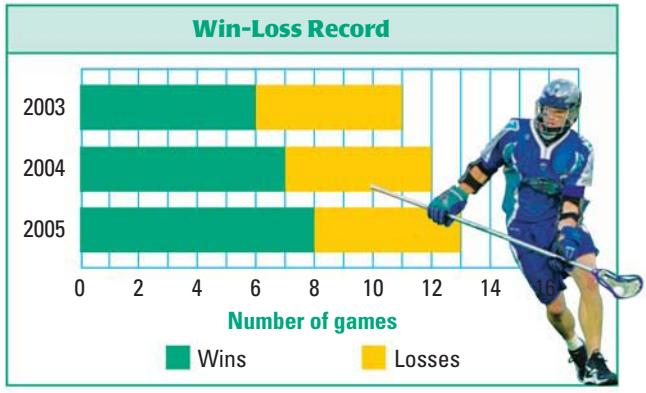
@HomeTutor for problem solving help at classzone.com

34. ★ **SHORT RESPONSE** The bar graph shows the win-loss record for a lacrosse team over a period of three years.

a. Use the scale to find the length of the yellow bar for each year. What does the length represent?

b. For each year, find the percent of games lost by the team.

c. *Explain* how you are applying the Segment Addition Postulate when you find information from a stacked bar graph like the one shown.



35. **MULTI-STEP PROBLEM** A climber uses a rope to descend a vertical cliff. Let A represent the point where the rope is secured at the top of the cliff, let B represent the climber's position, and let C represent the point where the rope is secured at the bottom of the cliff.

a. **Model** Draw and label a line segment that represents the situation.

b. **Calculate** If AC is 52 feet and AB is 31 feet, how much farther must the climber descend to reach the bottom of the cliff?

Animated Geometry at classzone.com

36. **CHALLENGE** Four cities lie along a straight highway in this order: City A, City B, City C, and City D. The distance from City A to City B is 5 times the distance from City B to City C. The distance from City A to City D is 2 times the distance from City A to City B. Copy and complete the mileage chart.

	City A	City B	City C	City D
City A		?	?	?
City B	?		?	?
City C	?	?		10 mi
City D	?	?	?	

MIXED REVIEW

PREVIEW
Prepare for Lesson 1.3 in Exs. 37–42.

Simplify the expression. Write your answer in simplest radical form. *(p. 874)*

37. $\sqrt{45 + 99}$ **38.** $\sqrt{14 + 36}$ **39.** $\sqrt{42 + (-2)^2}$

Solve the equation. *(p. 875)*

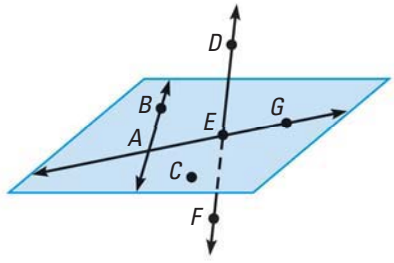
40. $4m + 5 = 7 + 6m$ **41.** $13 - 4h = 3h - 8$ **42.** $17 + 3x = 18x - 28$

Use the diagram to decide whether the statement is *true* or *false*. *(p. 2)*

43. Points A, C, E, and G are coplanar.

44. $\overleftrightarrow{DF}$ and $\overleftrightarrow{AG}$ intersect at point E.

45. $\overrightarrow{AE}$ and $\overrightarrow{EG}$ are opposite rays.



EXTRA PRACTICE for Lesson 1.2, p. 896 **ONLINE QUIZ** at classzone.com

1.3 Use Midpoint and Distance Formulas

Before You found lengths of segments.

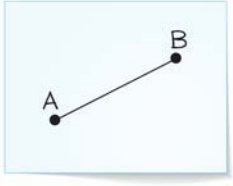
Now You will find lengths of segments in the coordinate plane.

Why? So you can find an unknown length, as in Example 1.

Key Vocabulary
- **midpoint**
- **segment bisector**

ACTIVITY Fold a Segment Bisector

STEP 1

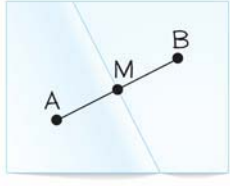


Draw $\overline{AB}$ on a piece of paper.

STEP 2

Fold the paper so that *B* is on top of *A*.

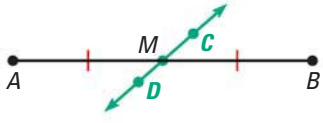
STEP 3



Label point *M*. Compare *AM*, *MB*, and *AB*.

MIDPOINTS AND BISECTORS The **midpoint** of a segment is the point that divides the segment into two congruent segments. A **segment bisector** is a point, ray, line, line segment, or plane that intersects the segment at its midpoint. A midpoint or a segment bisector *bisects* a segment.

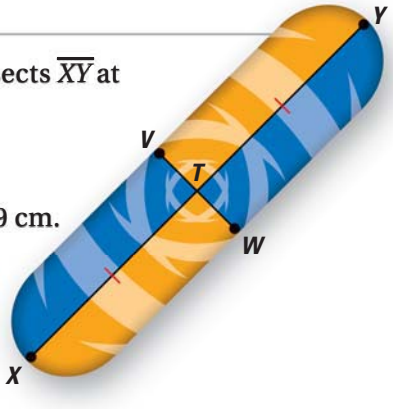
***M* is the midpoint of $\overline{AB}$.**
So, $\overline{AM} \cong \overline{MB}$ and *AM* = *MB*.



$\overleftrightarrow{CD}$ is a segment bisector of $\overline{AB}$.
So, $\overline{AM} \cong \overline{MB}$ and *AM* = *MB*.

EXAMPLE 1 Find segment lengths

SKATEBOARD In the skateboard design, $\overline{VW}$ bisects $\overline{XY}$ at point *T*, and *XT* = 39.9 cm. Find *XY*.



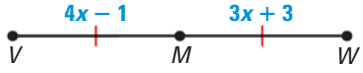
Solution

Point *T* is the midpoint of $\overline{XY}$. So, *XT* = *TY* = 39.9 cm.

XY = *XT* + *TY*	Segment Addition Postulate
= 39.9 + 39.9	Substitute.
= 79.8 cm	Add.

EXAMPLE 2 Use algebra with segment lengths

ALGEBRA Point M is the midpoint of $\overline{VW}$. Find the length of $\overline{VM}$.



Solution

REVIEW ALGEBRA
For help with solving equations, see p. 875.

STEP 1 **Write** and solve an equation. Use the fact that that $VM = MW$.

$VM = MW$	Write equation.
$4x - 1 = 3x + 3$	Substitute.
$x - 1 = 3$	Subtract $3x$ from each side.
$x = 4$	Add 1 to each side.

STEP 2 **Evaluate** the expression for VM when $x = 4$.

$VM = 4x - 1 = 4(4) - 1 = 15$

▸ So, the length of $\overline{VM}$ is 15.

CHECK Because $VM = MW$, the length of $\overline{MW}$ should be 15. If you evaluate the expression for MW, you should find that $MW = 15$.

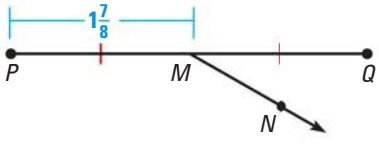
$MW = 3x + 3 = 3(4) + 3 = 15$ ✓

GUIDED PRACTICE for Examples 1 and 2

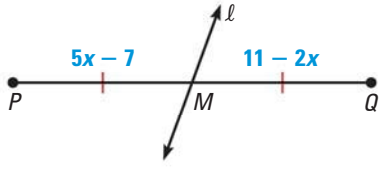
READ DIRECTIONS
Always read direction lines carefully. Notice that this direction line has two parts.

In Exercises 1 and 2, identify the segment bisector of $\overline{PQ}$. Then find PQ.

1.



2.



COORDINATE PLANE You can use the coordinates of the endpoints of a segment to find the coordinates of the midpoint.

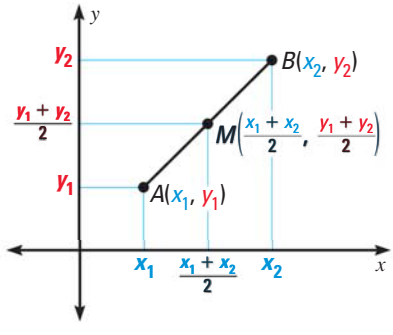
KEY CONCEPT *For Your Notebook*

The Midpoint Formula

The coordinates of the midpoint of a segment are the averages of the x-coordinates and of the y-coordinates of the endpoints.

If $A(x_1, y_1)$ and $B(x_2, y_2)$ are points in a coordinate plane, then the midpoint M of $\overline{AB}$ has coordinates

$$\left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right).$$



EXAMPLE 3 Use the Midpoint Formula

a. FIND MIDPOINT The endpoints of $\overline{RS}$ are $R(1, -3)$ and $S(4, 2)$. Find the coordinates of the midpoint M.

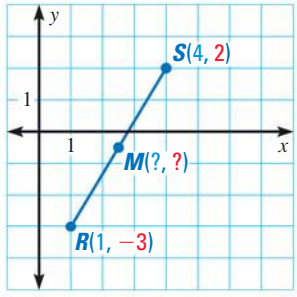
b. FIND ENDPOINT The midpoint of $\overline{JK}$ is $M(2, 1)$. One endpoint is $J(1, 4)$. Find the coordinates of endpoint K.

Solution

a. FIND MIDPOINT Use the Midpoint Formula.

$$M\left(\frac{1+4}{2}, \frac{-3+2}{2}\right) = M\left(\frac{5}{2}, -\frac{1}{2}\right)$$

▶ The coordinates of the midpoint M are $\left(\frac{5}{2}, -\frac{1}{2}\right)$.



b. FIND ENDPOINT Let (x, y) be the coordinates of endpoint K. Use the Midpoint Formula.

STEP 1 Find x.

$$\frac{1+x}{2} = 2$$

$$1 + x = 4$$

$$x = 3$$

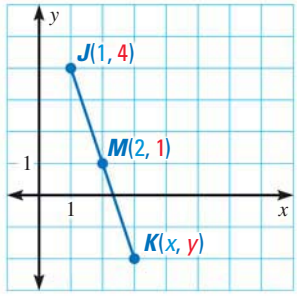
STEP 2 Find y.

$$\frac{4+y}{2} = 1$$

$$4 + y = 2$$

$$y = -2$$

▶ The coordinates of endpoint K are $(3, -2)$.



CLEAR FRACTIONS Multiply each side of the equation by the denominator to clear the fraction.

✓ GUIDED PRACTICE for Example 3

3. The endpoints of $\overline{AB}$ are $A(1, 2)$ and $B(7, 8)$. Find the coordinates of the midpoint M.

4. The midpoint of $\overline{VW}$ is $M(-1, -2)$. One endpoint is $W(4, 4)$. Find the coordinates of endpoint V.

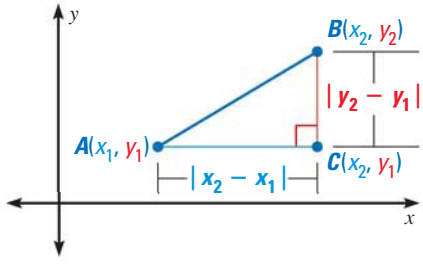
DISTANCE FORMULA The Distance Formula is a formula for computing the distance between two points in a coordinate plane.

KEY CONCEPT *For Your Notebook*

The Distance Formula

If $A(x_1, y_1)$ and $B(x_2, y_2)$ are points in a coordinate plane, then the distance between A and B is

$$AB = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}.$$



READ DIAGRAMS The red mark at one corner of the triangle shown indicates a right triangle.

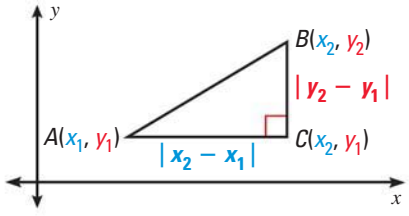
The Distance Formula is based on the *Pythagorean Theorem*, which you will see again when you work with right triangles in Chapter 7.

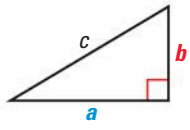
Distance Formula

$$(AB)^2 = (x_2 - x_1)^2 + (y_2 - y_1)^2$$

Pythagorean Theorem

$$c^2 = a^2 + b^2$$





EXAMPLE 4 Standardized Test Practice

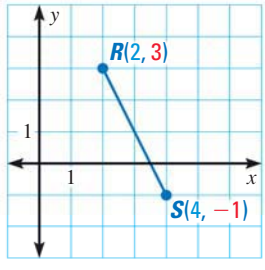
ELIMINATE CHOICES
Drawing a diagram can help you eliminate choices. You can see that choice A is not large enough to be *RS*.

What is the approximate length of $\overline{RS}$ with endpoints $R(2, 3)$ and $S(4, -1)$?

(A) 1.4 units (B) 4.0 units (C) 4.5 units (D) 6 units

Solution

Use the Distance Formula. You may find it helpful to draw a diagram.



$$RS = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$ **Distance Formula**

$$= \sqrt{[(4 - 2)]^2 + [(-1) - 3]^2}$$ **Substitute.**

$$= \sqrt{(2)^2 + (-4)^2}$$ **Subtract.**

$$= \sqrt{4 + 16}$$ **Evaluate powers.**

$$= \sqrt{20}$$ **Add.**

READ SYMBOLS
The symbol ≈ means "is approximately equal to."

$$\approx 4.47$$ **Use a calculator to approximate the square root.**

▶ The correct answer is C. (A) (B) (C) (D)

GUIDED PRACTICE for Example 4

5. In Example 4, does it matter which ordered pair you choose to substitute for (x_1, y_1) and which ordered pair you choose to substitute for (x_2, y_2)? *Explain.*

6. What is the approximate length of $\overline{AB}$, with endpoints $A(-3, 2)$ and $B(1, -4)$?

(A) 6.1 units (B) 7.2 units (C) 8.5 units (D) 10.0 units

1.3 EXERCISES

HOMEWORK KEY

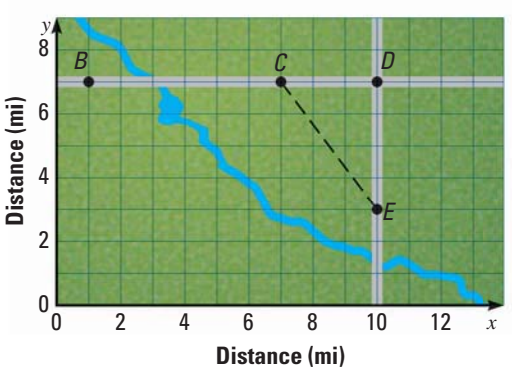
MIXED REVIEW of Problem Solving

STATE TEST PRACTICE
classzone.com

Lessons 1.1–1.3

1. MULTI-STEP PROBLEM The diagram shows existing roads ($\overleftrightarrow{BD}$ and $\overleftrightarrow{DE}$) and a new road ($\overline{CE}$) under construction.



a. If you drive from point B to point E on existing roads, how far do you travel?

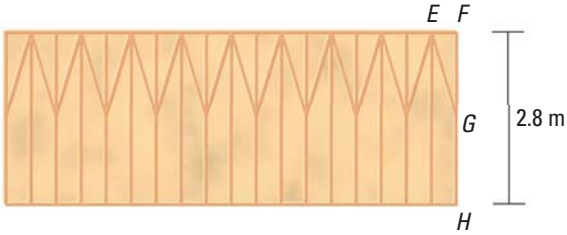
b. If you use the new road as you drive from B to E, about how far do you travel? Round to the nearest tenth of a mile if necessary.

c. About how much shorter is the trip from B to E if you use the new road?

2. GRIDDED ANSWER Point M is the midpoint of $\overline{PQ}$. If $PM = 23x + 5$ and $MQ = 25x - 4$, find the length of $\overline{PQ}$.

3. GRIDDED ANSWER You are hiking on a trail that lies along a straight railroad track. The total length of the trail is 5.4 kilometers. You have been hiking for 45 minutes at an average speed of 2.4 kilometers per hour. How much farther (in kilometers) do you need to hike to reach the end of the trail?

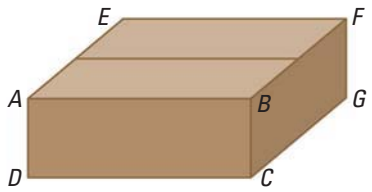
4. SHORT RESPONSE The diagram below shows the frame for a wall. $\overline{FH}$ represents a vertical board, and $\overline{EG}$ represents a brace. If $FG = 143$ cm, does the brace bisect $\overline{FH}$? If not, how long should $\overline{FG}$ be so that the brace does bisect $\overline{FH}$? *Explain*.



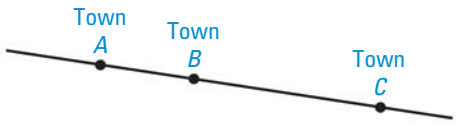
5. SHORT RESPONSE Point E is the midpoint of $\overline{AB}$ and the midpoint of $\overline{CD}$. The endpoints of $\overline{AB}$ are $A(-4, 5)$ and $B(6, -5)$. The coordinates of point C are $(2, 8)$. Find the coordinates of point D. *Explain* how you got your answer.

6. OPEN-ENDED The distance around a figure is its *perimeter*. Choose four points in a coordinate plane that can be connected to form a rectangle with a perimeter of 16 units. Then choose four other points and draw a different rectangle that has a perimeter of 16 units. Show how you determined that each rectangle has a perimeter of 16 units.

7. SHORT RESPONSE Use the diagram of a box. What are all the names that can be used to describe the plane that contains points B, F, and C? Name the intersection of planes ABC and BFE. *Explain*.



8. EXTENDED RESPONSE Jill is a salesperson who needs to visit towns A, B, and C. On the map below, $AB = 18.7$ km and $BC = 2AB$. Assume Jill travels along the road shown.



a. Find the distance Jill travels if she starts at Town A, visits Towns B and C, and then returns to Town A.

b. About how much time does Jill spend driving if her average driving speed is 70 kilometers per hour?

c. Jill needs to spend 2.5 hours in each town. Can she visit all three towns and return to Town A in an 8 hour workday? *Explain*.

1.4 Measure and Classify Angles

Before You named and measured line segments.

Now You will name, measure, and classify angles.

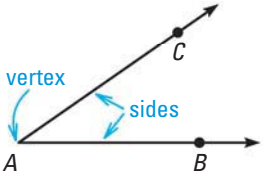
Why? So you can identify congruent angles, as in Example 4.

Key Vocabulary

- **angle**
  acute, right, obtuse, straight
- **sides, vertex of an angle**
- **measure of an angle**
- **congruent angles**
- **angle bisector**

An **angle** consists of two different rays with the same endpoint. The rays are the **sides** of the angle. The endpoint is the **vertex** of the angle.

The angle with sides $\overrightarrow{AB}$ and $\overrightarrow{AC}$ can be named $\angle BAC$, $\angle CAB$, or $\angle A$. Point A is the vertex of the angle.



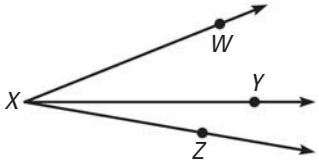
EXAMPLE 1 Name angles

Name the three angles in the diagram.

$\angle WXY$, or $\angle YXW$

$\angle YXZ$, or $\angle ZXY$

$\angle WXZ$, or $\angle ZXW$



You should not name any of these angles $\angle X$ because all three angles have X as their vertex.

MEASURING ANGLES A protractor can be used to approximate the *measure* of an angle. An angle is measured in units called *degrees* (°). For instance, the measure of $\angle WXZ$ in Example 1 above is 32°. You can write this statement in two ways.

Words The measure of $\angle WXZ$ is 32°.

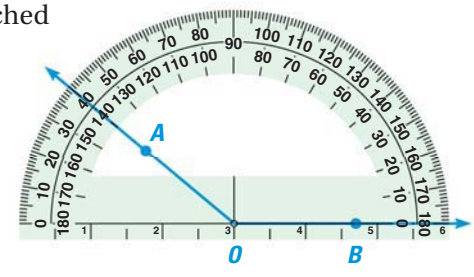
Symbols $m\angle WXZ = 32°$

POSTULATE *For Your Notebook*

POSTULATE 3 Protractor Postulate

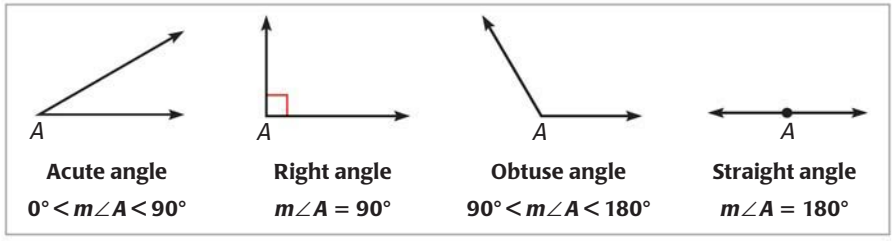
Consider $\overrightarrow{OB}$ and a point A on one side of $\overrightarrow{OB}$. The rays of the form $\overrightarrow{OA}$ can be matched one to one with the real numbers from 0 to 180.

The **measure** of $\angle AOB$ is equal to the absolute value of the difference between the real numbers for $\overrightarrow{OA}$ and $\overrightarrow{OB}$.



CLASSIFYING ANGLES Angles can be classified as **acute**, **right**, **obtuse**, and **straight**, as shown below.

READ DIAGRAMS
A red square inside an angle indicates that the angle is a right angle.

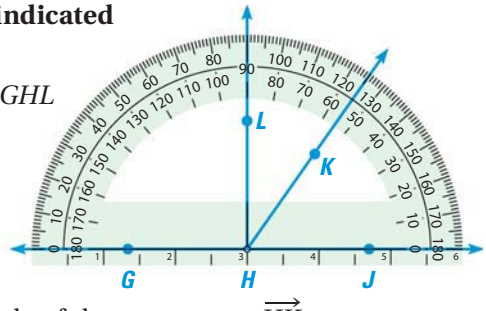


Acute angle	Right angle	Obtuse angle	Straight angle
$0° < m\angle A < 90°$	$m\angle A = 90°$	$90° < m\angle A < 180°$	$m\angle A = 180°$

EXAMPLE 2 Measure and classify angles

Use the diagram to find the measure of the indicated angle. Then classify the angle.

a. $\angle KHJ$ **b.** $\angle GHK$ **c.** $\angle GHJ$ **d.** $\angle GHL$



Solution

A protractor has an inner and an outer scale. When you measure an angle, check to see which scale to use.

a. $\overrightarrow{HJ}$ is lined up with the 0° on the inner scale of the protractor. $\overrightarrow{HK}$ passes through 55° on the inner scale. So, $m\angle KHJ = 55°$. It is an acute angle.

b. $\overrightarrow{HG}$ is lined up with the 0° on the outer scale, and $\overrightarrow{HK}$ passes through 125° on the outer scale. So, $m\angle GHK = 125°$. It is an obtuse angle.

c. $m\angle GHJ = 180°$. It is a straight angle.

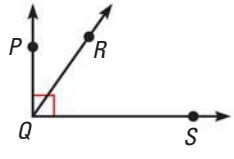
d. $m\angle GHL = 90°$. It is a right angle.

AnimatedGeometry at classzone.com

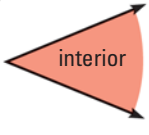
GUIDED PRACTICE for Examples 1 and 2

1. Name all the angles in the diagram at the right. Which angle is a right angle?

2. Draw a pair of opposite rays. What type of angle do the rays form?



READ DIAGRAMS
A point is in the *interior* of an angle if it is between points that lie on each side of the angle.

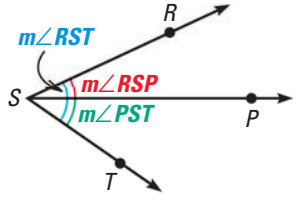


POSTULATE *For Your Notebook*

POSTULATE 4 Angle Addition Postulate

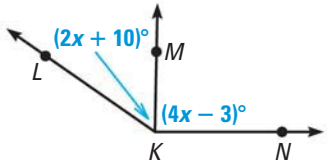
Words If P is in the interior of $\angle RST$, then the measure of $\angle RST$ is equal to the sum of the measures of $\angle RSP$ and $\angle PST$.

Symbols If P is in the interior of $\angle RST$, then $m\angle RST = m\angle RSP + m\angle PST$.



EXAMPLE 3 Find angle measures

ALGEBRA Given that $m\angle LKN = 145°$, find $m\angle LKM$ and $m\angle MKN$.



Solution

STEP 1 **Write** and solve an equation to find the value of x.

$m\angle LKN = m\angle LKM + m\angle MKN$ — Angle Addition Postulate

$145° = (2x + 10)° + (4x - 3)°$ — Substitute angle measures.

$145 = 6x + 7$ — Combine like terms.

$138 = 6x$ — Subtract 7 from each side.

$23 = x$ — Divide each side by 6.

STEP 2 **Evaluate** the given expressions when $x = 23$.

$m\angle LKM = (2x + 10)° = (2 \cdot 23 + 10)° = 56°$

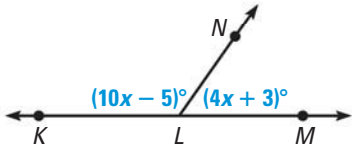
$m\angle MKN = (4x - 3)° = (4 \cdot 23 - 3)° = 89°$

▶ So, $m\angle LKM = 56°$ and $m\angle MKN = 89°$.

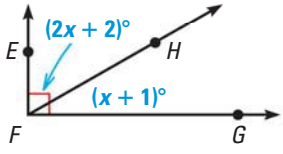
GUIDED PRACTICE for Example 3

Find the indicated angle measures.

3. Given that $\angle KLM$ is a straight angle, find $m\angle KLN$ and $m\angle NLM$.

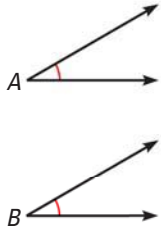


4. Given that $\angle EFG$ is a right angle, find $m\angle EFH$ and $m\angle HFG$.



CONGRUENT ANGLES Two angles are **congruent angles** if they have the same measure. In the diagram below, you can say that "the measure of angle A is equal to the measure of angle B," or you can say "angle A *is congruent to* angle B."

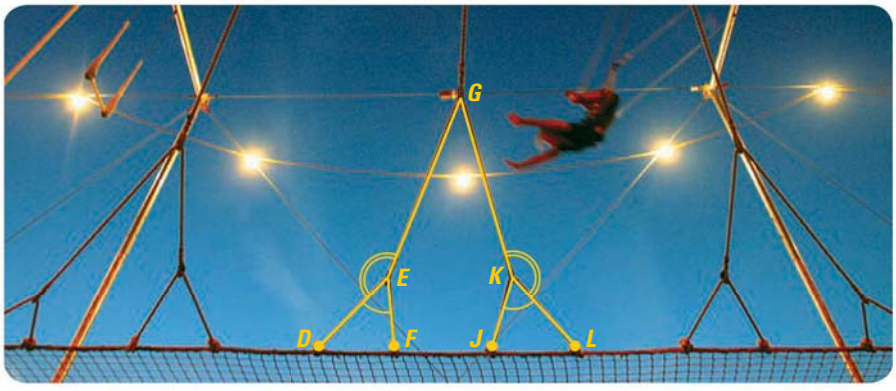
READ DIAGRAMS
Matching arcs are used to show that angles are congruent. If more than one pair of angles are congruent, double arcs are used, as in Example 4 on page 27.



Angle measures are equal.	Angles are congruent.
$m\angle A = m\angle B$	$\angle A \cong \angle B$
"is equal to"	"is congruent to"

EXAMPLE 4 Identify congruent angles

TRAPEZE The photograph shows some of the angles formed by the ropes in a trapeze apparatus. Identify the congruent angles. If $m\angle DEG = 157°$, what is $m\angle GKL$?



Solution

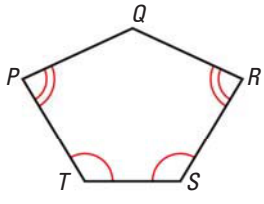
There are two pairs of congruent angles:

$\angle DEF \cong \angle JKL$ and $\angle DEG \cong \angle GKL$.

Because $\angle DEG \cong \angle GKL$, $m\angle DEG = m\angle GKL$. So, $m\angle GKL = 157°$.

GUIDED PRACTICE for Example 4

Use the diagram shown at the right.

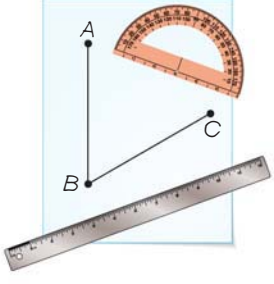


5. Identify all pairs of congruent angles in the diagram.

6. In the diagram, $m\angle PQR = 130°$, $m\angle QRS = 84°$, and $m\angle TSR = 121°$. Find the other angle measures in the diagram.

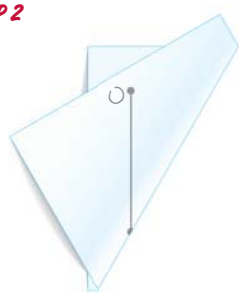
ACTIVITY FOLD AN ANGLE BISECTOR

STEP 1



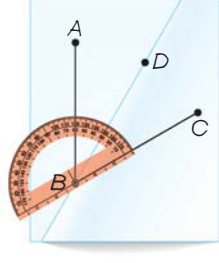
Use a straightedge to draw and label an acute angle, $\angle ABC$.

STEP 2



Fold the paper so that $\overrightarrow{BC}$ is on top of $\overrightarrow{BA}$.

STEP 3

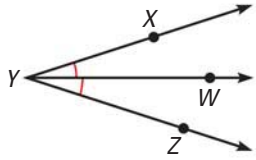


Draw a point D on the fold inside $\angle ABC$. Then measure $\angle ABD$, $\angle DBC$, and $\angle ABC$. What do you observe?

An **angle bisector** is a ray that divides an angle into two angles that are congruent. In the activity on page 27, $\overrightarrow{BD}$ bisects $\angle ABC$. So, $\angle ABD \cong \angle DBC$ and $m\angle ABD = m\angle DBC$.

EXAMPLE 5 Double an angle measure

In the diagram at the right, $\overrightarrow{YW}$ bisects $\angle XYZ$, and $m\angle XYW = 18°$. Find $m\angle XYZ$.



Solution

By the Angle Addition Postulate, $m\angle XYZ = m\angle XYW + m\angle WYZ$. Because $\overrightarrow{YW}$ bisects $\angle XYZ$, you know that $\angle XYW \cong \angle WYZ$.

So, $m\angle XYW = m\angle WYZ$, and you can write

$$m\angle XYZ = m\angle XYW + m\angle WYZ = 18° + 18° = 36°.$$

GUIDED PRACTICE for Example 5

7. Angle MNP is a straight angle, and $\overrightarrow{NQ}$ bisects $\angle MNP$. Draw $\angle MNP$ and $\overrightarrow{NQ}$. Use arcs to mark the congruent angles in your diagram, and give the angle measures of these congruent angles.

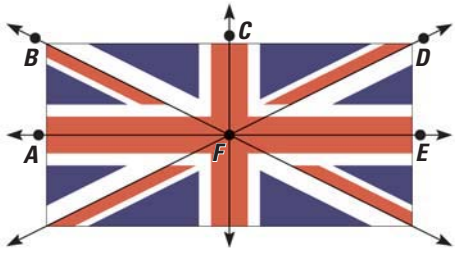
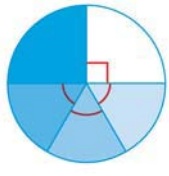
a. Which angles are acute? obtuse? right?

b. Identify the congruent angles.

c. If $m\angle AFB = 26°$, find $m\angle DFE$, $m\angle BFC$, $m\angle CFD$, $m\angle AFC$, $m\angle AFD$, and $m\angle BFD$. *Explain.*



63. **CHALLENGE** Create a set of data that could be represented by the circle graph at the right. *Explain* your reasoning.



MIXED REVIEW

PREVIEW
Prepare for Lesson 1.5 in Ex. 64.

64. You and a friend go out to dinner and each pay for your own meal. The total cost of the two meals is $25. Your meal cost $4 more than your friend's meal. How much does each meal cost? *(p. 894)*

Graph the inequality on a number line. Tell whether the graph is a *segment*, a *ray* or *rays*, a *point*, or a *line*. *(p. 2)*

65. $x \le -8$ **66.** $x \ge 6$ **67.** $-3 \le x \le 5$

68. $x \ge -7$ and $x \le -1$ **69.** $x \ge -2$ or $x \le 4$ **70.** $|x| \ge 0$

Find the coordinate of the midpoint of the segment. *(p. 15)*

71. 
72. 

73. 
1.4 Copy and Bisect Segments and Angles

MATERIALS • compass • straightedge

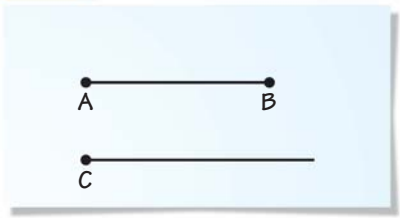
QUESTION How can you copy and bisect segments and angles?

A **construction** is a geometric drawing that uses a limited set of tools, usually a *compass* and *straightedge*. You can use a compass and straightedge (a ruler without marks) to construct a segment that is congruent to a given segment, and an angle that is congruent to a given angle.

EXPLORE 1 Copy a segment

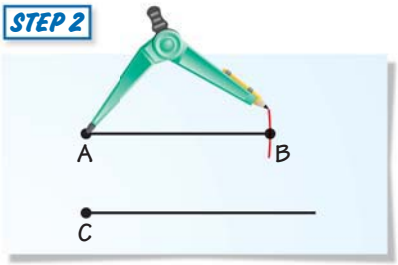
Use the following steps to construct a segment that is congruent to $\overline{AB}$.

STEP 1



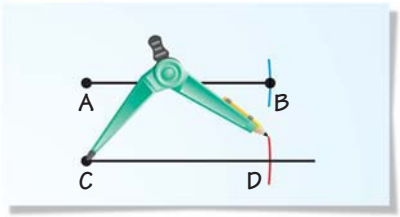
Draw a segment Use a straightedge to draw a segment longer than $\overline{AB}$. Label point C on the new segment.

STEP 2



Measure length Set your compass at the length of $\overline{AB}$.

STEP 3

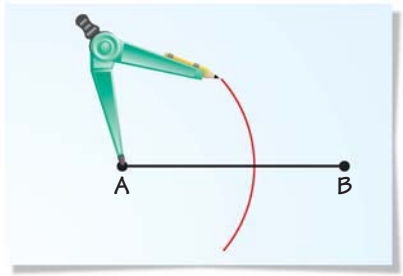


Copy length Place the compass at C. Mark point D on the new segment. $\overline{CD} \cong \overline{AB}$.

EXPLORE 2 Bisect a segment

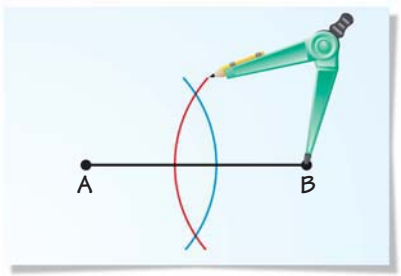
Use the following steps to construct a bisector of $\overline{AB}$ and to find the midpoint M of $\overline{AB}$.

STEP 1



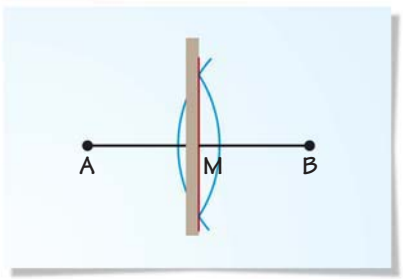
Draw an arc Place the compass at A. Use a compass setting that is greater than half the length of $\overline{AB}$. Draw an arc.

STEP 2



Draw a second arc Keep the same compass setting. Place the compass at B. Draw an arc. It should intersect the other arc at two points.

STEP 3

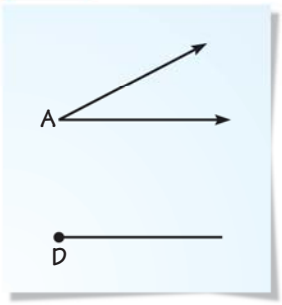


Bisect segment Draw a segment through the two points of intersection. This segment bisects $\overline{AB}$ at M, the midpoint of $\overline{AB}$.

EXPLORE 3 Copy an angle

Use the following steps to construct an angle that is congruent to $\angle A$. In this construction, the *radius* of an arc is the distance from the point where the compass point rests (the *center* of the arc) to a point on the arc drawn by the compass.

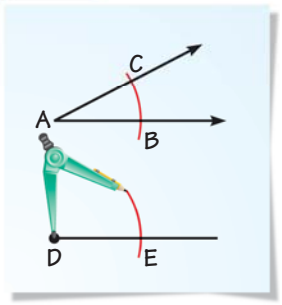
STEP 1



Draw a segment

Draw a segment. Label a point D on the segment.

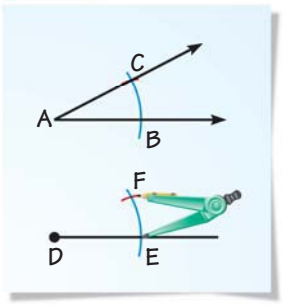
STEP 2



Draw arcs

Draw an arc with center A. Using the same radius, draw an arc with center D.

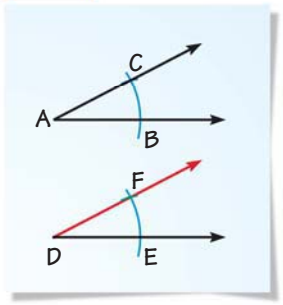
STEP 3



Draw arcs

Label B, C, and E. Draw an arc with radius BC and center E. Label the intersection F.

STEP 4



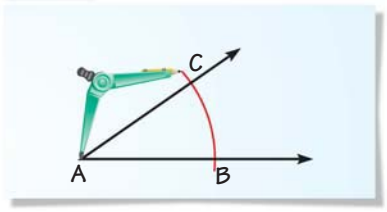
Draw a ray

Draw $\overrightarrow{DF}$. $\angle EDF \cong \angle BAC$.

EXPLORE 4 Bisect an angle

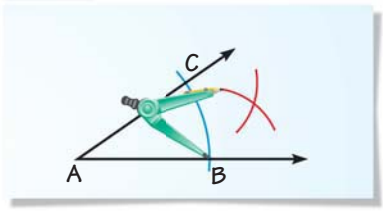
Use the following steps to construct an angle bisector of $\angle A$.

STEP 1



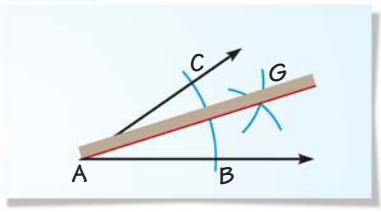
Draw an arc Place the compass at A. Draw an arc that intersects both sides of the angle. Label the intersections C and B.

STEP 2



Draw arcs Place the compass at C. Draw an arc. Then place the compass point at B. Using the same radius, draw another arc.

STEP 3



Draw a ray Label the intersection G. Use a straightedge to draw a ray through A and G. $\overrightarrow{AG}$ bisects $\angle A$.

DRAW CONCLUSIONS Use your observations to complete these exercises

1. *Describe* how you could use a compass and a straightedge to draw a segment that is twice as long as a given segment.
2. Draw an obtuse angle. Copy the angle using a compass and a straightedge. Then bisect the angle using a compass and straightedge.

1.5 Describe Angle Pair Relationships

Before You used angle postulates to measure and classify angles.

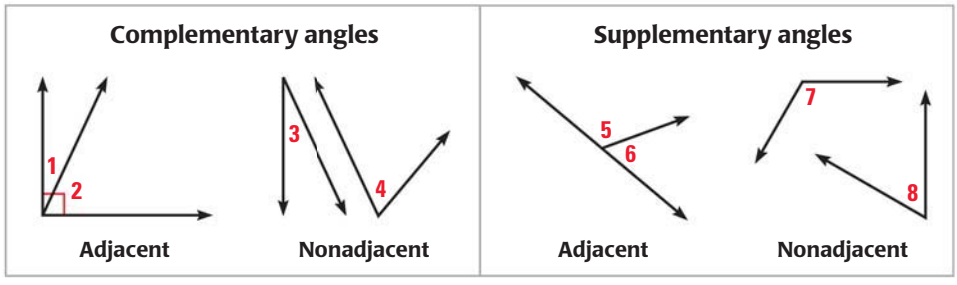
Now You will use special angle relationships to find angle measures.

Why? So you can find measures in a building, as in Ex. 53.

Key Vocabulary
- **complementary angles**
- **supplementary angles**
- **adjacent angles**
- **linear pair**
- **vertical angles**

Two angles are **complementary angles** if the sum of their measures is 90°. Each angle is the *complement* of the other. Two angles are **supplementary angles** if the sum of their measures is 180°. Each angle is the *supplement* of the other.

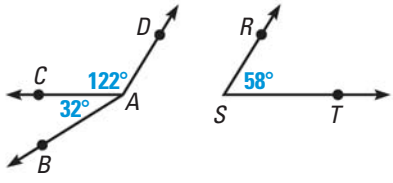
Complementary angles and supplementary angles can be *adjacent angles* or *nonadjacent angles*. **Adjacent angles** are two angles that share a common vertex and side, but have no common interior points.



EXAMPLE 1 Identify complements and supplements

AVOID ERRORS
In Example 1, $\angle DAC$ and $\angle DAB$ share a common vertex. But they share common interior points, so they are *not* adjacent angles.

In the figure, name a pair of complementary angles, a pair of supplementary angles, and a pair of adjacent angles.



Solution

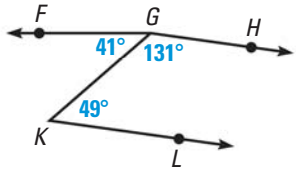
Because $32° + 58° = 90°$, $\angle BAC$ and $\angle RST$ are complementary angles.

Because $122° + 58° = 180°$, $\angle CAD$ and $\angle RST$ are supplementary angles.

Because $\angle BAC$ and $\angle CAD$ share a common vertex and side, they are adjacent.

✓ GUIDED PRACTICE for Example 1

1. In the figure, name a pair of complementary angles, a pair of supplementary angles, and a pair of adjacent angles.



2. Are $\angle KGH$ and $\angle LKG$ adjacent angles? Are $\angle FGK$ and $\angle FGH$ adjacent angles? *Explain*.

EXAMPLE 2 Find measures of a complement and a supplement

READ DIAGRAMS
Angles are sometimes named with numbers. An angle measure in a diagram has a degree symbol. An angle name does not.

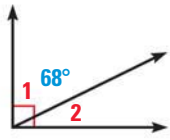
a. Given that $\angle 1$ is a complement of $\angle 2$ and $m\angle 1 = 68°$, find $m\angle 2$.

b. Given that $\angle 3$ is a supplement of $\angle 4$ and $m\angle 4 = 56°$, find $m\angle 3$.

Solution

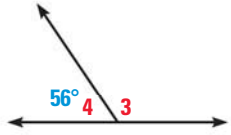
a. You can draw a diagram with complementary adjacent angles to illustrate the relationship.

$m\angle 2 = 90° - m\angle 1 = 90° - 68° = 22°$



b. You can draw a diagram with supplementary adjacent angles to illustrate the relationship.

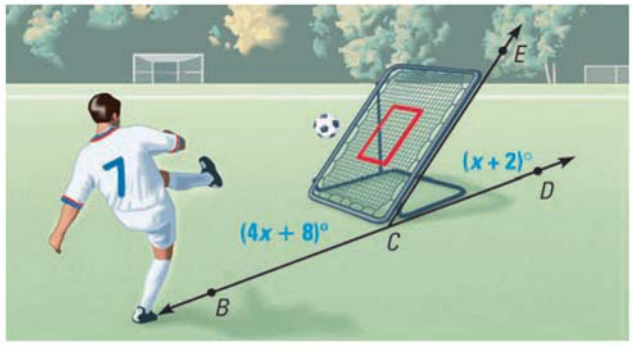
$m\angle 3 = 180° - m\angle 4 = 180° - 56° = 124°$



EXAMPLE 3 Find angle measures

READ DIAGRAMS
In a diagram, you can assume that a line that looks straight *is* straight. In Example 3, *B*, *C*, and *D* lie on $\overleftrightarrow{BD}$. So, $\angle BCD$ is a straight angle.

SPORTS When viewed from the side, the frame of a ball-return net forms a pair of supplementary angles with the ground. Find $m\angle BCE$ and $m\angle ECD$.



Solution

STEP 1 **Use** the fact that the sum of the measures of supplementary angles is 180°.

$m\angle BCE + m\angle ECD = 180°$ **Write equation.**

$(4x + 8)° + (x + 2)° = 180°$ **Substitute.**

$5x + 10 = 180$ **Combine like terms.**

$5x = 170$ **Subtract 10 from each side.**

$x = 34$ **Divide each side by 5.**

STEP 2 **Evaluate** the original expressions when $x = 34$.

$m\angle BCE = (4x + 8)° = (4 \cdot 34 + 8)° = 144°$

$m\angle ECD = (x + 2)° = (34 + 2)° = 36°$

▸ The angle measures are 144° and 36°.

GUIDED PRACTICE for Examples 2 and 3

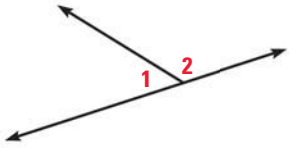
3. Given that $\angle 1$ is a complement of $\angle 2$ and $m\angle 2 = 8°$, find $m\angle 1$.

4. Given that $\angle 3$ is a supplement of $\angle 4$ and $m\angle 3 = 117°$, find $m\angle 4$.

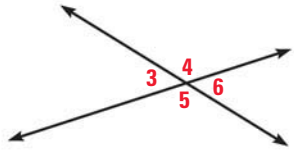
5. $\angle LMN$ and $\angle PQR$ are complementary angles. Find the measures of the angles if $m\angle LMN = (4x - 2)°$ and $m\angle PQR = (9x + 1)°$.

ANGLE PAIRS Two adjacent angles are a **linear pair** if their noncommon sides are opposite rays. The angles in a linear pair are supplementary angles.

Two angles are **vertical angles** if their sides form two pairs of opposite rays.



∠1 and ∠2 are a linear pair.

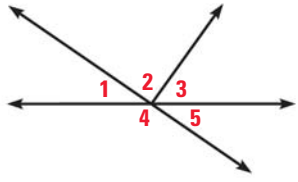


∠3 and ∠6 are vertical angles.
∠4 and ∠5 are vertical angles.

EXAMPLE 4 Identify angle pairs

AVOID ERRORS
In the diagram, one side of ∠1 and one side of ∠3 are opposite rays. But the angles are not a linear pair because they are not adjacent.

Identify all of the linear pairs and all of the vertical angles in the figure at the right.



Solution

To find vertical angles, look for angles formed by intersecting lines.

▶ ∠1 and ∠5 are vertical angles.

To find linear pairs, look for adjacent angles whose noncommon sides are opposite rays.

▶ ∠1 and ∠4 are a linear pair. ∠4 and ∠5 are also a linear pair.

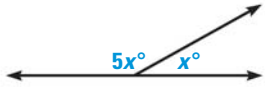
EXAMPLE 5 Find angle measures in a linear pair

ALGEBRA **Two angles form a linear pair. The measure of one angle is 5 times the measure of the other. Find the measure of each angle.**

Solution

DRAW DIAGRAMS
You may find it useful to draw a diagram to represent a word problem like the one in Example 5.

Let $x°$ be the measure of one angle. The measure of the other angle is $5x°$. Then use the fact that the angles of a linear pair are supplementary to write an equation.



$x° + 5x° = 180°$ **Write an equation.**

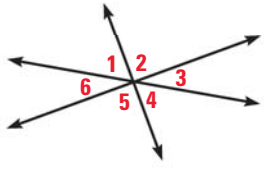
$6x = 180$ **Combine like terms.**

$x = 30$ **Divide each side by 6.**

▶ The measures of the angles are 30° and $5(30°) = 150°$.

GUIDED PRACTICE for Examples 4 and 5

6. Do any of the numbered angles in the diagram at the right form a linear pair? Which angles are vertical angles? *Explain*.

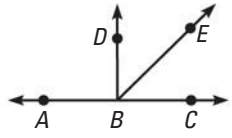


7. The measure of an angle is twice the measure of its complement. Find the measure of each angle.

CONCEPT SUMMARY *For Your Notebook*

Interpreting a Diagram

There are some things you can conclude from a diagram, and some you cannot. For example, here are some things that you ***can* conclude** from the diagram at the right:



- All points shown are coplanar.
- Points A, B, and C are collinear, and B is between A and C.
- $\overleftrightarrow{AC}$, $\overrightarrow{BD}$, and $\overrightarrow{BE}$ intersect at point B.
- $\angle DBE$ and $\angle EBC$ are adjacent angles, and $\angle ABC$ is a straight angle.
- Point E lies in the interior of $\angle DBC$.

In the diagram above, you ***cannot* conclude** that $\overline{AB} \cong \overline{BC}$, that $\angle DBE \cong \angle EBC$, or that $\angle ABD$ is a right angle. This information must be indicated, as shown at the right.

1.6 Classify Polygons

Before You classified angles.
Now You will classify polygons.
Why? So you can find lengths in a floor plan, as in Ex. 32.

Key Vocabulary
- **polygon**
  side, vertex
- **convex**
- **concave**
- ***n*-gon**
- **equilateral**
- **equiangular**
- **regular**

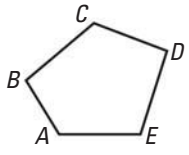
KEY CONCEPT *For Your Notebook*

Identifying Polygons

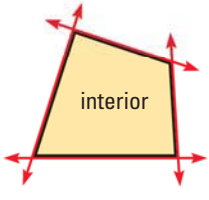
In geometry, a figure that lies in a plane is called a *plane figure*. A **polygon** is a closed plane figure with the following properties.

1. It is formed by three or more line segments called **sides**.
2. Each side intersects exactly two sides, one at each endpoint, so that no two sides with a common endpoint are collinear.

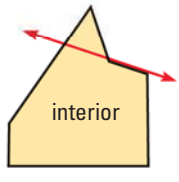
Each endpoint of a side is a **vertex** of the polygon. The plural of vertex is *vertices*. A polygon can be named by listing the vertices in consecutive order. For example, *ABCDE* and *CDEAB* are both correct names for the polygon at the right.



A polygon is **convex** if no line that contains a side of the polygon contains a point in the interior of the polygon. A polygon that is not convex is called *nonconvex* or **concave**.



convex polygon



concave polygon

EXAMPLE 1 Identify polygons

READ VOCABULARY
A *plane figure* is two-dimensional. Later, you will study three-dimensional *space figures* such as prisms and cylinders.

Tell whether the figure is a polygon and whether it is *convex* or *concave*.

a. 
b. 

c. 

d. 
Solution

a. Some segments intersect more than two segments, so it is not a polygon.

b. The figure is a convex polygon.

c. Part of the figure is not a segment, so it is not a polygon.

d. The figure is a concave polygon.

CLASSIFYING POLYGONS A polygon is named by the number of its sides.

Number of sides	Type of polygon	Number of sides	Type of polygon
3	Triangle	8	Octagon
4	Quadrilateral	9	Nonagon
5	Pentagon	10	Decagon
6	Hexagon	12	Dodecagon
7	Heptagon	*n*	*n*-gon

The term ***n*-gon**, where n is the number of a polygon's sides, can also be used to name a polygon. For example, a polygon with 14 sides is a 14-gon.

In an **equilateral** polygon, all sides are congruent. In an **equiangular** polygon, all angles in the interior of the polygon are congruent. A **regular** polygon is a convex polygon that is both equilateral and equiangular.

regular pentagon

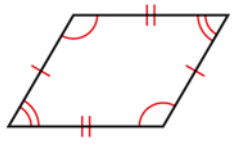
EXAMPLE 2 Classify polygons

READ DIAGRAMS
Double marks are used in part (b) of Example 2 to show that more than one pair of sides are congruent and more than one pair of angles are congruent.

Classify the polygon by the number of sides. Tell whether the polygon is equilateral, equiangular, or regular. Explain your reasoning.

a.

b.



c.

Solution

a. The polygon has 6 sides. It is equilateral and equiangular, so it is a regular hexagon.

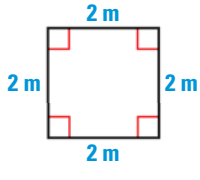
b. The polygon has 4 sides, so it is a quadrilateral. It is not equilateral or equiangular, so it is not regular.

c. The polygon has 12 sides, so it is a dodecagon. The sides are congruent, so it is equilateral. The polygon is not convex, so it is not regular.

AnimatedGeometry at classzone.com

GUIDED PRACTICE for Examples 1 and 2

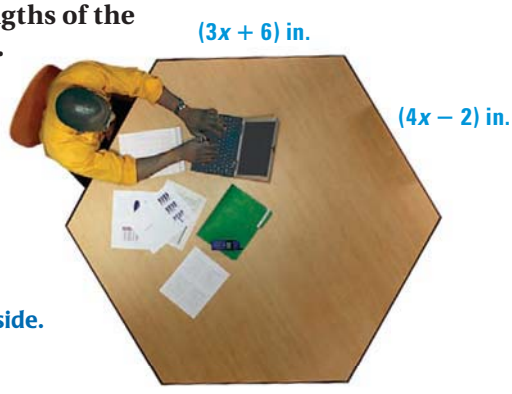
1. Sketch an example of a convex heptagon and an example of a concave heptagon.
2. Classify the polygon shown at the right by the number of sides. *Explain* how you know that the sides of the polygon are congruent and that the angles of the polygon are congruent.



EXAMPLE 3 Find side lengths

READ VOCABULARY
Hexagonal means "shaped like a hexagon."

xy ALGEBRA **A table is shaped like a regular hexagon. The expressions shown represent side lengths of the hexagonal table. Find the length of a side.**



Solution

First, write and solve an equation to find the value of x. Use the fact that the sides of a regular hexagon are congruent.

$3x + 6 = 4x - 2$ **Write equation.**

$6 = x - 2$ **Subtract 3x from each side.**

$8 = x$ **Add 2 to each side.**

Then find a side length. Evaluate one of the expressions when $x = 8$.

$3x + 6 = 3(8) + 6 = 30$

▸ The length of a side of the table is 30 inches.

GUIDED PRACTICE for Example 3

3. The expressions $8y°$ and $(9y - 15)°$ represent the measures of two of the angles in the table in Example 3. Find the measure of an angle.

1.6 EXERCISES

Keystrokes

1.7 Investigate Perimeter and Area

MATERIALS • graph paper • graphing calculator

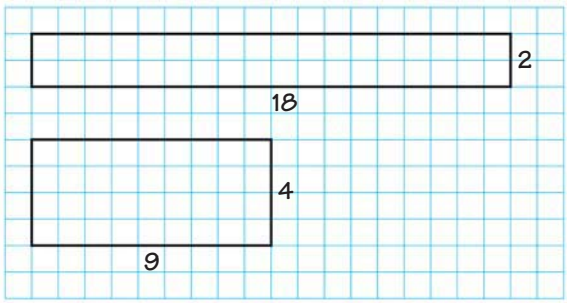
QUESTION **How can you use a graphing calculator to find the smallest possible perimeter for a rectangle with a given area?**

You can use the formulas below to find the perimeter P and the area A of a rectangle with length ℓ and width w.

$$P = 2\ell + 2w \qquad A = \ell w$$

EXPLORE **Find perimeters of rectangles with fixed areas**

STEP 1 ***Draw rectangles*** Draw different rectangles, each with an area of 36 square units. Use lengths of 2, 4, 6, 8, 10, 12, 14, 16, and 18 units.



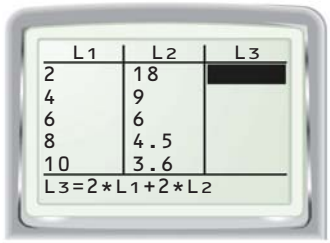
STEP 2 ***Enter data*** Use the STATISTICS menu on a graphing calculator. Enter the rectangle lengths in List 1. Use the keystrokes below to calculate and enter the rectangle widths and perimeters in Lists 2 and 3.

Keystrokes for entering widths in List 2:

36 ÷ 2nd [L1] ENTER

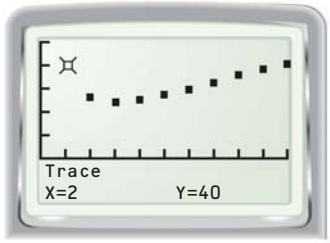
Keystrokes for entering perimeters in List 3:

2 × 2nd [L1] + 2nd 2 × [L2] ENTER



STEP 3 ***Make a scatter plot*** Make a scatter plot using the lengths from List 1 as the x-values and the perimeters from List 3 as the y-values. Choose an appropriate viewing window. Then use the *trace* feature to see the coordinates of each point.

How does the graph show which of your rectangles from Step 1 has the smallest perimeter?



DRAW CONCLUSIONS **Use your observations to complete these exercises**

1. Repeat the steps above for rectangles with areas of 64 square units.
2. Based on the Explore and your results from Exercise 1, what do you notice about the shape of the rectangle with the smallest perimeter?

1.7 Find Perimeter, Circumference, and Area

Before You classified polygons.

Now You will find dimensions of polygons.

Why? So you can use measures in science, as in Ex. 46.

Key Vocabulary

- **perimeter,** *p. 923*
- **circumference,** *p. 923*
- **area,** *p. 923*
- **diameter,** *p. 923*
- **radius,** *p. 923*

Recall that *perimeter* is the distance around a figure, *circumference* is the distance around a circle, and *area* is the amount of surface covered by a figure. Perimeter and circumference are measured in units of length, such as meters (m) and feet (ft). Area is measured in square units, such as square meters (m^2) and square feet (ft^2).

KEY CONCEPT *For Your Notebook*

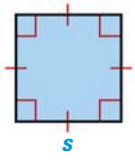
Formulas for Perimeter *P*, Area *A*, and Circumference *C*

Square

side length s

$P = 4s$

$A = s^2$

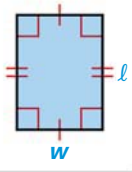


Rectangle

length ℓ and width w

$P = 2\ell + 2w$

$A = \ell w$

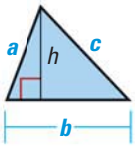


Triangle

side lengths a, b, and c, base b, and height h

$P = a + b + c$

$A = \frac{1}{2}bh$

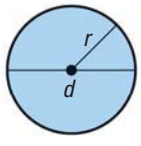


Circle

diameter d and radius r

$C = \pi d = 2\pi r$

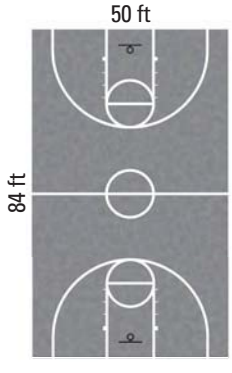
$A = \pi r^2$



Pi (π) is the ratio of a circle's circumference to its diameter.

EXAMPLE 1 Find the perimeter and area of a rectangle

BASKETBALL **Find the perimeter and area of the rectangular basketball court shown.**



Perimeter	Area
$P = 2\ell + 2w$	$A = \ell w$
$= 2(84) + 2(50)$	$= 84(50)$
$= 268$	$= 4200$

▶ The perimeter is 268 feet and the area is 4200 square feet.

EXAMPLE 2 Find the circumference and area of a circle

TEAM PATCH **You are ordering circular cloth patches for your soccer team's uniforms. Find the approximate circumference and area of the patch shown.**

APPROXIMATE π
The approximations 3.14 and $\frac{22}{7}$ are commonly used as approximations for the irrational number π. Unless told otherwise, use 3.14 for π.

Solution

First find the radius. The diameter is 9 centimeters, so the radius is $\frac{1}{2}(9) = 4.5$ centimeters.

Then find the circumference and area. Use 3.14 to approximate the value of π.

$$C = 2\pi r \approx 2(3.14)(4.5) = 28.26$$

$$A = \pi r^2 \approx 3.14(4.5)^2 = 63.585$$

▶ The circumference is about 28.3 cm. The area is about 63.6 cm^2.

GUIDED PRACTICE for Examples 1 and 2

Find the area and perimeter (or circumference) of the figure. If necessary, round to the nearest tenth.

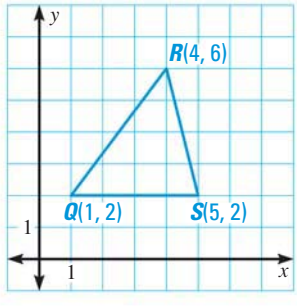
1. 
2. 
3. 
EXAMPLE 3 Standardized Test Practice

Triangle *QRS* has vertices *Q*(1, 2), *R*(4, 6), and *S*(5, 2). What is the approximate perimeter of triangle *QRS*?

Ⓐ 8 units Ⓑ 8.3 units Ⓒ 13.1 units Ⓓ 25.4 units

AVOID ERRORS
Write down your calculations to make sure you do not make a mistake substituting values in the Distance Formula.

Solution



First draw triangle *QRS* in a coordinate plane. Find the side lengths. Use the Distance Formula to find *QR* and *RS*.

$$QS = |5 - 1| = 4 \text{ units}$$

$$QR = \sqrt{(4-1)^2 + (6-2)^2} = \sqrt{25} = 5 \text{ units}$$

$$RS = \sqrt{(5-4)^2 + (2-6)^2} = \sqrt{17} \approx 4.1 \text{ units}$$

Then find the perimeter.

$$P = QS + QR + RS \approx 4 + 5 + 4.1 = 13.1 \text{ units}$$

▶ The correct answer is C. Ⓐ Ⓑ Ⓒ Ⓓ

EXAMPLE 4 Solve a multi-step problem

SKATING RINK An ice-resurfacing machine is used to smooth the surface of the ice at a skating rink. The machine can resurface about 270 square yards of ice in one minute.

About how many minutes does it take the machine to resurface a rectangular skating rink that is 200 feet long and 90 feet wide?

ANOTHER WAY
For an alternative method for solving the problem in Example 4, turn to page 57 for the **Problem Solving Workshop**.

Solution

The machine can resurface the ice at a rate of 270 square yards per minute. So, the amount of time it takes to resurface the skating rink depends on its area.

STEP 1 **Find** the area of the rectangular skating rink.

$$\text{Area} = \ell w = 200(90) = 18{,}000 \text{ ft}^2$$

The resurfacing rate is in square yards per minute. Rewrite the area of the rink in square yards. There are 3 feet in 1 yard, and $3^2 = 9$ square feet in 1 square yard.

$$18{,}000 \text{ ft}^2 \cdot \frac{1 \text{ yd}^2}{9 \text{ ft}^2} = 2000 \text{ yd}^2$$ Use unit analysis.

STEP 2 **Write** a verbal model to represent the situation. Then write and solve an equation based on the verbal model.

Let t represent the total time (in minutes) needed to resurface the skating rink.

Area of rink (yd^2)	=	Resurfacing rate (yd^2 per min)	×	Total time (min)

$$2000 = 270 \cdot t$$ Substitute.

$$7.4 \approx t$$ Divide each side by 270.

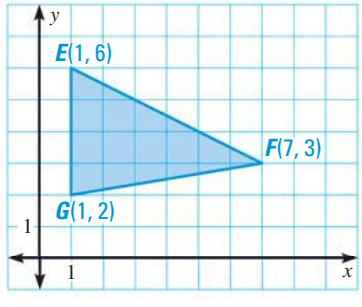
▶ It takes the ice-resurfacing machine about 7 minutes to resurface the skating rink.

GUIDED PRACTICE for Examples 3 and 4

4. Describe how to find the height from F to $\overline{EG}$ in the triangle at the right.

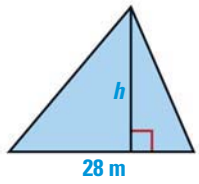
5. Find the perimeter and the area of the triangle shown at the right.

6. **WHAT IF?** In Example 4, suppose the skating rink is twice as long and twice as wide. Will it take an ice-resurfacing machine twice as long to resurface the skating rink? *Explain* your reasoning.



EXAMPLE 5 Find unknown length

The base of a triangle is 28 meters. Its area is 308 square meters. Find the height of the triangle.



Solution

$A = \frac{1}{2}bh$ — Write formula for the area of a triangle.

$308 = \frac{1}{2}(28)h$ — Substitute 308 for *A* and 28 for *b*.

$22 = h$ — Solve for *h*.

▸ The height is 22 meters.

GUIDED PRACTICE for Example 5

7. The area of a triangle is 64 square meters, and its height is 16 meters. Find the length of its base.

EXAMPLE 4 on p. 51 for Ex. 42

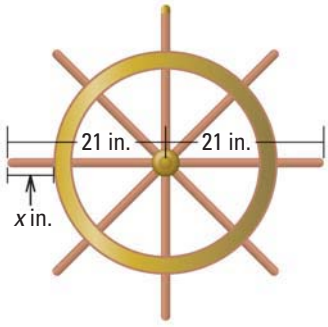
42. MULTI-STEP PROBLEM Chris is installing a solar panel. The maximum amount of power the solar panel can generate in a day depends in part on its area. On a sunny day in the city where Chris lives, each square meter of the panel can generate up to 125 watts of power. The flat rectangular panel is 84 centimeters long and 54 centimeters wide.

a. Find the area of the solar panel in square meters.

b. What is the maximum amount of power (in watts) that the panel could generate if its area was 1 square meter? 2 square meters? *Explain*.

c. Estimate the maximum amount of power Chris's solar panel can generate. *Explain* your reasoning.

43. MULTI-STEP PROBLEM The eight spokes of a ship's wheel are joined at the wheel's center and pass through a large wooden circle, forming handles on the outside of the circle. From the wheel's center to the tip of the handle, each spoke is 21 inches long.



a. The circumference of the outer edge of the large wooden circle is 94 inches. Find the radius of the outer edge of the circle to the nearest inch.

b. Find the length x of a handle on the wheel. *Explain*.

44. MULTIPLE REPRESENTATIONS Let x represent the length of a side of a square. Let y_1 and y_2 represent the perimeter and area of that square.

a. Making a Table Copy and complete the table.

Length, x	1	2	5	10	25
Perimeter, y_1	?	?	?	?	?
Area, y_2	?	?	?	?	?

b. Making a Graph Use the completed table to write two sets of ordered pairs: (x, y_1) and (x, y_2). Graph each set of ordered pairs.

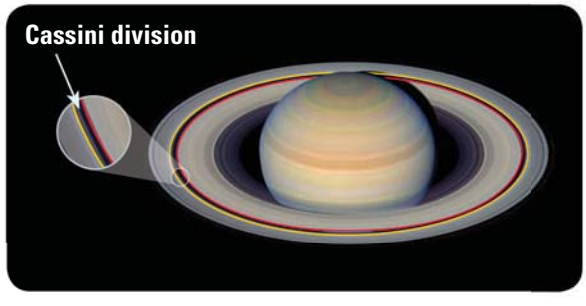
c. Analyzing Data *Describe* any patterns you see in the table from part (a) and in the graphs from part (b).

45. ★ EXTENDED RESPONSE The photograph at the right shows the Crown Fountain in Chicago, Illinois. At this fountain, images of faces appear on a large screen. The images are created by light-emitting diodes (LEDs) that are clustered in groups called modules. The LED modules are arranged in a rectangular grid.

a. The rectangular grid is approximately 7 meters wide and 15.2 meters high. Find the area of the grid.

b. Suppose an LED module is a square with a side length of 4 centimeters. How many rows and how many columns of LED modules would be needed to make the Crown Fountain screen? *Explain* your reasoning.

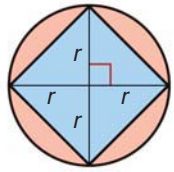
46. ASTRONOMY The diagram shows a gap in Saturn's circular rings. This gap is known as the *Cassini division*. In the diagram, the red circle represents the ring that borders the inside of the Cassini division. The yellow circle represents the ring that borders the outside of the division.



a. The radius of the red ring is 115,800 kilometers. The radius of the yellow ring is 120,600 kilometers. Find the circumference of the red ring and the circumference of the yellow ring. Round your answers to the nearest hundred kilometers.

b. Compare the circumferences of the two rings. About how many kilometers greater is the yellow ring's circumference than the red ring's circumference?

47. CHALLENGE In the diagram at the right, how many times as great is the area of the circle as the area of the square? *Explain* your reasoning.



48. xy ALGEBRA You have 30 yards of fencing with which to make a rectangular pen. Let x be the length of the pen.

a. Write an expression for the width of the pen in terms of x. Then write a formula for the area y of the pen in terms of x.

b. You want the pen to have the greatest possible area. What length and width should you use? *Explain* your reasoning.

MIXED REVIEW

PREVIEW
Prepare for Lesson 2.1 in Exs. 49–50.

49. Use the equation $y = 2x + 1$ to copy and complete the table of values. *(p. 884)*

x	1	2	3	4	5
y	?	?	?	?	?

50. Each number in a pattern is 6 less than the previous number. The first number in the pattern is 100. Write the next three numbers. *(p. 894)*

In Exercises 51 and 52, draw a diagram to represent the problem. Then find the indicated measure. *(p. 42)*

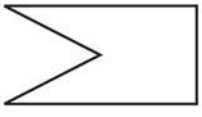
51. The lengths (in inches) of two sides of a regular triangle are given by the expressions $5x + 40$ and $8x - 13$. Find the length of a side of the triangle.

52. The measures of two angles of an equiangular hexagon are $12x°$ and $(10x + 20)°$. Find the measure of an angle of the hexagon.

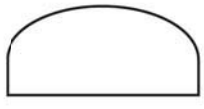
QUIZ *for Lessons 1.6–1.7*

Tell whether the figure is a polygon. If it is not, *explain* why. If it is a polygon, tell whether it is *convex* or *concave*. *(p. 42)*

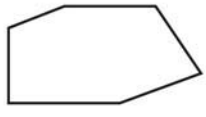
1.



2.

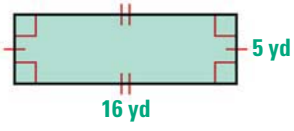


3.

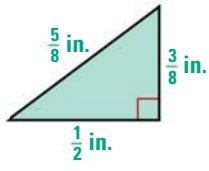


Find the perimeter and area of the shaded figure. *(p. 49)*

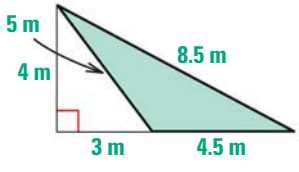
4.



5.



6.



7. GARDENING You are spreading wood chips on a rectangular garden. The garden is $3\frac{1}{2}$ yards long and $2\frac{1}{2}$ yards wide. One bag of wood chips covers 10 square feet. How many bags of wood chips do you need? *(p. 49)*

PROBLEM SOLVING WORKSHOP
LESSON 1.7

Using ALTERNATIVE METHODS

Another Way to Solve Example 4, page 51

MULTIPLE REPRESENTATIONS In Example 4 on page 51, you saw how to use an equation to solve a problem about a skating rink. *Looking for a pattern* can help you write an equation.

PROBLEM

SKATING RINK An ice-resurfacing machine is used to smooth the surface of the ice at a skating rink. The machine can resurface about 270 square yards of ice in one minute. About how many minutes does it take the machine to resurface a rectangular skating rink that is 200 feet long and 90 feet wide?

METHOD

Using a Pattern You can use a table to look for a pattern.

STEP 1 **Find** the area of the rink in square yards. In Example 4 on page 51, you found that the area was 2000 square yards.

STEP 2 **Make** a table that shows the relationship between the time spent resurfacing the ice and the area resurfaced. Look for a pattern.

Time (min)	Area resurfaced (yd^2)
1	$1 \cdot 270 = 270$
2	$2 \cdot 270 = 540$
t	$t \cdot 270 = A$

Use the pattern to write an equation for the area A that has been resurfaced after t minutes.

STEP 3 **Use** the equation to find the time t (in minutes) that it takes the machine to resurface 2000 square yards of ice.

$$270t = A$$
$$270t = 2000$$
$$t \approx 7.4$$

▶ It takes about 7 minutes.

PRACTICE

1. **PLOWING** A square field is $\frac{1}{8}$ mile long on each side. A tractor can plow about 180,000 square feet per hour. To the nearest tenth of an hour, about how long does it take to plow the field? (1 mi = 5280 ft.)

2. **ERROR ANALYSIS** To solve Exercise 1 above, a student writes the equation $660 = 180{,}000t$, where t is the number of hours spent plowing. *Describe* and correct the error in the equation.

3. **PARKING LOT** A rectangular parking lot is 110 yards long and 45 yards wide. It costs about \$.60 to pave each square foot of the parking lot with asphalt. About how much will it cost to pave the parking lot?

4. **WALKING** A circular path has a diameter of 120 meters. Your average walking speed is 4 kilometers per hour. About how many minutes will it take you to walk around the path 3 times?

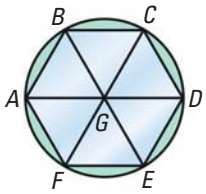
MIXED REVIEW of Problem Solving

STATE TEST PRACTICE
classzone.com

Lessons 1.4–1.7

1. **MULTI-STEP PROBLEM** You are covering the rectangular roof of a shed with shingles. The roof is a rectangle that is 4 yards long and 3 yards wide. Asphalt shingles cost \$.75 per square foot and wood shingles cost \$1.15 per square foot.
   - **a.** Find the area of the roof in square feet.
   - **b.** Find the cost of using asphalt shingles and the cost of using wood shingles.
   - **c.** About how much more will you pay to use wood shingles for the roof?

2. **OPEN-ENDED** In the window below, name a convex polygon and a concave polygon. Classify each of your polygons by the number of sides.



3. **EXTENDED RESPONSE** The diagram shows a decoration on a house. In the diagram, $\angle HGD$ and $\angle HGF$ are right angles, $m\angle DGB = 21°$, $m\angle HBG = 55°$, $\angle DGB \cong \angle FGC$, and $\angle HBG \cong \angle HCG$.

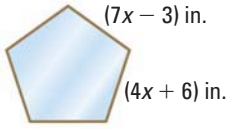
   - **a.** List two pairs of complementary angles and five pairs of supplementary angles.
   - **b.** Find $m\angle FGC$, $m\angle BGH$, and $m\angle HGC$. *Explain* your reasoning.
   - **c.** Find $m\angle HCG$, $m\angle DBG$, and $m\angle FCG$. *Explain* your reasoning.

4. **GRIDDED ANSWER** $\angle 1$ and $\angle 2$ are supplementary angles, and $\angle 1$ and $\angle 3$ are complementary angles. Given $m\angle 1$ is 28° less than $m\angle 2$, find $m\angle 3$ in degrees.

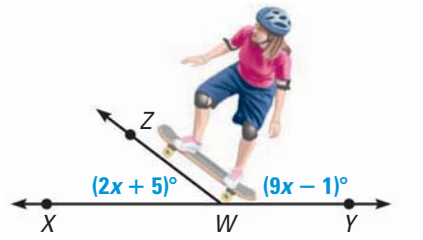
5. **EXTENDED RESPONSE** You use bricks to outline the borders of the two gardens shown below. Each brick is 10 inches long.

   - **a.** You lay the bricks end-to-end around the border of each garden. How many bricks do you need for each garden? *Explain*.
   - **b.** The bricks are sold in bundles of 100. How many bundles should you buy? *Explain*.

6. **SHORT RESPONSE** The frame of a mirror is a regular pentagon made from pieces of bamboo. Use the diagram to find how many feet of bamboo are used in the frame.



7. **GRIDDED ANSWER** As shown in the diagram, a skateboarder tilts one end of a skateboard. Find $m\angle ZWX$ in degrees.



8. **SHORT RESPONSE** Use the diagram below.

   - **a.** Find the perimeter of quadrilateral *ABCD*.
   - **b.** Find the area of triangle *ABC* and the area of triangle *ADC*. What is the area of quadrilateral *ABCD*? *Explain*.

1 CHAPTER SUMMARY

BIG IDEAS

For Your Notebook

Big Idea 1 Describing Geometric Figures

You learned to identify and classify geometric figures.

Point A

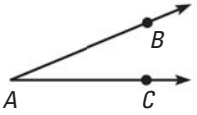
Line *AB* ($\overleftrightarrow{AB}$)

Plane *M*

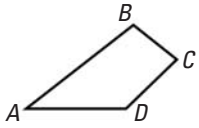
Segment *AB* ($\overline{AB}$)

Ray *AB* ($\overrightarrow{AB}$)

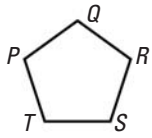
Angle *A*
($\angle A$, $\angle BAC$, or $\angle CAB$)



Polygon



Quadrilateral *ABCD*



Pentagon *PQRST*

Big Idea 2 Measuring Geometric Figures

SEGMENTS You measured segments in the coordinate plane.

Distance Formula

Distance between $A(x_1, y_1)$ and $B(x_2, y_2)$:

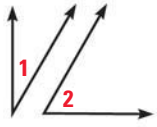
$$AB = \sqrt{(x_1 - x_2)^2 + (y_1 - y_2)^2}$$

Midpoint Formula

Coordinates of midpoint M of $\overline{AB}$, with endpoints $A(x_1, y_1)$ and $B(x_2, y_2)$:

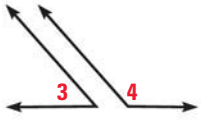
$$M\left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right)$$

ANGLES You classified angles and found their measures.



Complementary angles

$m\angle 1 + m\angle 2 = 90°$



Supplementary angles

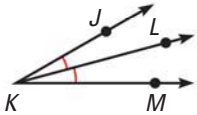
$m\angle 3 + m\angle 4 = 180°$

FORMULAS Perimeter and area formulas are reviewed on page 49.

Big Idea 3 Understanding Equality and Congruence

Congruent segments have equal lengths. Congruent angles have equal measures.

$\overline{AB} \cong \overline{BC}$ and $AB = BC$



$\angle JKL \cong \angle LKM$ and $m\angle JKL = m\angle LKM$

VOCABULARY EXERCISES

1. Copy and complete: Points A and B are the ? of $\overline{AB}$.
2. Draw an example of a *linear pair*.
3. If Q is between points P and R on $\overleftrightarrow{PR}$, and $PQ = QR$, then Q is the ? of $\overline{PR}$.

REVIEW EXAMPLES AND EXERCISES

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 1.

1.1 Identify Points, Lines, and Planes *pp. 2–8*

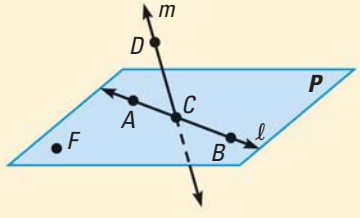
EXAMPLE

Use the diagram shown at the right.

Another name for $\overleftrightarrow{CD}$ is line m.

Points A, B, and C are collinear.

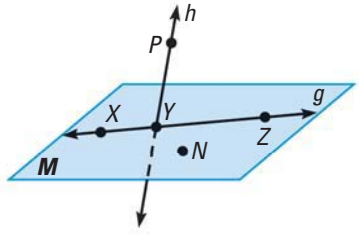
Points A, B, C, and F are coplanar.



EXAMPLES 1, 2, and 3 on pp. 3–4 for Exs. 4–8

EXERCISES

4. Give another name for line g.
5. Name three points that are *not* collinear.
6. Name four points that are coplanar.
7. Name a pair of opposite rays.
8. Name the intersection of line h and plane M.



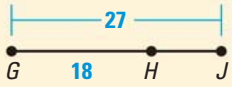
@HomeTutor
classzone.com
Chapter Review Practice

1.2 Use Segments and Congruence

pp. 9–14

EXAMPLE

Find the length of $\overline{HJ}$.



$GJ = GH + HJ$ **Segment Addition Postulate**

$27 = 18 + HJ$ **Substitute 27 for *GJ* and 18 for *GH*.**

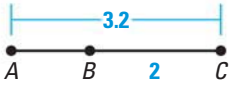
$9 = HJ$ **Subtract 18 from each side.**

EXERCISES

EXAMPLES 2, 3, and 4 on pp. 10–11 for Exs. 9–12

Find the indicated length.

9. Find AB.



10. Find NP.

11. Find XY.

12. The endpoints of $\overline{DE}$ are $D(-4, 11)$ and $E(-4, -13)$. The endpoints of $\overline{GH}$ are $G(-14, 5)$ and $H(-9, 5)$. Are $\overline{DE}$ and $\overline{GH}$ congruent? *Explain.*

1.3 Use Midpoint and Distance Formulas

pp. 15–22

EXAMPLE

$\overline{EF}$ has endpoints $E(1, 4)$ and $F(3, 2)$. Find (a) the length of $\overline{EF}$ rounded to the nearest tenth of a unit, and (b) the coordinates of the midpoint M of $\overline{EF}$.

a. Use the Distance Formula.

$$EF = \sqrt{(3 - 1)^2 + (2 - 4)^2} = \sqrt{2^2 + (-2)^2} = \sqrt{8} \approx 2.8 \text{ units}$$

b. Use the Midpoint Formula.

$$M\left(\frac{1 + 3}{2}, \frac{4 + 2}{2}\right) = M(2, 3)$$

EXERCISES

EXAMPLES 2, 3, and 4 on pp. 16–18 for Exs. 13–19

13. Point M is the midpoint of $\overline{JK}$. Find JK when $JM = 6x - 7$ and $MK = 2x + 3$.

In Exercises 14–17, the endpoints of a segment are given. Find the length of the segment rounded to the nearest tenth. Then find the coordinates of the midpoint of the segment.

14. $A(2, 5)$ and $B(4, 3)$

15. $F(1, 7)$ and $G(6, 0)$

16. $H(-3, 9)$ and $J(5, 4)$

17. $K(10, 6)$ and $L(0, -7)$

18. Point $C(3, 8)$ is the midpoint of $\overline{AB}$. One endpoint is $A(-1, 5)$. Find the coordinates of endpoint B.

19. The endpoints of $\overline{EF}$ are $E(2, 3)$ and $F(8, 11)$. The midpoint of $\overline{EF}$ is M. Find the length of $\overline{EM}$.

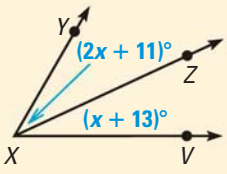
1 CHAPTER REVIEW

1.4 Measure and Classify Angles

pp. 24–32

EXAMPLE

Given that $m\angle YXV$ is 60°, find $m\angle YXZ$ and $m\angle ZXV$.



STEP 1 **Find** the value of x.

$m\angle YXV = m\angle YXZ + m\angle ZXV$ **Angle Addition Postulate**

$60° = (2x + 11)° + (x + 13)°$ **Substitute angle measures.**

$x = 12$ **Solve for x.**

STEP 2 **Evaluate** the given expressions when $x = 12$.

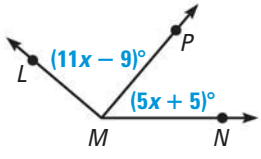
$m\angle YXZ = (2x + 11)° = (2 \cdot 12 + 11)° = 35°$

$m\angle ZXV = (x + 13)° = (12 + 13)° = 25°$

EXERCISES

EXAMPLES 3 and 5 on pp. 26, 28 for Exs. 20–21

20. In the diagram shown at the right, $m\angle LMN = 140°$. Find $m\angle PMN$.



21. $\overrightarrow{VZ}$ bisects $\angle UVW$, and $m\angle UVZ = 81°$. Find $m\angle UVW$. Then classify $\angle UVW$ by its angle measure.

1.5 Describe Angle Pair Relationships

pp. 35–41

EXAMPLE

a. $\angle 1$ and $\angle 2$ are complementary angles. Given that $m\angle 1 = 37°$, find $m\angle 2$.

$m\angle 2 = 90° - m\angle 1 = 90° - 37° = 53°$

b. $\angle 3$ and $\angle 4$ are supplementary angles. Given that $m\angle 3 = 106°$, find $m\angle 4$.

$m\angle 4 = 180° - m\angle 3 = 180° - 106° = 74°$

EXERCISES

EXAMPLES 2 and 3 on p. 36 for Exs. 22–31

$\angle 1$ and $\angle 2$ are complementary angles. Given the measure of $\angle 1$, find $m\angle 2$.

22. $m\angle 1 = 12°$ **23.** $m\angle 1 = 83°$ **24.** $m\angle 1 = 46°$ **25.** $m\angle 1 = 2°$

$\angle 3$ and $\angle 4$ are supplementary angles. Given the measure of $\angle 3$, find $m\angle 4$.

26. $m\angle 3 = 116°$ **27.** $m\angle 3 = 56°$ **28.** $m\angle 3 = 89°$ **29.** $m\angle 3 = 12°$

30. $\angle 1$ and $\angle 2$ are complementary angles. Find the measures of the angles when $m\angle 1 = (x - 10)°$ and $m\angle 2 = (2x + 40)°$.

31. $\angle 1$ and $\angle 2$ are supplementary angles. Find the measures of the angles when $m\angle 1 = (3x + 50)°$ and $m\angle 2 = (4x + 32)°$. Then classify $\angle 1$ by its angle measure.

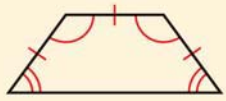
classzone.com
Chapter Review Practice

1.6 Classify Polygons

pp. 42–47

EXAMPLE

Classify the polygon by the number of sides. Tell whether it is equilateral, equiangular, or regular. *Explain*.



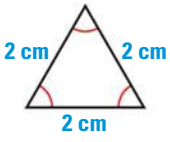
The polygon has four sides, so it is a quadrilateral. It is not equiangular or equilateral, so it is not regular.

EXERCISES

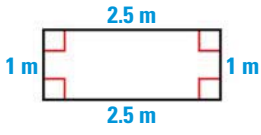
EXAMPLES 2 and 3 on pp. 43–44 for Exs. 32–35

Classify the polygon by the number of sides. Tell whether it is equilateral, equiangular, or regular. *Explain*.

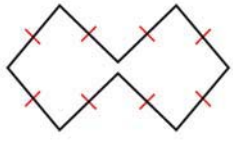
32.



33.



34.



35. Pentagon $ABCDE$ is a regular polygon. The length of $\overline{BC}$ is represented by the expression $5x - 4$. The length of $\overline{DE}$ is represented by the expression $2x + 11$. Find the length of $\overline{AB}$.

1.7 Find Perimeter, Circumference, and Area

pp. 49–56

EXAMPLE

The diameter of a circle is 10 feet. Find the circumference and area of the circle. Round to the nearest tenth.

The radius is half of the length of the diameter, so $r = \frac{1}{2}(10) = 5$ ft.

Circumference

$C = 2\pi r \approx 2(3.14)(5) = 31.4$ ft

Area

$A = \pi r^2 \approx 3.14(5^2) = 78.5$ ft^2

EXERCISES

EXAMPLES 1, 2, and 3 on pp. 49–50 for Exs. 36–40

In Exercises 36–38, find the perimeter (or circumference) and area of the figure described. If necessary, round to the nearest tenth.

36. Circle with diameter 15.6 meters

37. Rectangle with length $4\frac{1}{2}$ inches and width $2\frac{1}{2}$ inches

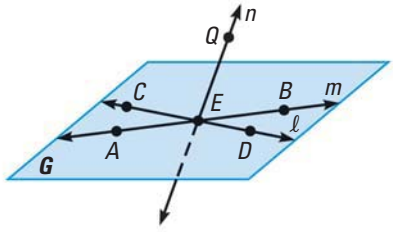
38. Triangle with vertices $U(1, 2)$, $V(-8, 2)$, and $W(-4, 6)$

39. The height of a triangle is 18.6 meters. Its area is 46.5 square meters. Find the length of the triangle's base.

40. The area of a circle is 320 square meters. Find the radius of the circle. Then find the circumference. Round your answers to the nearest tenth.

1 CHAPTER TEST

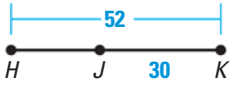
Use the diagram to decide whether the statement is *true* or *false*.



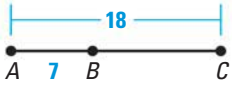
1. Point A lies on line m.
2. Point D lies on line n.
3. Points B, C, E, and Q are coplanar.
4. Points C, E, and B are collinear.
5. Another name for plane G is plane QEC.

Find the indicated length.

6. Find HJ.



7. Find BC.



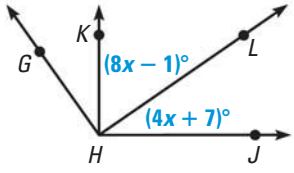
8. Find XZ.

In Exercises 9–11, find the distance between the two points.

9. $T(3, 4)$ and $W(2, 7)$
10. $C(5, 10)$ and $D(6, -1)$
11. $M(-8, 0)$ and $N(-1, 3)$

12. The midpoint of $\overline{AB}$ is $M(9, 7)$. One endpoint is $A(3, 9)$. Find the coordinates of endpoint B.
13. Line t bisects $\overline{CD}$ at point M, $CM = 3x$, and $MD = 27$. Find CD.

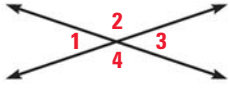
In Exercises 14 and 15, use the diagram.



14. Trace the diagram and extend the rays. Use a protractor to measure $\angle GHJ$. Classify it as *acute*, *obtuse*, *right*, or *straight*.
15. Given $m\angle KHJ = 90°$, find $m\angle LHJ$.

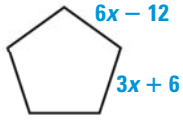
16. The measure of $\angle QRT$ is 154°, and $\overrightarrow{RS}$ bisects $\angle QRT$. What are the measures of $\angle QRS$ and $\angle SRT$?

In Exercises 17 and 18, use the diagram at the right.



17. Name four linear pairs.
18. Name two pairs of vertical angles.

19. The measure of an angle is 64°. What is the measure of its complement? What is the measure of its supplement?
20. A convex polygon has half as many sides as a concave 10-gon. Draw the concave polygon and the convex polygon. Classify the convex polygon by the number of sides it has.
21. Find the perimeter of the regular pentagon shown at the right.



22. **CARPET** You can afford to spend $300 to carpet a room that is 5.5 yards long and 4.5 yards wide. The cost to purchase and install the carpet you like is $1.50 per square foot. Can you afford to buy this carpet? *Explain*.

1 ALGEBRA REVIEW

Animated Algebra

SOLVE LINEAR EQUATIONS AND WORD PROBLEMS

EXAMPLE 1 Solve linear equations

Solve the equation $-3(x + 5) + 4x = 25$.

$-3(x + 5) + 4x = 25$ — **Write original equation.**

$-3x - 15 + 4x = 25$ — **Use the Distributive Property.**

$x - 15 = 25$ — **Group and combine like terms.**

$x = 40$ — **Add 15 to each side.**

EXAMPLE 2 Solve a real-world problem

MEMBERSHIP COSTS **A health club charges an initiation fee of $50. Members then pay $45 per month. You have $400 to spend on a health club membership. For how many months can you afford to be a member?**

Let n represent the number of months you can pay for a membership.

$\$400 = \text{Initiation fee} + (\text{Monthly Rate} \times \text{Number of Months})$

$400 = 50 + 45n$ — **Substitute.**

$350 = 45n$ — **Subtract 50 from each side.**

$7.8 = n$ — **Divide each side by 45.**

▶ You can afford to be a member at the health club for 7 months.

EXERCISES

EXAMPLE 1 for Exs. 1–9

Solve the equation.

1. $9y + 1 - y = 49$
2. $5z + 7 + z = -8$
3. $-4(2 - t) = -16$
4. $7a - 2(a - 1) = 17$
5. $\frac{4x}{3} + 2(3 - x) = 5$
6. $\frac{2x - 5}{7} = 4$
7. $9c - 11 = -c + 29$
8. $2(0.3r + 1) = 23 - 0.1r$
9. $5(k + 2) = 3(k - 4)$

EXAMPLE 2 for Exs. 10–12

10. **GIFT CERTIFICATE** You have a $50 gift certificate at a store. You want to buy a book that costs $8.99 and boxes of stationery for your friends. Each box costs $4.59. How many boxes can you buy with your gift certificate?

11. **CATERING** It costs $350 to rent a room for a party. You also want to hire a caterer. The caterer charges $8.75 per person. How many people can come to the party if you have $500 to spend on the room and the caterer?

12. **JEWELRY** You are making a necklace out of glass beads. You use one bead that is $1\frac{1}{2}$ inches long and smaller beads that are each $\frac{3}{4}$ inch long. The necklace is 18 inches long. How many smaller beads do you need?

1 ★ Standardized TEST PREPARATION

SHORT RESPONSE QUESTIONS

Scoring Rubric

Full Credit
- solution is complete and correct

Partial Credit
- solution is complete but has errors, *or*
- solution is without error but incomplete

No Credit
- no solution is given, *or*
- solution makes no sense

PROBLEM

You want to rent portable flooring to set up a dance floor for a party. The table below shows the cost of renting portable flooring from a local company. You want to have a rectangular dance floor that is 5 yards long and 4 yards wide. How much will it cost to rent flooring? *Explain* your reasoning.

If the floor area is . . .	Then the cost is . . .
less than 100 square feet	\$6.50 per square foot
between 100 and 200 square feet	\$6.25 per square foot

Below are sample solutions to the problem. Read each solution and the comments in blue to see why the sample represents full credit, partial credit, or no credit.

SAMPLE 1: Full credit solution

Find the area of the dance floor. Area $= \ell w = 5(4) = 20 \text{ yd}^2$.

Then convert this area to square feet. There are $3^2 = 9 \text{ ft}^2$ in 1 yd^2.

$$20 \text{ yd}^2 \cdot \frac{9 \text{ ft}^2}{1 \text{ yd}^2} = 180 \text{ ft}^2$$

Because 180 ft^2 is between 100 ft^2 and 200 ft^2, the price of flooring is \$6.25 per square foot. Multiply the price per square foot by the area.

$$\text{Total cost} = \frac{\$6.25}{1 \text{ ft}^2} \cdot 180 \text{ ft}^2 = \$1125$$

It will cost \$1125 to rent flooring.

The reasoning is correct, and the computations are accurate.

The answer is correct.

SAMPLE 2: Partial credit solution

The area of the dance floor is $5(4) = 20$ square yards. Convert this area to square feet. There are 3 feet in 1 yard.

$$20 \text{ yd}^2 \cdot \frac{3 \text{ ft}^2}{1 \text{ yd}^2} = 60 \text{ ft}^2$$

The flooring will cost \$6.50 per square foot because 60 ft^2 is less than 100 ft^2. To find the total cost, multiply the area by the cost per square foot.

$$60 \text{ ft}^2 \cdot \frac{\$6.50}{1 \text{ ft}^2} = \$390$$

It will cost \$390 to rent flooring.

The reasoning is correct, but an incorrect conversion leads to an incorrect answer.

SAMPLE 3: Partial credit solution

The computations and the answer are correct, but the reasoning is incomplete.

The area of the room is 180 ft^2, so the flooring price is \$6.25. The total cost is $180 \cdot 6.25 = \$1125$.

It will cost \$1125 to rent flooring.

SAMPLE 4: No credit solution

The student's reasoning is incorrect, and the answer is incorrect.

Floor area $= 4 \times 5 = 20$.

Cost $= 20 \times \$650 = \$13{,}000$.

It will cost \$13,000 to rent flooring.

PRACTICE Apply the Scoring Rubric

Use the rubric on page 66 to score the solution to the problem below as *full credit*, *partial credit*, or *no credit*. *Explain* your reasoning.

PROBLEM You have 450 daffodil bulbs. You divide a 5 yard by 2 yard rectangular garden into 1 foot by 1 foot squares. You want to plant the same number of bulbs in each square. How many bulbs should you plant in each square? *Explain* your reasoning.

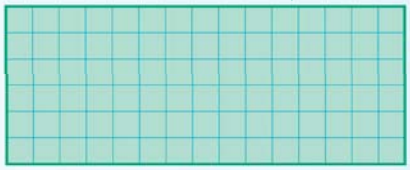
1. First find the area of the plot in square feet. There are 3 feet in 1 yard, so the length is 5(3) = 15 feet, and the width is 2(3) = 6 feet. The area is 15(6) = 90 square feet. The garden plot can be divided into 90 squares with side length 1 foot. Divide 450 by 90 to get 5 bulbs in each square.

2. The area of the garden plot is 5(2) = 10 square yards. There are 3 feet in 1 yard, so you can multiply 10 square yards by 3 to get an area of 30 square feet. You can divide the garden plot into 30 squares. To find how many bulbs per square, divide 450 bulbs by 30 to get 15 bulbs.

3. Divide 450 by the area of the plot: 450 bulbs ÷ 10 yards = 45 bulbs. You should plant 45 bulbs in each square.

4. Multiply the length and width by 3 feet to convert yards to feet. The area is 15 ft × 6 ft = 90 ft^2. Divide the garden into 90 squares.

Diagram of garden plot

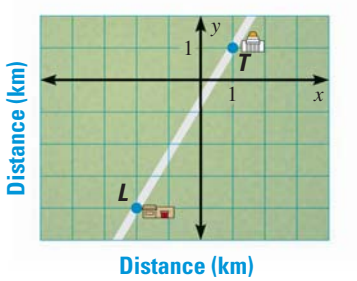


1 ★ Standardized TEST PRACTICE

SHORT RESPONSE

1. It costs $2 per square foot to refinish a hardwood floor if the area is less than 300 square feet, and $1.75 per square foot if the area is greater than or equal to 300 square feet. How much does it cost to refinish a rectangular floor that is 6 yards long and 4.5 yards wide? *Explain* your reasoning.

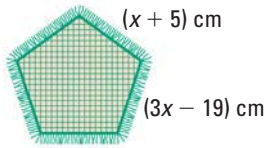
2. As shown below, the library (point L) and the Town Hall (point T) are on the same straight road. Your house is on the same road, halfway between the library and the Town Hall. Let point H mark the location of your house. Find the coordinates of H and the approximate distance between the library and your house. *Explain* your reasoning.



3. The water in a swimming pool evaporates over time if the pool is not covered. In one year, a swimming pool can lose about 17.6 gallons of water for every square foot of water that is exposed to air. About how much water would evaporate in one year from the surface of the water in the pool shown? *Explain* your reasoning.

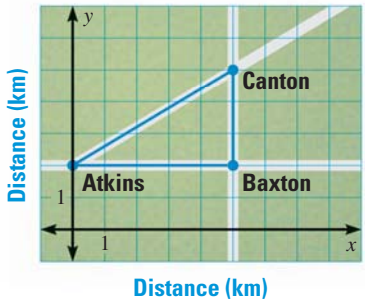
4. A company is designing a cover for a circular swimming pool. The diameter of the pool is 20 feet. The material for the cover costs $4 per square yard. About how much will it cost the company to make the pool cover? *Explain* your reasoning.

5. You are making a mat with a fringed border. The mat is shaped like a regular pentagon, as shown below. Fringe costs $1.50 per yard. How much will the fringe for the mat cost? *Explain* your reasoning.

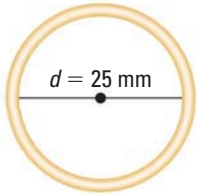


6. Angles A and B are complementary angles, $m\angle A = (2x - 4)°$, and $m\angle B = (4x - 8)°$. Find the measure of the supplement of $\angle B$. *Explain* your reasoning.

7. As shown on the map, you have two ways to drive from Atkins to Canton. You can either drive through Baxton, or you can drive directly from Atkins to Canton. About how much shorter is the trip from Atkins to Canton if you do not go through Baxton? *Explain* your reasoning.



8. A jeweler is making pairs of gold earrings. For each earring, the jeweler will make a circular hoop like the one shown below. The jeweler has 2 meters of gold wire. How many pairs of gold hoops can the jeweler make? *Justify* your reasoning.



MULTIPLE CHOICE

9. The midpoint of $\overline{AB}$ is $M(4, -2)$. One endpoint is $A(-2, 6)$. What is the length of $\overline{AB}$?

Ⓐ 5 units

Ⓑ 10 units

Ⓒ 20 units

Ⓓ 28 units

10. The perimeter of a rectangle is 85 feet. The length of the rectangle is 4 feet more than its width. Which equation can be used to find the width w of the rectangle?

Ⓐ $85 = 2(w + 4)$

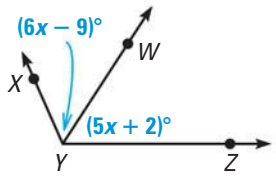
Ⓑ $85 = 2w + 2(w - 4)$

Ⓒ $85 = 2(2w + 4)$

Ⓓ $85 = w(w + 4)$

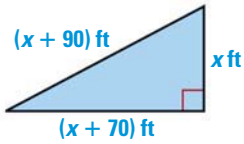
GRIDDED ANSWER

11. In the diagram, $\overrightarrow{YW}$ bisects $\angle XYZ$. Find $m\angle XYZ$ in degrees.



12. Angles A and B are complements, and the measure of $\angle A$ is 8 times the measure of $\angle B$. Find the measure (in degrees) of the supplement of $\angle A$.

13. The perimeter of the triangle shown is 400 feet. Find its area in square feet.



EXTENDED RESPONSE

14. The athletic director at a college wants to build an indoor playing field. The playing field will be twice as long as it is wide. Artificial turf costs \$4 per square foot. The director has \$50,000 to spend on artificial turf.

a. What is the largest area that the director can afford to cover with artificial turf? *Explain*.

b. Find the approximate length and width of the field to the nearest foot.

15. An artist uses black ink to draw the outlines of 30 circles and 25 squares, and red ink to fill in the area of each circle and square. The diameter of each circle is 1 inch, and the side length of each square is 1 inch. Which group of drawings uses more black ink, the *circles* or the *squares*? Which group of drawings uses more red ink? *Explain*.

16. Points A and C represent the positions of two boats in a large lake. Point B represents the position of a fixed buoy.

a. Find the distance from each boat to the buoy.

b. The boat at point A travels toward the buoy in a straight line at a rate of 5 kilometers per hour. The boat at point C travels to the buoy at a rate of 5.2 kilometers per hour. Which boat reaches the buoy first? *Explain*.
